CORTEM GROUP

To be sure to be safe

Since 1968 Cortem S.p.A. has been designing and manufacturing protected electrical equipment intended for installation in areas at risk of explosion and fire. Thanks to constant technological innovation and continuous improvement, today it is a leading company in the industry, able to offer a wide range of solutions suitable for on-shore and off-shore applications.

The special feature of Cortem Group - which includes the Cortem, Elfit e Fondisonzo brands - consists in its long-standing experience accrued in the sector, resulting in the ability to not merely supply Ex products, but custom-made solutions as well. All of our products are designed and manufactured in-house with various protection methods such as 'Ex d' explosion proof, 'Ex e' enhanced safety, 'Ex de' mixed, 'Ex n' no sparking, using aluminium alloy, stainless steel and top quality plastics materials. The aluminium alloy used by Cortem has exceeded the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests). All our aluminium alloy products are protected by RAL 7035 polyester coating. This treatment is a Cortem Group exclusive and ensures long-term protection. Cortem Group's production may be summarised as follows:

- lighting fixtures, obstruction signalling lighting fixtures, portable lamps and projectors.
- Enclosures for shunting and pulling, push button panels.
- Signalling and control equipment, sockets and plugs.
- Cable glands and fittings.
- Special designs: electrical panels and control batteries according to customer's specifications.

90% of our production is intended for the Oil & Gas sector, both off-shore and on-shore, but also chemical and pharmaceutical industries, as well as all those process areas characterised by the presence of explosive atmospheres such as grain silos, wood mills and paper mills. Every year we invest part of our resources in developing innovative products to address the market's needs. That is why our R&D department devises the best solutions considering regulatory, installation, safety and market price aspects. With over 30 agencies, 90 distributors, 7 partners and 3 de-centralised production facilities, Cortem assures a qualified local presence in the world. Cortem deems 'de-localising' does not mean transferring plants, means, know-how and resources to low-cost Countries, but rather replicating a winning model of industrial organisation where environmental

safety, product quality, compliance with standards, technical support and market after-sale support are the foundations of our Corporate Mission. The Pay Off "to be sure to be safe" represents the pride and passion for what we design and produce.

Il Pay Off "to be sure to be safe" rappresenta l'orgoglio e la passione verso ciò che progettiamo e produciamo.

QUALITY AND ENVIRONMENTAL MANAGEMENT SYSTEM

The unquestionable quality of our explosion proof products and automated production systems is one of the principles that lead the activity of Cortem Group in order to ensure both the safety of persons and of the environment.

The production process, entirely managed in-house, is controlled by a Certified Quality System according to the requirements of UNI EN 9001:2008 Rule, providing Quality Plans expressly set for the design, production, control and service of such equipment, constantly checked by a well defined body. The production facilities and production procedures also comply with the standards of international Rule UNI EN ISO 14001:2004 on the Environmental Management System.

CERTIFICATIONS

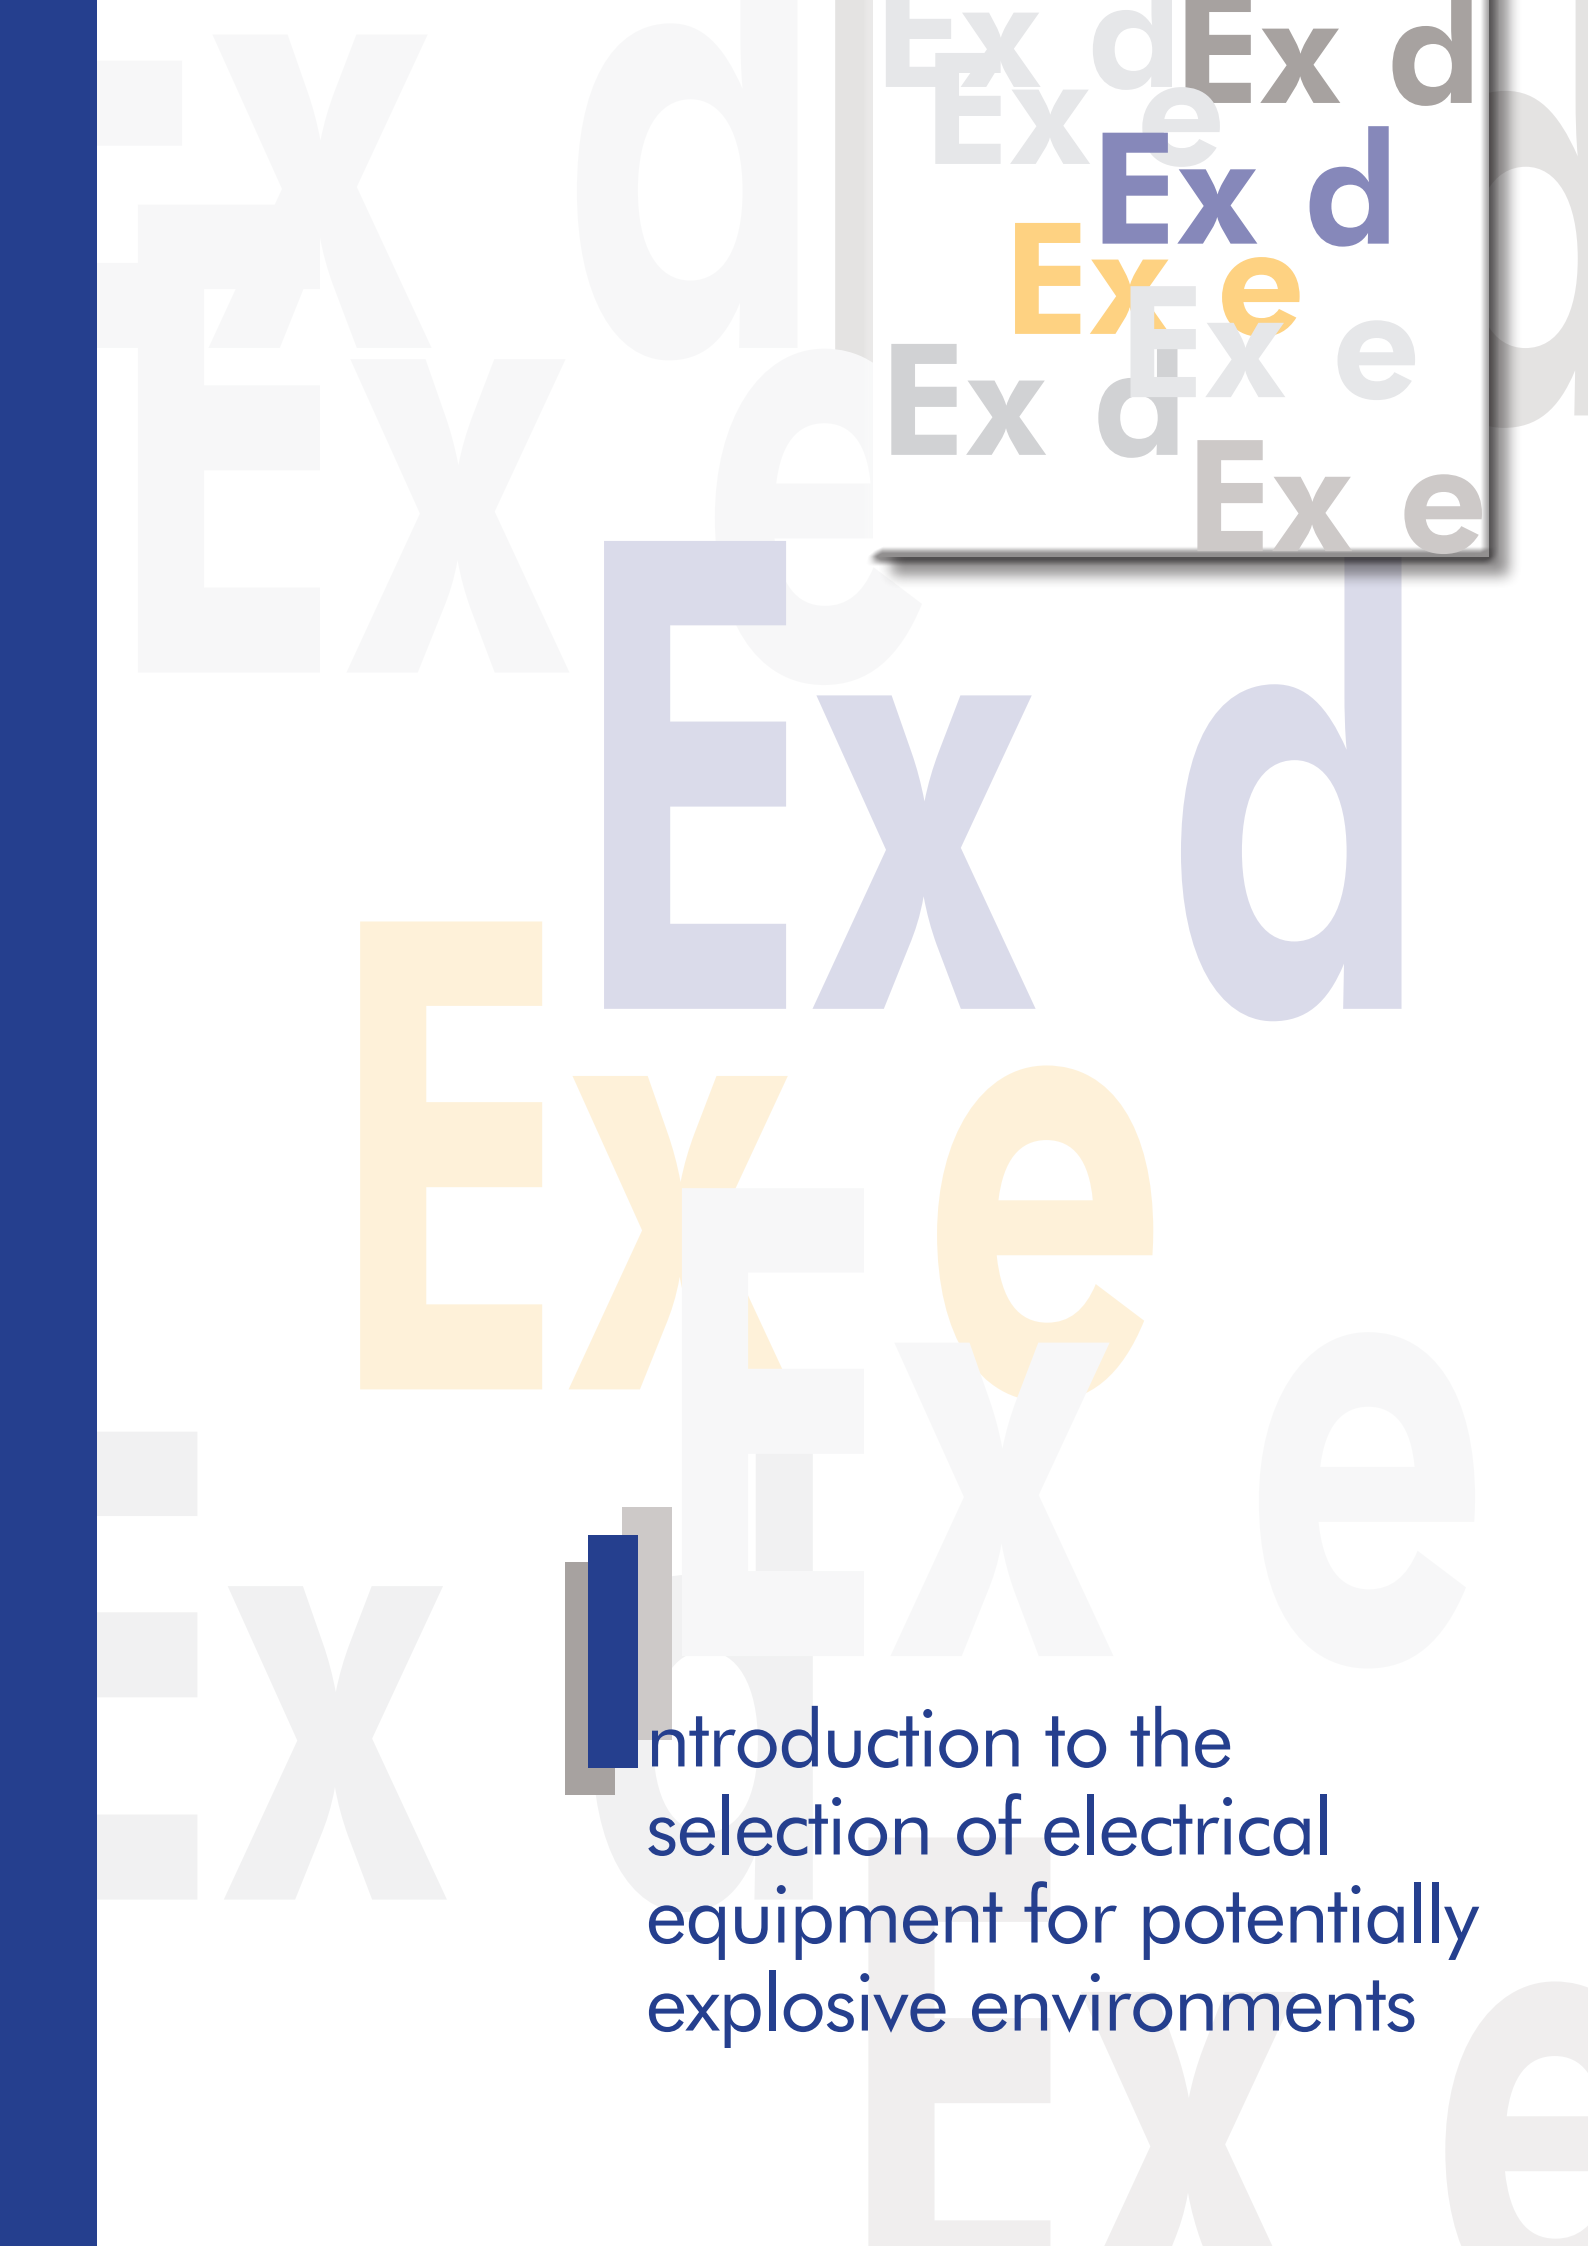

All our products are certified according to European ATEX standards, to international IEC Ex rules and the regulatory process for compliance with the provisions of the Customs Union formed by Belarus, Kazakhstan and the Russian Federation (GOST TR CU) is ongoing. The respect of these strict construction standards guarantee the safety of those who work daily on plants and the environmental protection of the workplace.

THE "NO FAKE" PROJECT

CORTEM Group ensures the quality and authenticity of its products and fight the distribution of imitations and fakes on the international market through the "No fake" project. The authenticity of the products is guaranteed by the application of an adhesive label that, by 2015, is square in shape, with 3D matrix, alphanumeric code and reading QR code for use with your smart phone. The correctness of the alphanumeric code can be verified on Cortem web-site www.cortemgroup.com.

Introduction to the
selection of electrical
equipment for potentially
explosive environments

1.1

The classification of areas at risk of explosion (EN 60079-10)

In industrial plants such as oil, chemical, petrochemical, and generally in places with potentially explosive atmosphere and during storage and processing, it is possible that flammable substances such as gas, gaseous liquids and explosive dusts, are emitted in the atmosphere, generating the "bubbles" that, depending on their specific weight, may deposit on the ground or remain volatile rising upwards, with a concentration in risk of explosion if ignited by an external ignition source such as simple ambient temperature or overheating of the equipment if not properly sized. It is therefore essential to install in such environments suitable metal or non-metal powerboard-fitted equipment, in order to prevent itself, if not properly sized, from being an additional source of ignition for a likely explosion. Think of being in a potentially explosive plant in which you should install suitable devices able to operate even in the presence of gas and/or dust posing the risk of explosion and try to consider what would be the appropriate equipment for the purpose:

1. Understand how to be present and able to fully operate in managing that plant and/or part of it.
2. Optimize the human resources for such a management task.
3. Assess the impact on the maintenance of the equipment that will be installed to operate in the plant.

The above analysis leads us to the logic conclusion that, in order to operate safely, it is essential that the equipment and materials to be installed must be manufactured and tested to withstand, without being subject to permanent

deformation, electro-mechanical stresses arising not only from explosions, but also from the effects caused by possible short circuits of electrical devices they are fitted with.

Cortem Group, consistently aligned to reference standards, both in the field of explosion-proof products, both in the industrial sector, pays the utmost attention and care in the design and manufacture of its electrical equipment.

2. The construction specifications

All equipment suitable for the use above mentioned, should be subject to specific regulations within the EU, such as EN 60079-0, EN 60079-1, EN 60079-7 etc., internationally the IEC 60079-0, IEC 60079-1, IEC 60079-7 and other specific regulations for other Countries such as Russia (GOST TR CU), Brazil (INMETRO), South Korea (COSA) etc...

The construction specifications, possible with our equipment and that are closest to the provisions of the industrial standard EN 61439, are shown below as an example of assembly.

Fig 2. Construction specification comparable to Assembly 1 EN 2-61439 corresponding to the direct input type (Ex d) referred to as "Single device enclosing all features (no internal segregation)"

Fig 3. Construction specification comparable to Assembly 4 EN 61439-2, corresponding to the direct input type (Ex d) referred to as "Terminals installed in the specific board, as connected functional unit"

Fig 5. Construction specification comparable to Assembly 4b EN 61439-2, with mounting structure, corresponding to the indirect input type (Ex de) referred to as "Terminals not installed in the specific board, as connected functional unit, with added mounting structure"

3. How to choose the correct electrical equipment

Great now the characteristics our enclosures must have to be suitable to be installed in potentially explosive environments, thereby complying with the standards EN 60079-... types are divided into the following construction design:

- explosion proof mounting IM2 Ex d I Mb (only for stainless steel junction boxes), according to standard EN 60079-1;
- explosion proof mounting II2G Ex d MB T..Gb or Ex d IIB + H₂ T.. Gb, according to standard EN 60079-1;
- explosion proof mounting II2G Ex de MB T ... Gb or Ex de MB + H₂ T.. Gb according to the norm EN 60079-1 and EN 60079-7;
- explosion proof execution II 2GD Ex d MB T ... Gb or Ex d MB + H₂ T.. Gb, according to standard EN 60079-1;
- explosion proof mounting II2GD Ex de MB T.. Gb or Ex de MB + H₂ T.. Gb according to the norm EN 60079-1 and EN 60079-7;
- explosion proof mounting II2GD Ex d MC T.. Gb, according to standard EN 60079-1;
- explosion proof mounting II2GD Ex de MC T.. Gb, according to standard EN 60079-1 and EN 60079-7;
- explosion proof mounting Ex tb IIIC Db, according with standard EN 60079-1 ie EN 60079-31;
- increased safety mounting Ex and II, according with standard EN 60079-7.

To chose the equipment (excluding the cable glands and conduits), you must have the following information:

- a Classification of hazardous environments, including requirements for equipment protection level. *This classification is the responsibility of the plant designer.*
- b Classification depending on the group or subgroup of electrical device due

3.....

How to choose the correct electrical equipment

to the presence of gas, vapours or dust. *This classification is the responsibility of the plant designer.*

- c Temperature class or ignition temperature of gas or vapour concerned. *This assessment is the responsibility of the plant designer.*
- d The minimum ignition temperature of combustible dust cloud, minimum ignition temperature of combustible dust and the minimum ignition energy of combustible dust cloud. *This assessment is the responsibility of the plant designer.*
- e External influences and workplace ambient temperature. *This assessment is the responsibility of the plant designer.*

The choice, considering the equipment protection levels (EPL) and the zones, when the classification drawings only include the zones, must be made as indicated in Table 1 below (entirely derived from standard EN 60079-14).

Our equipment, suitable for Zones 1-2 and 21-22, can be used even in places that require an EPL "Gb" OR "Db", depending on the presence of gas or dust. The choice of the temperature class depends on the ignition temperature of gas or vapours in which the equipment must be installed. The choice must be made according to what is shown in Table 2 derived from standard EN 60079-14. Temperature limitations, due to the presence of dust clouds, can cause two events: the reduction of the minimum ignition temperature when the thickness of the dust layer or of the thermal insulation increase, resulting in overheating of the enclosure and thus a lower heat inside/outside efficiency transfer. Therefore, it is crucial that possible thicknesses are highlighted, in order to make a correct sizing.

Table 1 Relationship between equipment protection levels (EPL) and Zones

Zone	Equipment protection level (EPL)
0	"Ga"
1	"Ga" or "Gb"
2	"Ga" or "Gb" or "Gc"
20	"Da"
21	"Da" or "Db"
22	"Da" or "Db" or "Dc"

Table 2 Relationship between temperature class and ignition temperature (Table 4, standard EN 60079-14)

Required temperature class of the classification of places	Ignition temperature of gases or vapours expressed in °C	Acceptable temperature classes for equipment
T1	> 450	from T1 to T6
T2	> 300	from T2 to T6
T3	> 200	from T3 to T6
T4	> 135	from T4 to T6
T5	> 100	from T5 to T6
T6	> 85	T6

4.1

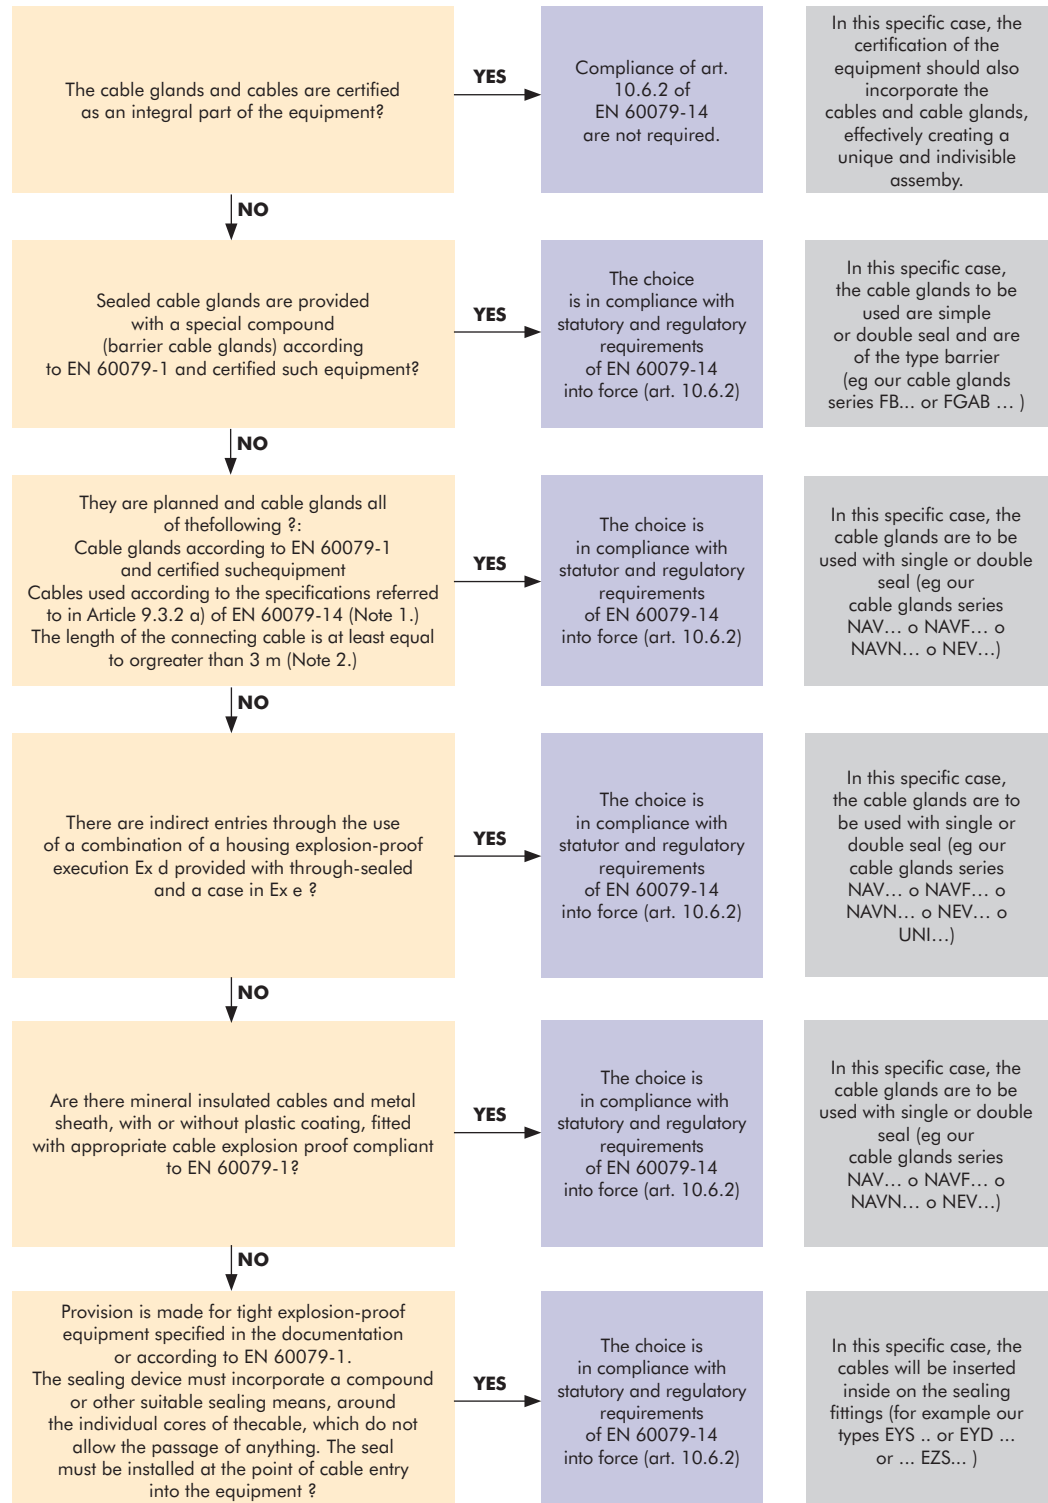

The choice of cables input / output systems from explosion proof enclosures

The choice of cables input / output systems from explosion proof enclosures must comply with the requirements of EN 60079-14 standard in particular:

- 4.1 Cables with sheaths with low tensile strength, known as "easy tear" cables, must not be used in areas with risk of explosion if not installed in conduit. Thermoplastic wire of the type in polyvinyl chloride (PVC) with a tensile strength of 2.5 N / mm², polyethylene with a tensile strength of 15.0 N/mm² and cables elastomeric polychloroprene or chlorosulfonated or polyethylene or similar polymers with a tensile strength of 15.0 N/mm², cables are commonly classified as "easy tear".
- 4.2 The cables for fixed installations must be suitable to the environmental conditions and must be sheathed in thermoplastic, thermosetting or elastomeric material and mineral insulated metal sheathed.
- 4.3 When there is the possibility of gas or vapor transfer through the interstices between the individual cores (conductor) of a cable, to a non-hazardous zone or to areas with different explosion hazard, the construction and the use of the cable must be designed in order to avoid the flame propagation (See Note 2 in Figure 6).
- 4.4 When it's not applicable as described in paragraph 4.3 above, must be used mineral insulated cables, with sealing, for example with barrier cable glands of our FGAB ... series.
- 4.5 The cable glands must be properly selected depending on the specific cable diameter. It's not allowed the use of sealing tapes, thermo-tightening or other materials such as fillers for the achievement of the seal diameter on the cable gland.
- 4.6 The choice of the cable glands must comply with the provisions of Section 10.6.2 of EN 60079-14 standard that are summarized in the Figure 6.

4. The choice of cables input / output systems from explosion proof enclosures

Fig. 6 Flowchart for a proper selection of cable entry systems in Ex d explosion proof enclosures

Note 1. With a sheath in thermoplastic material, thermosetting or elastomeric. They must be circular and compact.

Any padding or sheathing must be extruded. Any fillers must be non-hygroscopic.

Note 2. The minimum cable length is defined in order to limit the potential danger due to the transmission of flame through the cable. For the test procedures of restricted breathing cable (Appendix E, extracted from EN 60079-14), you have to take a piece of cable with a length of 0.5 m should be tried, once installed in a sealed 5 liters (± 0.2 liters), in conditions of constant temperature. The cable is considered acceptable if the interval of time required to bring down to 0.15 kPa (15 mm of water column) an internal overpressure of 0.3 kPa (30 millimeters of water column) is equal to or greater 5 s.

5.C

Conduit and cable systems

It is also very important to check the coupling system among several enclosures that, unlike industrial equipment (complying with EN 61439 ...), requires you to put between two junction boxes specific locking joints to avoid the propagation of an explosion should accidentally occur in one of them. As you can see from the images below, the lack of locking joints causes not only the transfer of the explosion to the adjacent junction box, but also generates an increase in pressure caused by the explosion, resulting in a greater risk of injury.

The standard EN 60079-1, in section 13.5.3 reads *"The distance from the surface of the seal system closest to the junction box (or of the junction box) and*

the outer wall of the junction box (or of the junction box scheduled for end use) should be as small as possible, but in no case be greater than the size of the conduit or, choosing the smaller between the two values", then the locking joint, in order to ensure the correct operation, should be positioned in the immediate vicinity of the junction box, as pointed out in section 14.4 of standard EN 60079-14, which says "The sealing devices for protective tubes must be provided, or as part of the explosion proof enclosure, or immediately

5. Conduit and cable systems

Ex d
Ex e
Ex c
Ex b
Ex a

or as close as possible to the entrance of the explosion proof enclosure, using the minimum number of accessories".

In the *conduit*, electrical cables or electrical conductors run inside a hard sealed tube system and the access into explosion-proof enclosures occurs through a sealed locking joint which prevents any accidental explosion from expanding and propagating inside the pipe system (Fig. 7). Outside each of "Ex d" box powerboard, therefore, is a sealed locking joint which prevents explosions from spreading to other sectors, defines the volume of the electric "Ex d" assembly to a value for which it has been tested and separates the part of cable electrical installation in any system made with exposed cable. The cable plant provides the conductors placed inside of a threaded "freez moon" tube and a fitting with locking joint; such locking fittings must be filled with appropriate mixture. This method effectively protects cables against mechanical and chemical damage. Among its flaws, however, we highlight that possible problems may arise in any subsequent change may be made to the system wiring.

Fig. 7 shows an example of a plant built with pipe and mounting locking joints. The cable plant, using special cable glands, can be made with direct input, or with indirect input.

Fig. 7 Example of cable plant system. Between one junction box and the other case you notice the locking joints

Ex d 5. Conduit and cable systems

In the *cable plant* with direct input, (Fig. 8) the cable glands are directly fixed on one or more walls of the "Ex d" junction box and, thanks to their characteristics, achieve the same degree of segregation of the locking joint, with the advantage that they can be overhauled (i.e. if cable replacement is required). In the cable plant with indirect input (Fig. 9) the cable glands will be those with increased safety, type "Ex e" and will be fixed on one or more walls of the "Ex e" running junction box. The passage between the "Ex e" junction box and the "Ex d" one occurs via sealed joints.

Fig. 8 Example of cable plant with direct input

Fig. 9 Example of cable plant with indirect input

6. Compliance with industrial standards (Low Voltage Directive)

In addition to the herein aforementioned regulations, taking into account all issues related to construction specifications for equipment suitable to operate with possibly explosive substances, Cortem Group uses components that fully correspond to industrial regulations such as EN 61439-1 and EN 61439-2 relating to the design concepts of electrical equipment. In fact standard EN 61439-1, defines the different classifications for electrical panels, classifications which depend on several factors, such as:

- type of assembly;
- external configuration;
- segregation way;

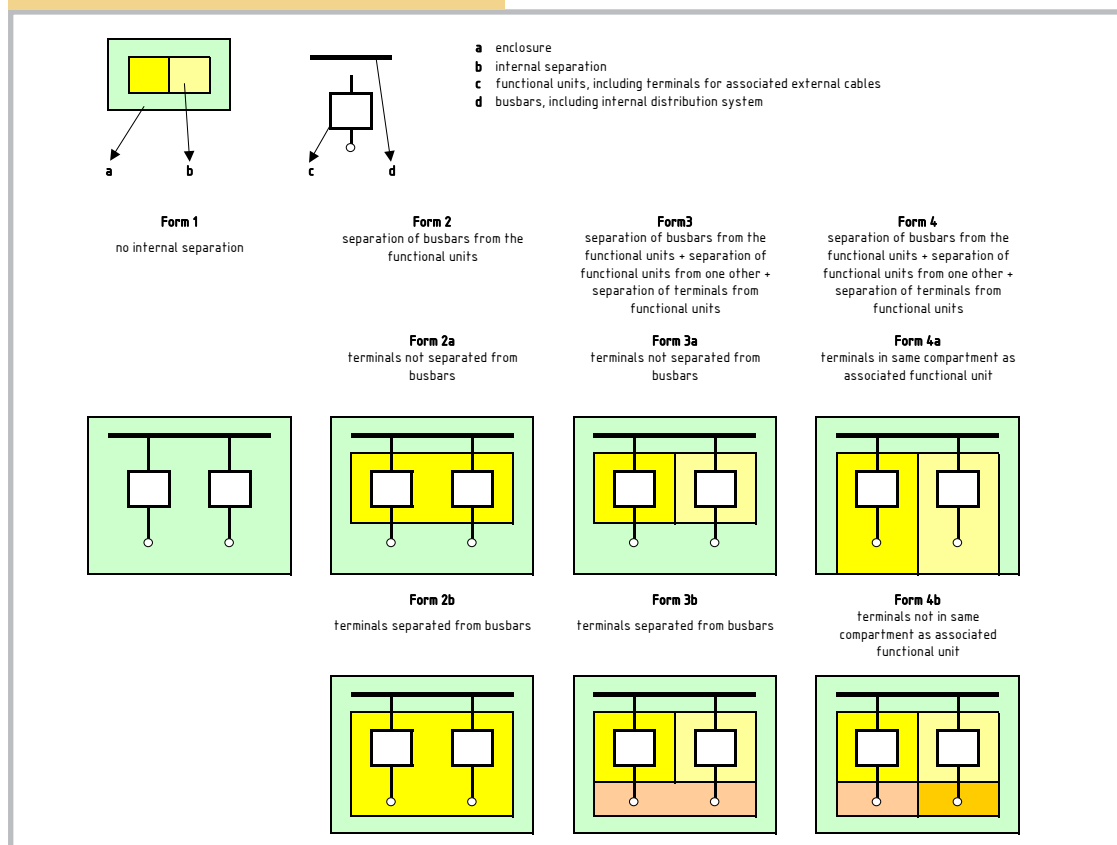

The type of construction, according to standard EN 61439-1, makes a distinction between open-type powerboards, (not applicable for environment posing risk of explosion) and closed type, the latter suitable as they include protected panels and/or seals on all sides of the enclosures.

External configuration is divided into:

- Cabinet (column), used for larger appliances (not applicable for environments "Ex d" with explosion risk when running).
- Board, used for controlling machines or complex systems (not applicable for environments "Ex d" with explosion risk when running).
- Box powerboard, characterized by wall-mounting. These are used primarily for distribution at the department level or area in industrial environments.
- Multiple box powerboards, i.e. the combination of more than one powerboards, usually sealed and with coupling fittings, each containing a functional unit that can be one or more breakers, a starter, a complete socket lock switch or protection one. This way you get a system of box powerboards mechani-

Exd 6. Compliance with industrial standards (Low Voltage Directive)

Fig. 10 Types of switchboards according to the segregation types

cally joined together, with or without a common mounting structure. The electrical connections between adjacent units pass through junctions made on adjacent sides.

The switchboards are distinguished by the type of segregation Fig. 10, (derived from standard EN 61439-2).

In addition to all the tests necessary for obtaining product certification, according to EN 60079-1 as certifications issued by external certification body and with proven reliability and accredited both nationally and internationally, Cortem Group checks all the components that will be installed inside its equipment, adopting all testing and verification criteria set out in the reference standard (Fig. 11).

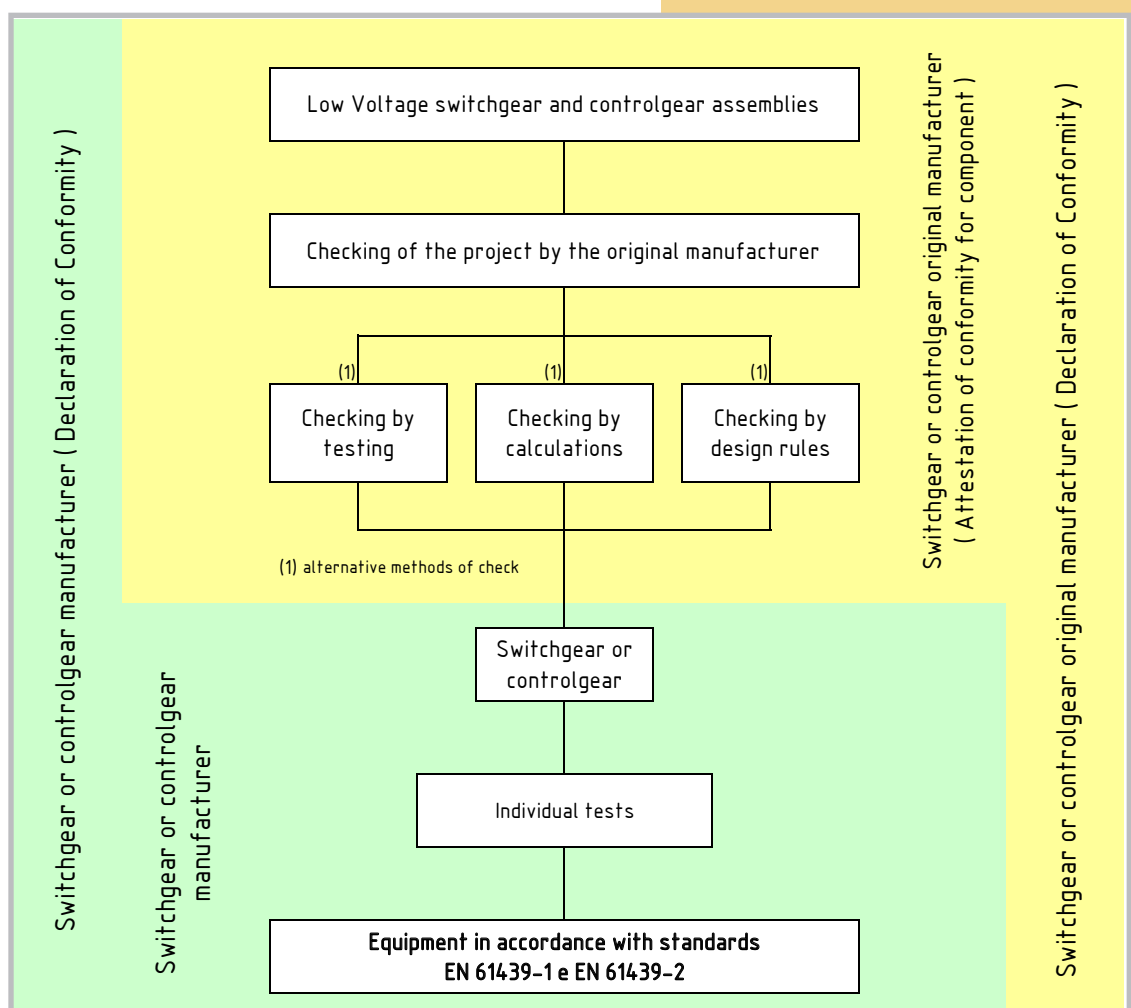

As required by reference standards EN 60079-0, it is the manufacturer's responsibility to issue a document stating the full compliance of systems it will produce, by adopting all the sizing criteria of good engineering and strictly providing the maximum allowable dissipation power values (W), following test reports annex-

6. Compliance with industrial standards (Low Voltage Directive)

es to the certificate of compliance. However, Cortem Group, always attentive to market demands, is able to provide equipment with certificate of conformity of the component but, in this specific case, it will be the responsibility of the manufacturer of the assembly to provide its full certification of compliance.

Therefore, after building the system, for all concerning standards EN 60079-... and standards EN 61439-..., in accordance with the above-mentioned regulations, the manufacturer of the powerboard is required to turn to the certification body, for running the explosion-proof testing, in order to issue the Declaration of conformity and mount the relevant plate stating the certification obtained.

Fig. 11 Typical flowchart for the certification

7

Implications and risks deriving from the modification of explosion proof enclosures

In Europe, manufacturers of explosion proof enclosures and end users must take two directives into account: Directive 2014/34/EU, governing the production of protection equipment and systems destined to be used in potentially explosive atmospheres (ATEX), and, as far as end users are concerned, Directive 1999/92/EC "Risks from Explosive Atmospheres" outlining and harmonising the requirements to improve the health and safety of the workers exposed to the risk of explosive atmospheres. It is important for designers, installers and users to be aware of what they can or cannot really do and to fully understand the implications and risks with regard to the modification of 'Ex d' enclosures, so that the certification of the whole equipment is not affected.

As we already know, the main function of an 'Ex d' enclosure is to prevent an explosion from spreading from the box to the surrounding atmosphere and to protect its internal components from the environment, humidity, dirt and dust.

It is therefore vital that rolling joints are always kept undamaged and clean, in order to guarantee correct rolling.

Fig. 12 EJB series 'Ex d' enclosure where you can see the rolling joint, where the distance "l" is the length of the flat section between the inside of the enclosure and the hole, while the distance "L" is the length of the rolling joint, that must be in compliance with the provisions of the IEC/EN 60079-1 standard, per type of execution (IIB or IIC).

7. Implications and risks deriving from the modification of explosion proof enclosures

Ex d
Ex e
Ex c
Ex b
Ex a

All operations that may affect the certification of an Ex product must be carried out only by those who hold the certificate of full conformity of the product in question. There is, however, a special case on the market that often occurs and for which the approach of the standards is not always complied with.

We are talking about piercing 'Ex d' enclosures. This being a critical operation, the standard provides for the holder of the certificate to take the responsibility for performing and checking it, otherwise said operation can only be carried out by third parties that have been previously qualified by the original manufacturer.

Fig. 13 Example of 'Ex d' enclosure, certified as a control and warning unit. Melting, processing, painting, installation of electrical, mechanical and wiring components made totally in the Cortem plant.

In reality, different situations can often be found on the market, for instance a third party configuring 'Ex d' boxes and carrying out the relative checks. This happens for reasons connected to the market itself: delivery times often do not allow supplying all markets from one centre and the costs of having multiple production sites cannot be sustained by everybody but, as said above, these third parties cannot change and/or modify the original manufacturer's product unless they are authorized to carry out modifications.

• Implications and risks deriving from the modification of explosion proof enclosures

No Directive provides for the end user modifying 'Ex d' enclosures produced by the manufacturer. Once the empty 'Ex d' enclosure (without any components, so with a certificate with a "U" final extension) leaves the factory and has been certified and tested by the original manufacturer via its quality system, this enclosure will keep its certificate only if it is not modified in any way. The addition of equipment or terminals, making holes on the body and/or lid, means that the end user must have it certified again and get a new certificate plate, eliminating the original manufacturer's.

Fig. 14 Explosion proof enclosure in AISI 316L stainless steel complete with the controls on the lid.

The most frequent errors

Improved staff training and growing awareness of the importance of these standards are vital to safety and would prevent some of the most common mistakes, such as making new openings in an 'Ex d' enclosure before or after installation or insert additional electrical components that are not included in the certificate.

The addition, for instance, of a switch can affect the class of temperature of the enclosures and lead to the other components inside it overheating, that can in turn be damaged and cause an ignition. Moreover, this modification might weaken the mechanical integrity of the enclosure and lead to spreading the flames because of the pressure exceeding the set limit. The results of the flame propagation test carried out during the CE test procedure would in this case be affected and it would no longer be possible to check the ignition inside the enclosure safely.

Another very common mistake is the inadvertent damage to flanges and threads while maintaining the enclosures, above all the heavier ones, because the lid is unscrewed and lifted without the due care and attention.

Therefore, pursuant to the IEC/EN 60079-19 standard, only the manufacturer of the enclosures or an authorized third party can carry out these modifications. If the modification is performed by a third party not pre-

Implications and risks deriving from the modification of explosion proof enclosures

Fig. 16 Control panel with double-fronted installation made on the customer's specifications

After correctly installing an 'Ex d' enclosure, standard EN/IEC 60079-17 outlines the principles that the operator must comply with for the maintenance, approval test and repair of the equipment, including the consultancy for all questions regarding safety in the workplace.

Fig. 17 Part of the workshop fitted with horizontal and vertical processing stations, CNC lathes, transferring machine and equipment.

7. Implications and risks deriving from the modification of explosion proof enclosures

The IECEx OD 203 document "Guidance on the definition of 'manufacturer' in relation to 'trade agents' and 'local assemblers'" was issued during the second quarter of 2014, as a support and implementation of document IECEx OD 009 that clarifies this question.

In this document, in fact, for the first time in the whole standard system, the possibility that part of the wiring and assembly is carried out by a third party, called "Local Assembler" is explicitly provided for. It must be noticed that this person must anyway be qualified and credited by the certificate holder, with well-defined procedures. This approach cannot, therefore, be used with all customers, but only with specific and controlled figures.

Even more vital is that, the OD 203 accepts for the first time that a qualified third party (local assembler) can carry out mechanical processing, so that he can do piercings but can never perform any lamination on the mating flanges (art. 2.3.5.2. dell'OD 203).

So, even if previously there could be some doubt, the situation is clearer now: the people carrying out processes in the name of the manufacturer are "Local Assemblers" and can perform a limited number of operations. In particular, they cannot perform any grinding and/or lamination but can do drillings and assembly/wiring. Apart from this clarification, the introduction of this document lets you understand IECEx's policy with regard to drilling on 'Ex d' products not performed by the manufacturer.

It is therefore important for customers, distributors and manufacturers themselves, to understand that this grey area is no more.

Certification tests

People buying 'Ex d' flameproof enclosures should know that, to get a certificate from a credited body or laboratory, for either a component or full conformity, the manufacturer must carry out a series of tests in compliance with the provisions of EN/IEC 60079-0 (General Requirements) and EN/IEC 60079-1 (Equipment protection by explosion proof enclosures "d").

For all the 'Ex d' equipment, Cortem Group performs the following tests:

- Reference pressure tests providing for the ignition of an enclosure after filling it with a mixture of explosive gas. The pressure will depend on the lowest enclosure ambient temperature (the lower the temperature, the higher the reference pressure) and on the electrical components fitted inside it;
- Flame propagation test, using an explosive mixture of gases: it is placed in a room with explosion risk and, when the explosive mixture contained inside is ignited, it is checked that the propagation of the explosion stops and does not pass to the atmosphere outside through the joints;

Implications and risks deriving from the modification of explosion proof enclosures

- Tests to prevent an electrostatic ignition source from becoming dangerous;
- Heat tests to determine the maximum surface temperature allowed for the equipment complete with its components in extreme conditions of use, taking into consideration a safety margin, and heat/cold resistance tests (on non-metal enclosures or components);

● Implications and risks deriving from the modification of explosion proof enclosures

Tests for the IP degree of protection;

Fig. 21 IP X6 protection degree test

Tests for internal overpressure.

Fig. 22 Overpressure test on an enclosure 'Ex d' at 16 Bar for 1 minute

Approval tests

For all the 'Ex d' equipment, Cortem Group performs the following approval tests:

- Hydrostatic overpressure test: test that must be performed on each enclosure produced (if not provided for in the certificate that these boxes have been tested at 4 times the reference pressure and do not therefore require further testing in production).

Concluding, end users and/or installers must know the regulations in force and read the instruction manual supplied by the manufacturer before any interventions and/or modifications of 'Ex d' enclosures are carried out, favouring the purchase of complete equipment from the company holding the certificate.

EJB-... series Aluminium junction boxes gas group IIB+H₂

EJB series junction boxes are suitable for installation in any areas of a plant where there is a risk of explosion and/or fire, or areas where combustible dust is present, classified as Zone 1, 2, 21, 22. The quality of this product is recognized and valued the world over for its specific aluminium alloy and the mechanical property of its finishes. The EJB series is mostly used as a box to carry terminals and busbars, fuse carriers, transformers, reactors and barriers, though it is also used to produce control and signalling boards, light and power boards and surge arresters, and motor starter boxes with various configurations, which are custom made to the requirements of our customers worldwide.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

Application sectors:

CERTIFICATION DATA FOR EMPTY ENCLOSURES

Classification:	Group II	Category 2GD		
Installation: EN 60079.14	zone 1 - zone 2 (Gas)	zone 21 - zone 22 (Dust)		
Marking:	CE 0722 Ex II 2 GD - Ex db IIB+H2 Gb - Ex tb IIIC Db - IP66/67			
Certification:	ATEX CESI 00 ATEX 036U			
	ATEX FIDI 25 ATEX 0001U (EJBX-6BB)			
	IEC Ex CES 14.0017U	All IEC Ex, ECASEx, UKEX, TR CU and INMETRO certification data can be downloaded from www.cortemgroup.com		
	IEC Ex FIDI 25.0003U (EJBX-6BB)			
	UKEX AVAILABLE

OTHER AVAILABLE CERTIFICATES (please contact the sales department for further information)

EXTENSION n° 07/12 to EC-type examination certificate CESI 01 ATEX 027

Equipment: EJB-series control, monitoring and signalling units
EJB-55B enclosures with PDTrac partial discharge monitoring units

EXTENSION n° 04/08 to EC-type examination certificate CESI 01 ATEX 027

Equipment: EJB-series control, monitoring and signalling units
EJB-6 enclosures with RX and IBUC units

CESI 07 ATEX 047 CERTIFICATE

EJB..AD and MU..AD switchgear
Enclosures made from cast iron

CESI 11 ATEX 037 CERTIFICATE

EJB-45 with actuators. "Hook release controller" for simultaneous release of hooks
The actuators control 1,2 or 3 push-pull controls that are fed out of the enclosure through certified RRC-01 bushes

EXTENSION n° 07/12 to EC-type examination certificate CESI 01 ATEX 027

Equipment: EJB-series control, monitoring and signalling units
New type of equipment named Surge Protection Device has been added

MECHANICAL FEATURES

Body and lid:	Low copper content aluminium alloy
Hinges:	Cast (except for EJB-01), stainless steel for new models
Lid handle:	Made of black painted steel for EJB-6/6B/EJB-6BB and EJB-7/7B models (see below). Made of black painted plastic for EJB-55/55B models
Gasket:	Acid, hydrocarbon and high temperature-resistant silicone, located between body and lid
Certification label:	Adhesive label located inside on empty enclosures; aluminium label riveted onto lid on other versions
Bolts and screws:	Stainless steel
Earth screws:	M6 stainless steel. On inside and outside of body and on lid complete with anti-rotation brackets
Mounting brackets:	Electroalvanized steel (cast aluminium feet for AQS-1)
Coating:	Polyester coating RAL 7035 (Light grey)

Corrosion Resistance:

The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN 60068-2-30 (hot/humid cycles) and EN 60068-2-11 (salt mist tests)

Lid featuring Cortem easy-close system.

For EJB-6/6B/6BB and EJB-7/7B junction boxes, the opening and closing of the cover is facilitated by the presence of an even more sturdy handle, able to offer a greater safety of use for the operator. It is made of stainless steel AISI 316L, which, after a blasting process, is coated with a matt black powder (RAL 9005) coating that ensures pleasing aesthetics and a high resistance to physical impact and corrosion in saline environments.

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

- Internal anti-condensation coating RAL 2004 (pure orange)
- External polyester coating in different colour (specify the RAL number)
- Breather valve Code ECD-210S or drain valve Code ECD-210S
- Round or rectangular windows on lid (see section Enclosures with windows for inspection and reading instruments)
- Hinges for enclosures EJB-01 Code K-0351
- Internal mounting plate: 2.5mm-thick aluminium (code BFE-...). See accessories section
2.5mm-thick electroalvanized steel (code BFE-...AC).
- Thread options:
 - NPT threads ANSI B1.20.1
 - GAS UNI ISO 7-1 thread
 - Metric threads ISO 261/965
- Hinges on the short side (only for new models) example cod. EJB.5BS

Cortem manufactures any type of custom-made products according to customer specifications and in compliance with the certification data.

EJB-... series Aluminium junction boxes gas group IIB+H₂

Cortem is introducing a new model of EJB enclosures that will replace the entire range. This new series will be provided with new stainless steel hinges and a new lid that will allow more flexibility in the supply of the product. Cortem will then be able to offer the best solution to customer needs.

Dimensions in mm

EJB-7 detail

Detail of box AQS-1

The AQS-1 series junction boxes have been designed to contain distribution terminal blocks and control switches.

Its particular compactness and the inward flange makes them ideal for all those applications in which it is necessary to realize control panels of small dimensions with the possibility of installing modular switches side by side with different types of poles and amperage. The standard hinged lid and silicone gasket make this junction box a qualitative, economical and compact choice.

EJB-... series Aluminium junction boxes gas group IIB+H₂

Aluminium enclosures with solid lids are used when there is a need to install a greater number of control and signalling devices than can be accommodated on the same enclosure with a ribbed lid or when handles need to be installed in certain positions on the lid.

Notes:

- The standard featured is for illustrative purposes only since it has been designed exclusively for M42 holes.
- Standard holes refer to mounting of Cortem control and signalling devices.
- 3/8" Ø holes for Cortem std. side-mounted handles centre-to-centre distance >70mm.
- 1/2" Ø holes for Cortem std. heavy-duty series side-mounted handles centre-to-centre distance >120mm.

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting frames. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

Rated voltage: 24 / 800 V
Rated frequency: 50 / 60 Hz

Modular terminals

Terminal cross-sectional area: 2.5; 4; 6; 10; 25; 35; 70; 95; 120; 185; 240; 300 [mm²]
Rated current: 12.5 - 452 [A]
Max. current density: 1.5 - 7 [A/mm²]

Multi-pole terminals

Terminal cross-sectional area: 3x16; 4x16; 3x25; 4x25; 3x40; 3x40; 4x40; 3x70; 4x125; 4x125; 3x200; 4x200; 3x315 [mm²]
Rated current: 48 - 252 [A]
Max. current density: 0.8 - 3 [A/mm²]

Busbars:

Dimensions of busbars: 20x5; 30x5; 40x5; 50x5; 60x5; 80x5; 100x4; 80x8; 100x5 [mm²]
Rated current: 240 350 480 600 690 800 800 1000 1000 [A]

Eg. 2x28= 2 rows of 28 terminals (total 56 terminals). The maximum number of standard terminals refers to CABUR terminals

Features of junction boxes for control, monitoring and signalling units

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using lid-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac 12 / 250 Vdc
Max. current on contacts and fuses:	650 A
Rated frequency:	50 / 60Hz
Max. wattage for lamps:	5 W (for Ta +40°C) / 3 W (for Ta +55°C)

Electrical characteristics valid for size EJB-55, EJB-6, EJB-6B, EJB-6BB, EJB-7, EJB-7B. (T5 100°C).

Rated voltage:	up to 690 Vac
Max. current:	up to 1000 A

Electrical characteristics valid for size EJB-45, EJB-5, EJB-5B, EJB-55B. (T5 100°C).

Rated voltage:	up to 750 Vdc
Max. current:	up to 630 A

Features of equipment that can be installed in enclosures to produce control and monitoring units.

Table of electrical features of components that can be installed in enclosures to produce control, monitoring and signalling units.

(The values refer to the catalogs of the leading manufacturers of electrical/electronic components available on the market)

Minimum air gap between components

Component voltage (V ac)	Min. air gap (mm)
60 - 250	6
250 - 380	8
380 - 500	10
500 - 660	12
660 - 1000	20
Component voltage (V dc)	Min. air gap (mm)
12 - 250	6

COMPONENT TYPE	Max. V (Volts)	Max. I (Amperes)	Max. power (Watts)
Analogue and digital instruments	660	5	10
Electronic inverters/reactors	400	-	10
PLCs Multiplexers and amplifiers	240	-	80
Testing and measuring devices	240	-	100
Circuit breakers	660	650	-
Fuses	660	400	-
Relays	500	10	12
Electronic control devices	660	-	100
Contactors	660	650	30
Timers	240	10	5
Twilight relays	240	-	2
Capacitors	660	-	-
Transformers	660	-	200
Resistors	240	-	300
Terminals	660	-	-
Reactors	277	7.5	40

Features of junction boxes for control, monitoring and signalling units

Identification and description of special equipment that can be installed inside.

Enclosures with batteries

Option of installing low-capacity batteries 1.5Ah, for powering small electronic devices or backup memories.

Whatever the case, the minimum distance of 20mm between the components installed and the inside walls of the enclosure must be met.

Enclosures with inverters

EJB-4, EJB-45, EJB-5, EJB-6, EJB-7 series enclosures, depending on the maximum ambient temperature (+40°C or + 55°C), can be fitted with inverters (ABB ACS550 or similar types) provided maximum power dissipation falls within the permitted range (see table).

Enclosure type	Maximum inverter power for Ta +40°C	Maximum inverter power for Ta +55°C	Maximum inverter power	Cooling fan flow rate
EJB-4	2.2 kW	1.5 kW	73 W	44 m³/h
EJB-45	2.2 kW	1.5 kW	73 W	44 m³/h
EJB-5	5.5 kW	4.0 kW	172 W	44 m³/h
EJB-6	7.5 kW	5.5 kW	232 W	88 m³/h
EJB-7	7.5 kW	5.5 kW	232 W	88 m³/h

Enclosures with surge arresters

Option of installing PRD or similar types of surge arresters, with a maximum protection limit of 65kA; whatever the case, the minimum distance of 20 mm between the arrester and the inside walls of the enclosure must be met.

Enclosures with fibre-optic cables

The enclosures have provision for feeding multiple (not single) fibre-optic cables in and out. The permitted optical power and radiation limits for optical cables are:

- 35mW and 5mW/m² for T4 temperature class
- 15mW and 5mW/m² for T6 temperature class

Enclosures with power transformer

Option of installing single-phase transformers (and three-phase transformers with EJB-7 only) provided maximum power is within the limits allowed by the certificate.

Enclosures with radio-frequency sources

Option of installing components with radio-frequency sources in the 9kHz to 60GHz range that can be used for continuous and pulsed transmission of signals. Antennas can be installed inside or outside the enclosure and must:

- comply with one of the protection types indicated in standard EN 60079-0
- be installed outside the hazardous area.

For more information, refer to CESI 01 ATEX 027X.

Features of junction boxes for control, monitoring and signalling units

Table with maximum power dissipation values for EJB and AQS series enclosures.

The temperature classes and maximum surface temperatures of control and monitoring unit enclosures depend on the size of the enclosure, ambient temperature and power dissipation inside the enclosure.

Enclosure type	Maximum power dissipation (Watts) with ambient temperature of +40°C			
	T6 class without indicator lights. Only indicator LEDs are allowed.	T5 class with indicator lights and/or LEDs	T5 class without indicator lights. Only indicator LEDs are allowed.	T4 class without indicator lights and/or LEDs

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac	12 / 250 Vdc
Max. current on contacts and fuses:	400 A	
Rated frequency:	50 / 60Hz	
Max. wattage for lamps:	3 W (for Ta +55 °C)	
Associated apparatus:	max. voltage Um	250V

GENERAL INSTALLATION INFORMATION

The maximum power dissipation inside the enclosure depends on the maximum current on contacts and fuses, the size of the enclosure, the temperature class (or maximum surface temperature for 2GD category) and ambient temperature, as specified in the maximum power dissipation tables (see previous page).

The maximum power dissipation must not exceed the values given in the table when non-'Ex i' components and 'Ex i' components (with 1.1W maximum power dissipation) are installed together.

The maximum power dissipation possible inside the enclosure will also depend on the maximum power dissipation of terminals, contacts and cables; whatever the case, the current density value allowed in the enclosure is prescribed by EN 60439-1, IEC 60439-1.

Details of barrier mounting inside enclosures

The "omega" rail, in accordance with EN 60079-11, is suitable for mounting barriers inside 'Ex d' enclosures.

Barriers are mounted (according to the manufacturer's directions) 7.5 mm away from the base of the enclosure and are secured to the DIN rail with 2 earth terminals (nominal cross-sectional area 6-10 mm) and 2 standard terminals for omega rails (EN 60079-11).

Up to how many barriers can be installed in the enclosures will depend on the properties of the barriers in question; in addition, the maximum number of barriers must not exceed the limit allowed by the certificate in any case.

Associated equipment can also be mounted on a DIN rail; when it is mounted on the enclosure's internal mounting plate, reference must be made to the minimum prescribed distances. Whether mounted on a rail or mounting plate, associated equipment must meet the following requirements:

Separators

When separators are used, they must be appropriately sized; their thickness and fastening inside the enclosure must be suitably determined and separators must allow air to circulate inside the enclosure.

Incoming cables

Incoming cables for 'Ex i' circuits must be suitably labelled or the area around the entry must be coloured blue RAL 5015. 'Ex i' entries must be clearly identified

Installation of 'Ex i' and non-'Ex i' components inside the enclosure.

Ex d IIB certified enclosures complete with accessories can contain only Ex ia IIB/IIC associated equipment; in this case, the resulting version becomes Ex d [ia] IIB.

Connection of internal cables

Cables are connected inside the enclosure to the barriers in accordance with EN 60079-11, with one side for connecting 'Ex i' cables and the opposite side for connecting non-'Ex i' cables.

Connection in 'Ex i' circuits must be made using insulated cables only; there must be no connections to non-'Ex i' circuits and no more than one cable can be connected to a single terminal. 'Ex i' cables cannot be grouped together with non-'Ex i' cables; in addition, 'Ex i' cables and non-'Ex i' cables must be kept separated. The minimum distance between the 2 types of cables must be 8 mm. The minimum insulation level for non-'Ex i' cables must be greater than 1.5 kV; the minimum insulation level for 'Ex i' cables must be greater than 0.5 kV.

Internal connections

When routing cables belonging to 'Ex i' circuits, the cables must be identified in one of the following ways:

- cables must have blue insulation (as long as there are no other cables inside the enclosure with this colour).
- 'Ex i' cables must be kept separate from non-'Ex i' cables with blue cable raceways.
- 'Ex i' cables must be grouped together, using a tie, for example, and the area identified with a blue label.

Warning 'Ex i' circuits

- cables for power circuits must have a cross-sectional area of at least 1.5 mm².
- 'Ex i' circuits must be kept at a distance of 50 mm from non-'Ex i' circuits.
- the earth connection must meet European standard EN 60079-14.

EJB-... series Features of junction boxes with interface units

The number of items of equipment mounted inside the enclosures and their layout will vary based on the following:

- in accordance with EN 60079-1 and IEC 60079-1, the equipment contained inside the enclosure can be arranged in any way provided that at least 40% of the surface area of each section is left free.
- equipment must be set at a suitable distance to accommodate cable wiring.

Maximum dimensions of 'Ex ia' equipment that can be installed inside enclosures.

AQS-1	350	300	90

Examples of installation of associated equipment - minimum distances.

Example of interface unit (with associated equipment) complete with separator

Example of interface unit without separator

NOTES

(*) 50 mm is the minimum safe distance between 'Ex i' components and non-'Ex i' components (and/or conducting parts).

- The active and passive barriers that can be installed in the enclosures must have their own ATEX certificate.
- The maximum voltage entering barriers on non-'Ex i' circuits must be less than 250 V.

EJB-... series Junction boxes with round viewing windows

EJB series junction boxes are used as enclosures for electrical equipment that requires a visual interface with the outside. Voltmeters, ammeters and other analogue and digital measuring instruments are typical examples of installations that require a window for taking direct readings. These enclosures are also used to house monitoring instruments such as infra-red photoelectric cells and twilight sensors that provide pulses for control and signalling equipment (opening/closing, alarms, etc....). Our technical department will decide what size enclosures to use based on your requirements and determine the internal layout so that all the dimensional and electrical parameters prescribed by the certificate are met. We can install equipment to your specifications within the technical limits allowed by the certificate and based on our standard control and signalling devices.

EJBC

- Zone 1, 2, 21, 22
- Group IIC
- Aluminium junction boxes
- IP 66 / 67

Patent Pending

Hinges in stainless steel

Easy opening of the lid with handle

Mounting bracket

Multi-step joint on body and cover

External earth screw in body

Internal earth screw in body

EJBC-... series Aluminium junction boxes gas group IIC

The EJBC series junction boxes have been carefully designed to allow their installation in areas with danger of explosion and/or fire due to the presence of all Gases of Group IIA - IIB - IIC classified as Zone 1, 2, 21, 22. The peculiar multi-step joint, obtained thanks to the high quality and precision of the machining, has allowed, in fact, the extension of the protection of gases to Group IIC [Acetylene (C_2H_2), Carbon disulphide, Hydrogen (H_2)]. The quality of this product is recognized and valued the world over for its specific aluminium alloy and the mechanical property of its finishes. The EJBC series is mostly used as a box to carry terminals and busbars, fuse carriers, transformers, reactors and barriers, though it is also used to produce control and signalling boards, light and power boards and surge arresters, and motor starter boxes with various configurations, which are custom made to the requirements of our customers worldwide.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

MECHANICAL FEATURES

Body and lid:	Low copper content aluminium alloy
Hinges:	Stainless steel
Lid handle:	Made of black painted plastic
Gasket:	Acid, hydrocarbon and high temperature-resistant silicone, located between body and lid
Certification label:	Adhesive label located inside on empty enclosures; aluminium label riveted onto lid on other versions
Bolts and screws:	Stainless steel
Earth screws:	M6 stainless steel. On inside and outside of body and on lid complete with anti-rotation brackets
Mounting brackets:	Electrogalvanized steel
Coating:	Polyester coating RAL 7035 (Light grey)

Corrosion Resistance

The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN 60068-2-30 (hot/humid cycles) and EN 60068-2-11 (salt mist tests)

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Internal anti-condensation coating RAL 2004 (pure orange)	
External polyester coating in different colour (specify the RAL number)	
Breather valve Code ECD-210S	
Drain valve Code ECD-210S	
Round or rectangular windows on lid (see section Enclosures with windows for inspection and reading instruments)	
Internal mounting plate:	2.5mm-thick aluminium (code BFE-...). See accessories section 2.5mm-thick electrogalvanized steel (code BFE-...AC).
Thread options:	
• NPT threads ANSI B1.20.1	
• GAS UNI ISO 7-1 thread	
• Metric threads ISO 261/965	
Junction box in stainless steel AISI 316L (contact our Sales Office for availability)	

Cortem manufactures any type of custom-made products according to customer specifications and in compliance with the certification data.

Notes:

- The standard featured is for illustrative purposes only since it has been designed exclusively for M42 holes.
- Standard holes refer to mounting of Cortem control and signalling devices.
- 3/8" Ø holes for Cortem std. side-mounted handles centre-to-centre distance >70mm.
- 1/2" Ø holes for Cortem std. heavy-duty series side-mounted handles centre-to-centre distance >120mm.

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting frames. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

Rated voltage: 24 / 800 V
Rated frequency: 50 / 60 Hz

Modular terminals

Terminal cross-sectional area: 2.5; 4; 6; 10; 25; 35; 70; 95; 120; 185; 240; 300 [mm²]
Rated current: 12.5 - 452 [A]
Max. current density: 1.5 - 7 [A/mm²]

Multi-pole terminals

Terminal cross-sectional area: 3x16; 4x16; 3x25; 4x25; 3x40; 3x40; 4x40; 3x70; 4x125; 4x125; 3x200; 4x200; 3x315 [mm²]
Rated current: 48 - 252 [A]
Max. current density: 0.8 - 3 [A/mm²]

Busbars:

Dimensions of busbars: 20x5; 30x5; 40x5; 50x5; 60x5; 80x5; 100x4; 80x8; 100x5 [mm²]
Rated current: 240 350 480 600 690 800 800 1000 1000 [A]

ATEX - IECEx label
for terminal enclosures

Data filled in:

EJBC-5B	3x80	3x70	3x60	3x50	3x40	2x28	22	10	10	8

Eg. 2x28= 2 rows of 28 terminals (total 56 terminals). The maximum number of standard terminals refers to CABUR terminals

Features of junction boxes for control, monitoring and signalling units

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using lid-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac 12 / 250 Vdc
Max. current on contacts and fuses:	650 A
Rated frequency:	50 / 60Hz
Max. wattage for lamps:	5 W (for Ta +40°C) / 3 W (for Ta +55°C)

Electrical characteristics valid for size EJBC-45, EJBC-5 (T5 100°C).

Rated voltage:	up to 750 Vcc
Max. current:	up to 630 A

Features of equipment that can be installed in enclosures to produce control and monitoring units.

Table of electrical features of components that can be installed in enclosures to produce control, monitoring and signalling units.

(The values refer to the catalogs of the leading manufacturers of electrical/electronic components available on the market)

Minimum air gap between components

Component voltage (V ac)	Min. air gap (mm)
60 - 250	6

Reactors	277	7.5	40

Features of junction boxes for control, monitoring and signalling units

Identification and description of special equipment that can be installed inside.

Enclosures with batteries

Option of installing low-capacity batteries 1.5Ah, for powering small electronic devices or backup memories.

Whatever the case, the minimum distance of 20mm between the components installed and the inside walls of the enclosure must be met.

Enclosures with inverters

EJBC-45, EJBC-5 series enclosures, depending on the maximum ambient temperature (+40°C or + 55°C), can be fitted with inverters (ABB ACS550 or similar types) provided maximum power dissipation falls within the permitted range (see table).

Enclosure type	Maximum inverter power for Ta +40°C	Maximum inverter power for Ta +55°C	Maximum inverter power	Cooling fan flow rate
EJBC-45	2.2 kW	1.5 kW	73 W	44 m³/h
EJBC-5	5.5 kW	4.0 kW	172 W	44 m³/h

Enclosures with surge arresters

Option of installing PRD or similar types of surge arresters, with a maximum protection limit of 65kA; whatever the case, the minimum distance of 20 mm between the arrester and the inside walls of the enclosure must be met.

Enclosures with fibre-optic cables

The enclosures have provision for feeding multiple (not single) fibre-optic cables in and out. The permitted optical power and radiation limits for optical cables are:

- 35mW and 5mW/m² for T4 temperature class
- 15mW and 5mW/m² for T6 temperature class

Enclosures with power transformer

Option of installing single-phase transformers provided maximum power is within the limits allowed by the certificate.

Enclosures with radio-frequency sources

Option of installing components with radio-frequency sources in the 9kHz to 60GHz range that can be used for continuous and pulsed transmission of signals. Antennas can be installed inside or outside the enclosure and must:

- comply with one of the protection types indicated in standard EN-IEC 60079-0.
- be installed outside the hazardous area.

For more information, refer to certificate EPT 20 ATEX 4075 X / IECEx EUT 20.0024X.

Table with maximum power dissipation values for EJBC series enclosures.

The temperature classes and maximum surface temperatures of control and monitoring unit enclosures depend on the size of the enclosure, ambient temperature and power dissipation inside the enclosure.

Enclosure type	Maximum power dissipation (Watts) with ambient temperature of +40°C (+55°C)			
	T6 class without indicator lights. Only indicator LEDs are allowed.	T5 class with indicator lights and/or LEDs	T5 class without indicator lights. Only indicator LEDs are allowed.	T4 class without indicator lights and/or LEDs
EJBC-45	140W (105W)	140W (105W)	240W (180W)	480W (360W)
EJBC-45B	120W (90W)	120W (90W)	210W (160W)	430W (320W)
EJBC-5	210W (160W)	210W (160W)	315W (235W)	600W (450W)
EJBC-5B	170W (130W)	170W (130W)	250W (190W)	480W (360W)

Max. current on contacts and fuses:	400 A	
Rated frequency:	50 / 60Hz	
Max. wattage for lamps:	5 W (for Ta +40°C)	
	3 W (for Ta +55°C)	

GENERAL INSTALLATION INFORMATION

The maximum power dissipation inside the enclosure depends on the maximum current on contacts and fuses, the size of the enclosure, the temperature class (or maximum surface temperature for 2GD category) and ambient temperature, as specified in the maximum power dissipation tables (see previous page).

The maximum power dissipation must not exceed the values given in the table when non-'Ex i' components and 'Ex i' components (with 1.1W maximum power dissipation) are installed together.

The maximum power dissipation possible inside the enclosure will also depend on the maximum power dissipation of terminals, contacts and cables; whatever the case, the current density value allowed in the enclosure is prescribed by EN 60439-1, IEC 60439-1.

Details of barrier mounting inside enclosures

The "omega" rail, in accordance with EN 60079-11, is suitable for mounting barriers inside 'Ex d' enclosures.

Barriers are mounted (according to the manufacturer's directions) 7.5 mm away from the base of the enclosure and are secured to the DIN rail with 2 earth terminals (nominal cross-sectional area 6-10 mm) and 2 standard terminals for omega rails (EN 60079-11).

Up to how many barriers can be installed in the enclosures will depend on the properties of the barriers in question; in addition, the maximum number of barriers must not exceed the limit allowed by the certificate in any case.

Associated equipment can also be mounted on a DIN rail; when it is mounted on the enclosure's internal mounting plate, reference must be made to the minimum prescribed distances. Whether mounted on a rail or mounting plate, associated equipment must meet the following requirements:

Separators

When separators are used, they must be appropriately sized; their thickness and fastening inside the enclosure must be suitably determined and separators must allow air to circulate inside the enclosure.

Incoming cables

Incoming cables for 'Ex i' circuits must be suitably labelled or the area around the entry must be coloured blue RAL 5015. 'Ex i' entries must be clearly identified

Installation of 'Ex i' and non-'Ex i' components inside the enclosure.

Ex d IIC certified enclosures complete with accessories can contain only Ex ia IIC associated equipment; in this case, the resulting version becomes Ex d [ia] IIC.

Connection of internal cables

Cables are connected inside the enclosure to the barriers in accordance with EN 60079-11, with one side for connecting 'Ex i' cables and the opposite side for connecting non-'Ex i' cables.

Connection in 'Ex i' circuits must be made using insulated cables only; there must be no connections to non-'Ex i' circuits and no more than one cable can be connected to a single terminal. 'Ex i' cables cannot be grouped together with non-'Ex i' cables; in addition, 'Ex i' cables and non-'Ex i' cables must be kept separated. The minimum distance between the 2 types of cables must be 8 mm. The minimum insulation level for non-'Ex i' cables must be greater than 1.5 kV; the minimum insulation level for 'Ex i' cables must be greater than 0.5 kV.

Internal connections

When routing cables belonging to 'Ex i' circuits, the cables must be identified in one of the following ways:

- cables must have blue insulation (as long as there are no other cables inside the enclosure with this colour).
- 'Ex i' cables must be kept separate from non-'Ex i' cables with blue cable raceways.
- 'Ex i' cables must be grouped together, using a tie, for example, and the area identified with a blue label.

Warning 'Ex i' circuits

- cables for power circuits must have a cross-sectional area of at least 1.5 mm².
- 'Ex i' circuits must be kept at a distance of 50 mm from non-'Ex i' circuits.
- the earth connection must meet European standard EN 60079-14.

EJBC-... series Features of junction boxes with interface units

The number of items of equipment mounted inside the enclosures and their layout will vary based on the following:

- in accordance with EN 60079-1 and IEC 60079-1, the equipment contained inside the enclosure can be arranged in any way provided that at least 40% of the surface area of each section is left free.
- equipment must be set at a suitable distance to accommodate cable wiring.

Maximum dimensions of 'Ex ia' equipment that can be installed inside enclosures.

	d	e	f
EJBC-45	410	225	170
EJBC-45B	410	225	120
EJBC-5	480	280	220
EJBC-5B	480	280	150

Examples of installation of associated equipment - minimum distances.

Example of interface unit (with associated equipment) complete with separator

Example of interface unit without separator

NOTES

(*) 50 mm is the minimum safe distance between 'Ex i' components and non-'Ex i' components (and/or conducting parts).

- The active and passive barriers that can be installed in the enclosures must have their own ATEX certificate.
- The maximum voltage entering barriers on non-'Ex i' circuits must be less than 250 V.

EJBC-... series Aluminium junction boxes gas group IIC

EJBC series junction boxes are used as enclosures for electrical equipment that requires a visual interface with the outside. Voltmeters, ammeters and other analogue and digital measuring instruments are typical examples of installations that require a window for taking direct readings. These enclosures are also used to house monitoring instruments such as infra-red photoelectric cells and twilight sensors that provide pulses for control and signalling equipment (opening/closing, alarms, etc....). Our technical department will decide what size enclosures to use based on your requirements and determine the internal layout so that all the dimensional and electrical parameters prescribed by the certificate are met. We can install equipment to your specifications within the technical limits allowed by the certificate and based on our standard control and signalling devices.

EJBX-... series Stainless steel junction boxes gas group IIB+H₂

EJBX series junction boxes are installed in industrial plants where there is a risk of explosion and fire and where combustible dust is present, classified as Zone 1, 2, 21, 22. These enclosures are made from welded 316L sheet stainless steel and come complete with stainless steel screws and a silicone gasket running around the perimeter between the body and lid to provide the IP66 protection degree. The EJBX units are mostly used as junction boxes with relevant connection terminals, as enclosures for fuses, transformers and reactors, as monitoring and signalling boards, light and power boards or motor starter boxes with various configurations, which are custom made to the requirements of our customers worldwide.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

Stainless steel properties: The stainless steel used by Cortem to produce enclosures and accessories designed for use in cryogenic plants and highly corrosive environments is a very low carbon Iron-Chromium-Nickel-Molybdenum alloy. This alloy is highly resistant to intergranular (or intercrystalline) corrosion and to pitting corrosion. It is classified as an austenitic stainless steel UNI EN 10088-3 X 2 CrNiMo 17-12-2-E or AISI 316L according to the American Iron and Steel Institute. Its main quality is the spontaneous formation of a thin layer of chromium oxide on the surface that protects the metal underneath from corrosion attack. In addition, even if the metal is inadvertently damaged by abrasion or scratches, this film is self-renewing.

MECHANICAL FEATURES

Body and lid:	AISI 316L stainless steel
Hinges:	Lost-wax cast and welded onto enclosure
Lid handle:	Made of black painted steel for EJBX-55,55B, EJBX-6,6B, EJBX-7 and EJBX-8,8B,8BB made of black painted plastic for all other models.
Treatment:	Quartz sand blasting
Gasket:	Acid, hydrocarbon and high temperature-resistant silicone, located between body and lid
Certification label:	Adhesive label located inside on empty enclosures; stainless steel label riveted onto lid on other versions
Bolts and screws:	Stainless steel
Earth screws:	M6 stainless steel. On inside and outside of body and on lid complete with anti-rotation brackets
Mounting brackets:	4 feet welded onto body

Lid featuring Cortem easy-close system.

A locating peg is screwed into the body to make it easier to close the lid on enclosures mounted on a vertical frame. This system is used in enclosures EJBX-4 /4B, EJBX-45 /45B, EJBX-5 /5B, EJBX-6 /6B, EJBX-7, EJBX-8, 8B, 8BB.

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Hinges on the short side (code EJBX-...S)

Breather valve Code ECD-210S

Drain valve Code ECD-210S

2.5mm-thick stainless steel internal mounting plate (code BFE-...SS). See accessories section

Enclosures with windows on lid for instrument viewing / reading

External coating in your choice of paint colour

Thread options:

- NPT threads ANSI B1.20.1
- GAS UNI ISO 7-1 thread
- Metric threads ISO 261/965

Cortem manufactures any type of custom-made products according to customer specifications and in compliance with the certification data.

Notes:

- This standard is for illustrative purposes only since it has been designed exclusively for M42 holes.
- Standard holes refer to mounting of Cortem control and signalling devices.
- 3/8" Ø holes for Cortem std. side-mounted handles centre-to-centre distance >70mm.
- 1/2" Ø holes for Cortem std. heavy-duty series side-mounted handles centre-to-centre distance >120mm.

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting frames. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

Rated voltage: 24 / 800 V

Rated frequency: 50 / 60 Hz

Modular terminals

Terminal cross-sectional area: 2.5; 4; 6; 10; 25; 35; 70; 95; 120; 185; 240; 300 [mm²]

Rated current: 12.5 - 452 [A]

Max. current density: 1.5 - 7 [A/mm²]

Multi-pole terminals

Terminal cross-sectional area: 3x16; 4x16; 3x25; 4x25; 3x40; 3x40; 4x40; 3x70; 4x125; 4x125; 3x200; 4x200; 3x315 [mm²]

Rated current: 48 - 252 [A]

Max. current density: 0.8 - 3 [A/mm²]

Busbars:

Dimensions of

busbars:

20x5; 30x5; 40x5; 50x5; 60x5; 80x5; 100x4; 80x8; 100x5 [mm²]

Rated current:

240 350 480 600 690 800 800 1000 1000 [A]

Eg. 2x28= 2 rows of 28 terminals (total 56 terminals). The maximum number of standard terminals refers to the mounting of CABUR terminals

Features of junction boxes for control, monitoring and signalling units

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using lid-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac	12 / 250 Vdc
Max. current on contacts and fuses:	650 A	
Rated frequency:	50 / 60Hz	
Max. wattage for lamps:	5 W (for Ta +40°C)	3 W (for Ta +55°C)

Features of equipment that can be installed in enclosures to produce control and monitoring units.

Table of electrical features of components that can be installed in enclosures to produce control, monitoring and signalling units.

(The values refer to the catalogues of the leading manufacturers of electrical/electronic components available on the market)

COMPONENT TYPE	Max. V (Volts)	Max. I (Amperes)	Max. power (Watts)
Analogue and digital instruments	660	5	10
Electronic inverters/reactors	400	-	10
PLCs Multiplexers and amplifiers	240	-	80

CCA-...E series Aluminium junction boxes gas group IIC

The CCA...E series junction boxes are recommended for fitting with terminals given that they provide more room, making it easier for operators to gain access. On the other hand, the smaller wall area means drilling options are limited. They are suitable for installation in any plants where there is a risk of explosion and/or fire, or areas where combustible dust is present, classified as Zone 1, 2, 21, 22. The quality of this product is recognized and valued the world over for its specific aluminium alloy and the mechanical properties of its finishes. The CCA...E series is employed where group IIC gases are present and is mostly used as a box to carry terminals, fuse carriers, transformers, reactors and barriers, though it is also used to produce control and signalling boards, light and power boards and motor starter boxes with different configurations, which are specially custom made to the requirements of our customers worldwide. The CCA...EH series features a threaded lid with a tempered glass viewing window.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

ORIGINAL PRODUCT

MECHANICAL FEATURES

Body and lid:	Low copper content aluminium alloy. Screw-on lid with safety fastening grub screw
Gasket:	Resistant to acids, hydrocarbons and high temperatures, located between body and lid
Certification label:	Adhesive label located inside on empty enclosures; aluminium label riveted onto body on other versions
Bolts and screws:	Stainless steel
Earth screws:	Stainless steel. On inside and outside of body complete with anti-rotation brackets
Mounting:	Cast aluminium feet
Coating:	Polyester coating RAL 7035 (Light grey)
Corrosion Resistance:	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN 60068-2-30 (hot/humid cycles) and EN 60068-2-11 (salt mist tests)

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Internal anti-condensation coating RAL 2004 (pure orange)	
Possible drilling of the enclosure bottom	
Breather valve Code ECD-210S	
Drain valve Code ECD-210S	
External polyester coatings in different colour	
CCA-...EH series enclosures with round viewing window on lid	
Internal mounting plate:	2.5mm-thick aluminium (code TF-...E). See accessories section
	2.5mm-thick electrogalvanized steel (code TF-...EAC)
Thread options:	
•	NPT threads ANSI B1.20.1
•	GAS UNI ISO 7-1 thread
•	Metric threads ISO 261/965

Cortem manufactures any type of custom-made products according to customer specifications and in compliance with the certification data.

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting frames. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

Rated voltage: 24 / 800 V
Rated frequency: 50 / 60 Hz

Modular terminals

Terminal cross-sectional area: 2.5; 4; 6; 10; 16; 25; 35; 70; 95; 120; 185; 240 [mm²]
Rated current: 12.5 - 400 [A]
Max. current density: 1.65 - 7 [A/mm²]

Multi-pole terminals

Terminal cross-sectional area: 3x16; 4x16; 3x25; 4x25; 3x40; 3x40; 4x40; 3x70; 4x70; 3x125; 3x200; 4x200; 3x315 [mm²]
Rated current: 48 - 252 [A]
Max. current density: 0.8 - 3 [A/mm²]

ATEX - IECEx label for terminal enclosures

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR terminals

Features of junction boxes for control, monitoring and signalling units

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using body-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac	12 / 250 Vdc
Max. current on contacts:	650 A	
Rated frequency:	50 / 60Hz	

Features of equipment that can be installed inside enclosures to produce control and monitoring units.

Table of standard electrical features of components that can be installed in enclosures to produce control, monitoring and signalling units.

(The values refer to the catalogues of the leading manufacturers of electrical/electronic components available on the market)

COMPONENT TYPE	Max. V (Volts)	Max. I (Amperes)	Max. power (Watts)
Analogue and digital instruments	660	5	10
Electronic inverters/reactors	400	-	10
PLCs Multiplexers and amplifiers	240	-	80
Testing and measuring devices	240	-	100
Circuit breakers	660	650	-
Fuses	660	400	-
Relays	500	10	12
Electronic control devices	660	-	100
Contactors	660	650	30
Timers	240	10	5
Twilight relays	240	-	2
Capacitors	660	-	-
Transformers	660	-	200
Resistors	240	-	300
Terminals	660	-	-
Reactors	277	7.5	40

Minimum air gap between components

Component voltage (V ac)	Min. air gap (mm)
60 - 250	6
250 - 380	8
380 - 500	10
500 - 660	12
660 - 1000	20
Component voltage (V dc)	Min. air gap (mm)
12 - 250	6

Example of internal layout for CCA-...E series enclosures.

- Minimum distances -

Minimum distances for 630/650A switches and contactors

Identification and description of special equipment that is suitable for installation inside.

Enclosures with batteries

Option of installing low-capacity batteries $\leq 1.5\text{Ah}$, for powering small electronic devices or backup memories. Whatever the case, the minimum distance of 20mm between the components installed and the inside walls of the enclosure must be met.

Enclosures with surge arresters

Option of installing PRD or similar types of surge arresters, with a maximum protection limit of 65kA; whatever the case, the minimum distance of 20 mm between the arrester and the inside walls of the enclosure must be met.

Enclosures with fibre-optic cables

The enclosures have provision for feeding multiple (not single) fibre-optic cables in and out. The permitted optical power and radiation limits for optical cables are:

- 35mW and $5\text{mW}/\text{m}^2$ for T4 temperature class
- 15mW and $5\text{mW}/\text{m}^2$ for T6 temperature class

Enclosures with radio-frequency sources

Option of installing components with radio-frequency sources in the 9kHz to 60GHz range that can be used for continuous and pulsed transmission of signals. Antennas can be installed inside or outside the enclosure and must:

- comply with one of the protection types indicated in standard EN 60079-0
- be installed outside the hazardous area.

For more information, refer to certificate CESI 01 ATEX 036X.

Features of junction boxes for control, monitoring and signalling units

Table with maximum power dissipation values for CCA-...E series enclosures.

The temperature classes and maximum surface temperatures of control and monitoring unit enclosures depend on the size of the enclosure, ambient temperature and power dissipation inside the enclosure.

Enclosure type		Maximum power dissipation (Watts) with ambient temperature of +40°C		
		T6 class without indicator lights. Only indicator LEDs are allowed	T5 class with indicator lights and/or LEDs	T5 class without indicator lights. Only indicator LEDs are allowed
CCA-0E	CCA-0EH	8	9	13
CCA-01E	CCA-01EH	11	12	17
CCA-02E	CCA-02EH	23	25	36
CCA-03E	CCA-03EH	40	44	58
CCA-04E	CCA-04EH	93	100	164

Enclosure type		Maximum power dissipation (Watts) with ambient temperature of +55°C		
		T6 class without indicator lights. Only indicator LEDs are allowed	T5 class with indicator lights and/or LEDs	T5 class without indicator lights. Only indicator LEDs are allowed
CCA-0E	CCA-0EH	6	7	9
CCA-01E	CCA-01EH	9	10	13
CCA-02E	CCA-02EH	20	22	28
CCA-03E	CCA-03EH	29	32	43
CCA-04E	CCA-04EH	70	77	125

Example of panel with CCA-03E enclosure with 220/24V transformer and fuses for Cortem PY-216V socket and SPY-216V plug complete with SA141410 enclosure with connection terminal strip

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac	12 / 250 Vdc
Max. current on contacts and fuses:	400 A	
Rated frequency:	50 / 60Hz	

GENERAL INSTALLATION INFORMATION

The maximum power dissipation inside the enclosure depends on the maximum current on contacts and fuses, the size of the enclosure, the temperature class (or maximum surface temperature for 2GD category) and ambient temperature, as specified in the maximum power dissipation tables (see previous page).

The maximum power dissipation must not exceed the values given in the table when non-'Ex i' components and 'Ex i' components (with 1.1W maximum power dissipation) are installed together.

The maximum power dissipation possible inside the enclosure will also depend on the maximum power dissipation of terminals, contacts and cables; whatever the case, the current density value allowed in the enclosure is prescribed by EN 60439-1, IEC 60439-1.

Details of barrier mounting inside enclosures

The "omega" rail, in accordance with EN 60079-11, is suitable for mounting barriers inside 'Ex d' enclosures.

Barriers are mounted (according to the manufacturer's directions) 7.5 mm away from the base of the enclosure and are secured to the DIN rail with 2 earth terminals (nominal cross-sectional area 6-10 mm) and 2 standard terminals for omega rails (EN 60079-11).

Up to how many barriers can be installed in the enclosures will depend on the properties of the barriers in question; in addition, the maximum number of barriers must not exceed the limit allowed by the certificate in any case.

Associated equipment can also be mounted on a DIN rail; when it is mounted on the enclosure's internal mounting plate, reference must be made to the minimum prescribed distances. Whether mounted on a rail or mounting plate, associated equipment must meet the following requirements:

Separators

When separators are used, they must be appropriately sized; their thickness and fastening inside the enclosure must be suitably determined and separators must allow air to circulate inside the enclosure.

Incoming cables

Incoming cables for 'Ex i' circuits must be suitably labelled or the area around the entry must be coloured blue RAL 5015. 'Ex i' entries must be clearly identified.

Installation of 'Ex i' and non-'Ex i' components inside the enclosure.

Ex d IIC certified enclosures complete with accessories can contain only Ex ia IIC associated equipment. In this case, the resulting version becomes Ex d [ia] IIC.

Connection of internal cables

Cables are connected inside the enclosure to the barriers in accordance with EN 60079-11, with one side for connecting 'Ex i' cables and the opposite side for connecting non-'Ex i' cables.

Connection in 'Ex i' circuits must be made using insulated cables only; there must be no connections to non-'Ex i' circuits and no more than one cable can be connected to a single terminal. 'Ex i' cables cannot be grouped together with non-'Ex i' cables. In addition, 'Ex i' cables and non-'Ex i' cables must be kept separate. The minimum distance between the 2 types of cables must be 8 mm. The minimum insulation level for non-'Ex i' cables must be greater than 1.5 kV; the minimum insulation level for 'Ex i' cables must be greater than 0.5 kV.

Internal connections

When routing cables belonging to 'Ex i' circuits, the cables must be identified in one of the following ways:

- cables must have blue insulation (as long as there are no other cables inside the enclosure with this colour).
- 'Ex i' cables must be kept separate from non-'Ex i' cables with blue cable raceways.
- 'Ex i' cables must be grouped together, using a tie, for example, and the area identified with a blue label.

Warning 'Ex i' circuits

- cables for power circuits must have a cross-sectional area of at least 1.5 mm².
- 'Ex i' circuits must be kept at a distance of 50 mm from non-'Ex i' circuits.
- the earth connection must meet European standard EN 60079-14.

CCA-...E series Features of junction boxes with interface units

The number of items of equipment mounted inside the enclosures and their layout will vary based on the following:

- in accordance with standards EN 60079-1 and IEC 60079-1, the equipment contained inside the enclosure can be arranged in any way provided that at least 20% of the surface area of each section is left free.
- equipment must be set at a suitable distance to accommodate cable wiring.

Example of interface unit without separator

Example of interface unit (with associated equipment) complete with separator

NOTES

(*) 50 mm is the minimum safe distance between 'Ex i' components and non-'Ex i' components (and/or conducting parts).

- The active and passive barriers that can be installed in the enclosures must have their own ATEX certificate.
- The maximum voltage entering barriers on non-'Ex i' circuits must be less than 250 V.

Examples of installation of associated equipment - minimum distances.

CCA-...EH series Junction boxes with round viewing windows

CCA-...EH series junction boxes are used as enclosures for electrical equipment that requires a visual interface with the outside. Voltmeters, ammeters and other analogue and digital measuring instruments are typical examples of installations that require a window for taking direct readings. These enclosures are also used to house monitoring instruments such as infra-red photoelectric cells and twilight sensors that provide pulses for control and signalling equipment (opening/closing, alarms, etc....). Our technical department will decide what size enclosures to use based on your requirements and determine the internal layout so that all the dimensional and electrical parameters prescribed by the certificate are met. We can install equipment to your specifications within the technical limits allowed by the certificate and based on our standard control and signalling devices.

Grub screws for opening lid

External earth screw in body

CCA...C series Aluminium junction boxes gas group IIC

The CCAC series junction boxes are recommended when using lid-mounted control and signalling devices. The special mechanical construction of the flamepath joint produced on the inside of the body makes them suitable for use in areas where group IIC gases are present in any environments where there is a risk of explosion and/or fire or where combustible dust is present, classified as Zone 1, 2, 21, 22. The quality of this product is recognized and valued the world over for its specific aluminium alloy and the mechanical properties of its finishes. The CCAC series is mostly used to produce control and signalling boards, light and power boards and motor starter boxes with different configurations, which are specially custom made to the requirements of our customers worldwide.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

MECHANICAL FEATURES

Body and lid:	Low copper content aluminium alloy. Lid fitted with hinges for body coupling system incorporating cylindrical joint.
Hinges:	Stainless steel
Gasket:	Resistant to acids, hydrocarbons and high temperatures, located between body and lid
Certification label:	Adhesive label located inside on empty enclosures; aluminium label riveted onto body on other versions
Bolts and screws:	Stainless steel
Earth screws:	Stainless steel. On inside and outside of body complete with anti-rotation brackets
Mounting:	Cast aluminium lugs
Coating:	Polyester coating RAL 7035 (Light grey)
Corrosion Resistance:	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN 60068-2-30 (hot/humid cycles) and EN 60068-2-11 (salt mist tests)

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Internal anti-condensation coating RAL 2004 (pure orange)	
Possible drilling of the enclosure bottom	
Breather valve Code ECD-210S	
Drain valve Code ECD-210S	
External polyester coatings in different colour	
Internal mounting plate:	2.5mm-thick aluminium (code TF-...E). See accessories section 2.5mm-thick electrogalvanized steel (code TF-...EAC)
Thread options:	
• NPT threads ANSI B1.20.1	
• GAS UNI ISO 7-1 thread	
• Metric threads ISO 261/965	

Cortem manufactures any type of custom-made products according to customer specifications and in compliance with the certification data.

- 1/2" Ø holes for Cortem std. heavy-duty series side-mounted handles centre-to-centre distance >120mm.

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting frames. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

Rated voltage: 24 / 800 V
Rated frequency: 50 / 60 Hz

Modular terminals

Terminal cross-sectional area: 2.5; 4; 6; 10; 16; 25; 35; 70; 95; 120; 185; 240 [mm²]
Rated current: 12.5 - 400 [A]
Max. current density: 1.65 - 7 [A/mm²]

Multi-pole terminals

Terminal cross-sectional area: 3x16; 4x16; 3x25; 4x25; 3x40; 3x40; 4x40; 3x70; 4x70; 3x125; 3x200; 4x200; 3x315 [mm²]
Rated current: 48 - 252 [A]
Max. current density: 0.8 - 3 [A/mm²]

ATEX - IECEx label for terminal enclosures

Data filled in:

1. year of manufacture
2. serial number
3. product code
4. ambient temperature
5. electrical specs
6. maximum surface temperature
7. temperature class

Examples of terminal strips with minimum installation distances

TYPE OF ENCLOSURE	MAXIMUM NUMBER OF TERMINALS HOUSED								
	TERMINAL CROSS-SECTIONAL AREA								
	2.5	4	6	10	16	35	70	120	185
CCA-0C	13	12	8	7	6	-	-	-	-
CCA-01C	17	14	11	9	7	5	-	-	-
CCA-02C	2x22	2x19	2x15	2x12	2x10	6	-	-	-
CCA-03C	2x32	2x27	2x22	2x17	2x14	8	-	-	-
CCA-04C	3x40	3x30	2x28	2x23	2x18	12	10	6	4

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to CABUR terminals

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using lid-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac	12 / 250 Vdc
Max. current on contacts:	650 A	
Rated frequency:	50 / 60Hz	
Max. wattage for lamps:	5W (for Ta +40°C)	
	3W (for Ta +55°C)	

Features of equipment that can be installed inside enclosures to produce control and monitoring units.

Table of standard electrical features of components that can be installed in enclosures to produce control, monitoring and signalling units.

(The values refer to the catalogues of the leading manufacturers of electrical/electronic components available on the market)

COMPONENT TYPE	Max. V (Volts)	Max. I (Amperes)	Max. power (Watts)
Analogue and digital instruments	660	5	10
Electronic inverters/reactors	400	-	10
PLCs Multiplexers and amplifiers	240	-	80
Testing and measuring devices	240	-	100

CCA-02C	23	25	36
CCA-03C	40	44	58
CCA-04C	93	100	164

Enclosure type	Maximum power dissipation (Watts) with ambient temperature of +55°C		
	T6 class without indicator lights. Only indicator LEDs are allowed	T5 class with indicator lights and/or LEDs	T5 class without indicator lights. Only indicator LEDs are allowed
CCA-0C	6	7	9
CCA-01C	9	10	13
CCA-02C	20	22	28
CCA-03C	29	32	43
CCA-04C	70	77	125

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac	12 / 250 Vdc
Max. current on contacts and fuses:	400 A	
Rated frequency:	50 / 60Hz	
Max. wattage for lamps:	5W (for Ta +40°C)	3W (for Ta +55°C)

GENERAL INSTALLATION INFORMATION

The maximum power dissipation inside the enclosure depends on the maximum current on contacts and fuses, the size of the enclosure, the temperature class (or maximum surface temperature for 2GD category) and ambient temperature, as specified in the maximum power dissipation tables (see previous page).

The maximum power dissipation must not exceed the values given in the table when non-'Ex i' components and 'Ex i' components (with 1.1W maximum power dissipation) are installed together.

The maximum power dissipation possible inside the enclosure will also depend on the maximum power dissipation of terminals, contacts and cables; whatever the case, the current density value allowed in the enclosure is prescribed by EN 60439-1, IEC 60439-1.

Details of barrier mounting inside enclosures

The "omega" rail, in accordance with EN 60079-11, is suitable for mounting barriers inside 'Ex d' enclosures.

Barriers are mounted (according to the manufacturer's directions) 7.5 mm away from the base of the enclosure and are secured to the DIN rail with 2 earth terminals (nominal cross-sectional area 6-10 mm) and 2 standard terminals for omega rails (EN 60079-11).

Up to how many barriers can be installed in the enclosures will depend on the properties of the barriers in question; in addition, the maximum number of barriers must not exceed the limit allowed by the certificate in any case.

Associated equipment can also be mounted on a DIN rail; when it is mounted on the enclosure's internal mounting plate, reference must be made to the minimum prescribed distances. Whether mounted on a rail or mounting plate, associated equipment must meet the following requirements:

Separators

When separators are used, they must be appropriately sized; their thickness and fastening inside the enclosure must be suitably determined and separators must allow air to circulate inside the enclosure.

Incoming cables

Incoming cables for 'Ex i' circuits must be suitably labelled or the area around the entry must be coloured blue RAL 5015. 'Ex i' entries must be clearly identified.

Installation of 'Ex i' and non-'Ex i' components inside the enclosure.

Ex d IIC certified enclosures complete with accessories can contain only Ex ia IIC associated equipment. In this case, the resulting version becomes Ex d [ia] IIC.

Connection of internal cables

Cables are connected inside the enclosure to the barriers in accordance with EN 60079-11, with one side for connecting 'Ex i' cables and the opposite side for connecting non-'Ex i' cables.

Connection in 'Ex i' circuits must be made using insulated cables only; there must be no connections to non-'Ex i' circuits and no more than one cable can be connected to a single terminal. 'Ex i' cables cannot be grouped together with non-'Ex i' cables. In addition, 'Ex i' cables and non-'Ex i' cables must be kept separate. The minimum distance between the 2 types of cables must be 8 mm. The minimum insulation level for non-'Ex i' cables must be greater than 1.5 kV; the minimum insulation level for 'Ex i' cables must be greater than 0.5 kV.

Internal connections

When routing cables belonging to 'Ex i' circuits, the cables must be identified in one of the following ways:

- cables must have blue insulation (as long as there are no other cables inside the enclosure with this colour).
- 'Ex i' cables must be kept separate from non-'Ex i' cables with blue cable raceways.
- 'Ex i' cables must be grouped together, using a tie, for example, and the area identified with a blue label.

Warning 'Ex i' circuits

- cables for power circuits must have a cross-sectional area of at least 1.5 mm².
- 'Ex i' circuits must be kept at a distance of 50 mm from non-'Ex i' circuits.
- the earth connection must meet European standard EN 60079-14.

The number of items of equipment mounted inside the enclosures and their layout will vary based on the following:

- in accordance with standards EN 60079-1 and IEC 60079-1, the equipment contained inside the enclosure can be arranged in any way provided that at least 20% of the surface area of each section is left free.
- equipment must be set at a suitable distance to accommodate cable wiring.

Example of interface unit without separator

Example of interface unit (with associated equipment) complete with separator

Examples of installation of associated equipment - minimum distances.

NOTES

- (*) 50 mm is the minimum safe distance between 'Ex i' components and non-'Ex i' components (and/or conducting parts).
- The active and passive barriers that can be installed in the enclosures must have their own ATEX certificate.
- The maximum voltage entering barriers on non-'Ex i' circuits must be less than 250 V.

CCAI-... series Stainless steel junction boxes gas group IIC

CCAI series junction boxes are installed in industrial plants where there is a risk of explosion and fire, where combustible dust and group IIC gases are present, classified as Zone 1, 2, 21, 22. These enclosures are made from welded 316L sheet stainless steel and come complete with stainless steel screws and a silicone gasket running around the perimeter between the body and lid to provide the IP66 protection degree. The CCAI units are mostly used as junction boxes with relevant connection terminals, as enclosures for fuses, transformers and reactors, as monitoring and signalling boards, light and power boards or motor starter boxes with various configurations, which are custom made to the requirements of our customers worldwide.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

MECHANICAL FEATURES

Body and lid:	AISI 316L stainless steel. Lid fitted with hinges for body coupling system incorporating cylindrical joint.
Hinges:	Stainless steel
Gasket:	Resistant to acids, hydrocarbons and high temperatures, located between body and lid
Certification label:	Adhesive label located inside on empty enclosures; stainless steel label riveted onto body on other versions
Bolts and screws:	Stainless steel
Earth screws:	Stainless steel. On inside and outside of body complete with anti-rotation brackets.
Mounting:	Stainless steel lugs.

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

1.5mm-thick stainless steel internal mounting plate (code K...-265). See accessories section
Possible drilling of the enclosure bottom
Breather valve Code ECD-210S
Drain valve Code ECD-210S
Enclosures with windows on lid
Thread options:

- NPT threads ANSI B1.20.1
- GAS UNI ISO 7-1 thread
- Metric threads ISO 261/965

Cortem manufactures any type of custom-made products according to customer specifications and in compliance with the certification data.

- 1/2" Ø holes for Cortem std. heavy-duty series side-mounted handles centre-to-centre distance >120mm.

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting frames. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

Rated voltage: 24 / 800 V
Rated frequency: 50 / 60 Hz

Modular terminals

Terminal cross-sectional area: 2.5; 4; 6; 10; 16; 25; 35; 70; 95; 120; 185; 240 [mm²]
Rated current: 12.5 - 400 [A]
Max. current density: 1.65 - 7 [A/mm²]

Multi-pole terminals

Terminal cross-sectional area: 3x16; 4x16; 3x25; 4x25; 3x40; 3x40; 4x40; 3x70; 4x70; 3x125; 3x200; 4x200; 3x315 [mm²]
Rated current: 48 - 252 [A]
Max. current density: 0.8 - 3 [A/mm²]

ATEX - IECEx label for terminal enclosures

The label contains the following information:

- 1:** Year of manufacture (field with '20' and a box for the last digit)
- 2:** Serial number (s.n.)
- 3:** Product code (field with '1' and a box for the last digit)
- 4:** Ambient temperature (Ta) and maximum surface temperature (Tb) fields
- 5:** Electrical specifications (max voltage, max current, n° terminals, max wire size)
- 6:** Maximum surface temperature (Tb) field
- 7:** Temperature class (field with 'T' and a box for the last digit)

Other text on the label includes: CORTEM SpA, VIA AQUILEIA, 10 34070 VILLESSE - GO ITALY, CORTEM GROUP, Endlosures with terminals, CESI 01 ATEX 035, CE 0722, II 2GD, Ex d IIC T, Gb, Ex tb IIIC T, °C Db, IP66, IECEx TSA 06.0012, Ex d IIC T, Gb, Ex tb IIIC T, °C Db, IP66, Ta, °C, Tb, °C, V, max voltage, A, max current, n° terminals, max wire size [mm²], Made in ITALY, USE SCREWS QUALITY A2-70 UNI 7323 R 700 N/mm².

Data filled in:

1. year of manufacture
2. serial number
3. product code
4. ambient temperature
5. electrical specs
6. maximum surface temperature
7. temperature class

Examples of terminal strips with minimum installation distances

TYPE OF ENCLOSURE	MAXIMUM NUMBER OF TERMINALS HOUSED								
	TERMINAL CROSS-SECTIONAL AREA								
	2.5	4	6	10	16	35	70	120	185

Eg. 3x40= 3 rows of 40 terminals (total 120 terminals). The maximum number of standard terminals refers to CABUR terminals

Features of junction boxes for control, monitoring and signalling units

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using lid-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage:	24 / 1000 Vac	12 / 250 Vdc
Max. current on contacts:	650 A	
Rated frequency:	50 / 60Hz	
Max. wattage for lamps:	5W (for Ta +40°C)	
	3W (for Ta +55°C)	

Features of equipment that can be installed inside enclosures to produce control and monitoring units.

Table of standard electrical features of components that can be installed in enclosures to produce control, monitoring and signalling units.

(The values refer to the catalogues of the leading manufacturers of electrical/electronic components available on the market)

COMPONENT TYPE	Max. V (Volts)	Max. I (Amperes)	Max. power (Watts)
Analogue and digital instruments	660	5	10

CCAIF and CCAIF...H series junction boxes in stainless steel have a **screw cover** with or without round window. They are used either as junction boxes with/without terminals and the body and cover can be drilled and threaded according to customers' specification. In accordance with rules, Cortem only can perform the drilling.

CARATTERISTICHE MECCANICHE

Body and lid:	AISI 316L stainless steel.
Gasket:	Resistant to acids, hydrocarbons and high temperatures, located between body and lid
Certification label:	Adhesive label located inside on empty enclosures; stainless steel label riveted onto body on other versions.
Bolts and screws:	Stainless steel.
Earth screws:	Stainless steel. On inside and outside of body complete with anti-rotation brackets.
Mounting:	Stainless steel lugs.

ACCESSORI A RICHIESTA / ESECUZIONI SPECIALI

Breather valve Code ECD-210S

Drain valve Code ECD-210S

Enclosures with windows on lid

Thread options:

- NPT threads ANSI B1.20.1
- GAS UNI ISO 7-1 thread
- Metric threads ISO 261/965

Cortem manufactures any type of custom-made products according to customer specifications and in compliance with the certification data.

This image shows a full page of blank graph paper. The background is a solid light blue color. Overlaid on this background is a precise grid of thin, dark gray lines. The grid consists of small, equal-sized squares that cover the entire area of the page, from edge to edge. There are no margins, text, or other markings present on the sheet.

M-0

M-0 series control, monitoring and signalling devices are installed as external accessories on Cortem 'Ex d' enclosures used in any industrial environment where an explosive atmosphere may be present, classified as Zone 1, 2, 21, 22. M-0 control devices can be used to close or open electrical or mechanical devices fitted inside the 'Ex d' enclosures while the signalling devices feature lights to indicate their operating status. The control and signalling device components are made from stainless steel to deliver unbeatable efficiency under any environmental conditions. Levers are made from aluminium while the plastic parts on push-buttons are designed to provide lengthy service life even when used in a highly corrosive atmosphere. M-0 control and signalling devices have an IP66 protection degree.

CERTIFICATION DATA FOR CONTROL DEVICES

Classification:	Group II	Category 2GD

The command, control and signalling operators series M-0... have the following temperature ranges:
 Gruppo I applications: operating temperature -20°C +100°C
 Gruppo II applications: operating temperature -60°C +100°C

MECHANICAL FEATURES OF CONTROL DEVICES

Outer body:	Aluminium
Internal bush:	Stainless steel
Internal pin:	Stainless steel
Gaskets:	Acid/hydrocarbon-resistant silicone
Push-button:	Coloured nylon
Illuminated push-button:	Clear coloured polycarbonate
Handle levers:	Aluminium
Coating:	Polyester coating RAL 7035 (Light grey), where this is an option
Device mounting:	Screws into lid
Contact mounting:	Snap onto special flange, which assures quick connection of the whole contact block to the device

ELECTRICAL FEATURES (Contact block for push-buttons)

Rated voltage:	600V
Rated current:	10A
Impulse withstand voltage:	4kV
Insulation category:	Group C as per VDE 0110
Degree of protection of terminals:	IP2x as per CENELEC EN 60529
Contact operation:	<ul style="list-style-type: none"> – slow acting – self-cleaning (wiping action) – NC contact forced opening – double movable bridge – four points of contact – double break
Contact resistance	
≤ 25 mΩ as per IEC 255.7 category 3

PROTECTION AND PADLOCKING SYSTEMS FOR STANDARD CONTROL AND SIGNALLING DEVICES

Padlocking system designed for push-buttons
M-0429../..L

Assembly comprising stainless steel padlocking bar and chain for fastening to lid **M-0615**

Padlocking protection (code **M-0631**)

Padlock supplied on request

Padlocking system designed for double push-buttons
M-0427

Assembly comprising stainless steel padlocking bar and chain for fastening to lid. Code **M-0615**

System protecting against accidental operation
for mushroom-head push-buttons M-0445.. and
M-0447..

Protection in stainless steel coating in yellow.
Code **M-987**

System designed for push-buttons M-0445../..L

Assembly comprising stainless steel padlocking bar and chain for fastening. **M-0615/1**

PROTECTION AND PADLOCKING SYSTEMS FOR STANDARD CONTROL AND SIGNALLING DEVICES

Padlocking system designed for handles

This padlocking device is suitable for 3/8" GAS UNI 228 handles from the following series:

- M-0437
- M-0433
- M-0437
- M-0435
- M-0436
- M-0440
- M-0441

For 1/2" GAS UNI 228 heavy-duty series handles, i.e.:

- M-0438
- M-0439

we recommend using a locking grub screw screwed into the handle and lid

Type of handle padlocking devices

Code **M-698**

Code **M-698/1**

Code **M-698/2**

Code **M-698/3**

All identification, test or warning labels located on the enclosure lids are made from aluminium, stainless steel or Traffolyte depending on your specific requirements or as dictated by our own standards. They can be sized by our technical department based on standard models.

SF series

S... series Junction boxes gas group IIC

The S series junction boxes are made from aluminium alloy or AISI316L stainless steel and are used to accommodate cables connected both with multi-pole terminal strips and modular terminals. The extensive range offered caters to specific customer requirements and can be installed in areas classified as Zone 1, 2, 21, 22. The design features of the S series junction boxes make them suitable for operating temperatures in the -40°C to +160°C range depending on their size, the type of gasket used and the terminals used (see table for relevant electrical features).

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

SF... SSC... series Junction boxes gas group IIC

SF series enclosures from the (with wall-mounting bracket) and SSC series (with ceiling-mounting bracket) are installed on ducting paths as junction boxes for connecting and branching conductors.

Various different models are available and they can be supplied with multi-pole terminal strips or modular terminals.

MECHANICAL AND ELECTRICAL FEATURES

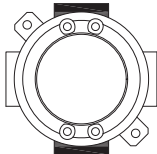

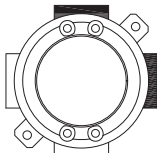

MOUNTING BRACKETS: Galvanized steel for SSC. Aluminium for SF.

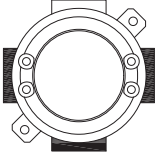

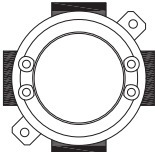

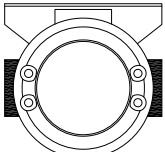

Other features are identical to S series boxes

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

ORIGINAL PRODUCT

'Ex d' SWS series enclosures are normally used to house temperature sensors, such as thermocouples, level gauges, flow transmitters and pressure sensors.

MECHANICAL FEATURES

Body and lid:	Low copper content aluminium alloy. Screw-on lid with safety fastening grub screw and steel chain so the lid cannot be misplaced
Gasket:	Acid/hydrocarbon-resistant silicone, located between body and lid
Entries:	Standard NPT thread
Certification label:	Adhesive label located on inside of lid
Bolts and screws:	Stainless steel
Earth screws:	Stainless steel. On inside and outside of body complete with anti-rotation brackets
Coating:	Polyester coating RAL 7035 (Light grey)
Corrosion Resistance:	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN 60068-2-30 (hot/humid cycles) and EN 60068-2-11 (salt mist tests)

SA, SAG

- Zona 1, 2, 21, 22
- Custodie in alluminio
- 18 grandezze differenti
- Resistenza meccanica IK10
- IP66

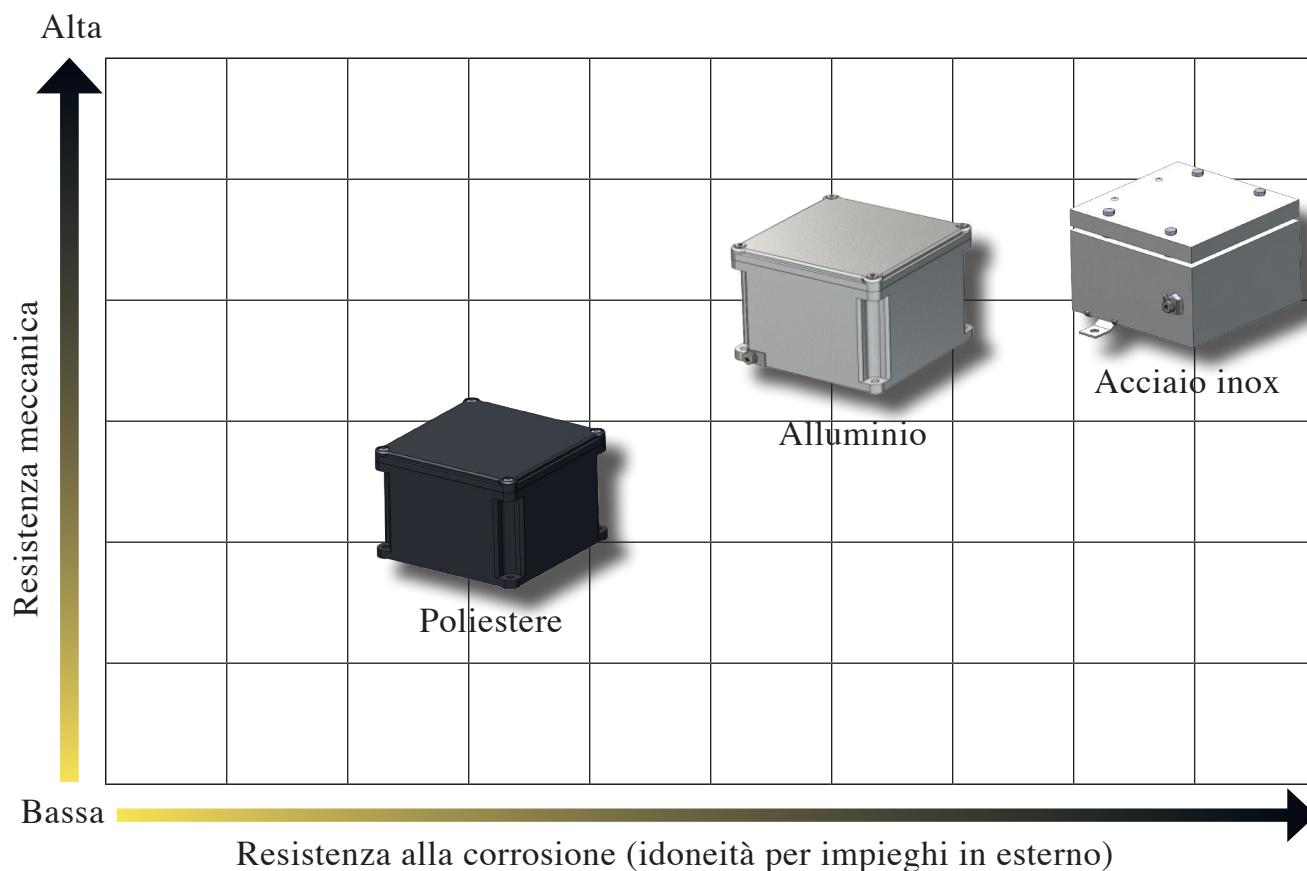

Custodie serie SA: criteri di scelta del prodotto

Quando ci si appresta a valutare una custodia a sicurezza aumentata, occorre considerare tutta una serie di dati fondamentali al fine di giungere ad una scelta corretta: la resistenza meccanica dei materiali, la resistenza alla corrosione, il grado di protezione IP e quello contro gli impatti IK nel caso di custodie per uso stagno/industriale.

Resistenza meccanica

Caratteristiche	Unità	Acciaio inox	Alluminio	Poliestere
Massa volumica	g/cm ³	8,0	2,65	1,7
Resistenza alla rottura	Mpa	500-700	80-110	130
Allungamento alla rottura	%	60-40	4-10	2
Modulo di elasticità	Gpa	193	79	11
Carico di snervamento	Mpa	≥ 200	80-165	-
Coeff. di dilatazione termica (20-100°C)	10 ⁻⁶ K ⁻¹	16	21	-
Resistività elettrica	Ωm	7,5x10 ⁻⁷	4,8x10 ⁻⁸	-
Conducibilità elettrica	Ω ⁻¹ m ⁻¹	1,33x10 ⁶	2,08x10 ⁷	-

Nel grafico sottostante si ha una visione d'insieme delle possibilità di impiego dei vari materiali in funzione di sollecitazioni meccaniche e condizioni ambientali sfavorevoli.

GRADI DI PROTEZIONE IP (IEC 529, EN 60529-4, CEI 70-1 ed. 11/92)

La tabella indica i gradi di protezione secondo le norme CEI 70-1 ed. 11/92. I gradi sono identificati dalla sigla IP seguita da 2 cifre alle quali possono essere aggiunte 2 lettere indicanti il grado di protezione contro le persone o altre caratteristiche. Esiste una variazione nell'applicazione dei gradi 7 e 8 relativi alla penetrazione dei liquidi, infatti non sempre questi gradi sottintendono l'idoneità anche per i gradi inferiori (che si ha invece dal grado IP x4 verso i livelli inferiori).

GRADI DI PROTEZIONE CONTRO GLI IMPATTI

Questa classificazione dimostra il livello accettabile di robustezza, nell'ambito della stima della sicurezza di un prodotto, ed è destinata principalmente alle prove su prodotti elettromeccanici.

1ª CIFRA PENETRAZIONE DEI SOLIDI	2ª CIFRA PENETRAZIONE DEI LIQUIDI	PROTEZIONE CONTRO GLI IMPATTI MECCANICI ESTERNI *
0 Non protetto	0 Non protetto	IK00 Non protetto
1 Protetto contro corpi solidi di dimensioni superiori a 50mm di Ø	1 Protetto contro la caduta verticale di gocce d'acqua	IK01 0,25 Kg 5,6 cm Protetto contro l'energia d'urto 0,15J
2 Protetto contro corpi solidi di dimensioni superiori a 12mm di Ø	2 Protetto contro la pioggia con inclinazione massima di 15°	IK03 0,25 Kg 14 cm Protetto contro l'energia d'urto 0,35J
3 Protetto contro corpi solidi di dimensioni superiori a 2,5mm di Ø	3 Protetto contro la pioggia con inclinazione massima di 60°	IK05 0,25 Kg 28 cm Protetto contro l'energia d'urto 0,7J
4 Protetto contro corpi solidi di dimensioni superiori a 1mm di Ø	4 Protetto contro gli spruzzi d'acqua	IK06 0,25 Kg 40 cm Protetto contro l'energia d'urto 1J
5 Protetto contro la polvere	5 Protetto contro i getti d'acqua con lanci da tutte le direzioni	IK07 0,5 Kg 40 cm Protetto contro l'energia d'urto 2J
6 Totalmente protetto contro la polvere	6 Protetto contro le ondate	IK08 1,7 Kg 30 cm Protetto contro l'energia d'urto 5J
LETTERA AGGIUNTIVA**	7 Protetto contro gli effetti dell'immersione	IK09 5 Kg 20 cm Protetto contro l'energia d'urto 10J
A Protetto contro l'accesso con il dorso della mano	8 Protetto contro gli effetti dell'immersione prolungata	IK10 5 Kg 40 cm Protetto contro l'energia d'urto 20J
B Protetto contro l'accesso con dito		
C Protetto contro l'accesso con un attrezzo		
D Protetto contro l'accesso con un filo		

LETTERA OPZIONALE

- H** Apparecchiature ad alta tensione
- M** Provato contro gli effetti dannosi dovuti all'ingresso di acqua con apparecchiatura in moto
- S** Provato contro gli effetti dannosi dovuti all'ingresso di acqua con apparecchiatura non in moto
- W** Adatto all'uso in condizioni atmosferiche specificate

* Secondo CEI EN 50102: 1996-05; CEI EN 60078-2-7-5: 1998-09.

** Lettera opzionale che descrive la protezione delle persone. Utilizzata solamente se la protezione contro l'accesso a parti pericolose è superiore a quella indicata dalla prima cifra, o se è indicata solo la protezione contro l'accesso a parti pericolose e la prima cifra è sostituita da una X.

Serie SA, SAG... Custodie in alluminio (Ex e) e (Ex i)

Le custodie serie SA...SAG sono costruite in lega d'alluminio, verniciate elettrostaticamente con polveri poliestere contenenti particelle di acciaio inox e seccate in forno a 200°C. Questo trattamento assicura una buona stabilità sia alla luce UV sia alla termica, garantendo protezione meccanica agli urti e un'ottima resistenza sia in presenza di nebbia salina, sia negli ambienti umide e marini. Le custodie serie SA, SAG vengono normalmente installate negli impianti industriali con pericolo di esplosione ed incendio classificati come Zona 1, 2, 21 22 e vengono prevalentemente utilizzate con la funzione di derivazione e/o smistamento cavi verso le sale controllo per segnali analogici o digitali, comando, controllo e segnalazione di apparecchiature quali motori, pompe...ecc, o lettura di grandezze fisiche quali portata, livello, temperatura, pressione ecc.... Grazie allo spessore delle pareti (7mm), la serie SAG è adatta per il collegamento diretto con tubi e raccordi con filettatura conica. Le soluzioni personalizzate Cortem offrono componenti certificati ATEX e IECEx e soluzioni applicative concepite per l'impiego in zone a rischio di esplosione. Il team Cortem competente, si impegna a soddisfare ogni richiesta del cliente.

Cortem Group applica sui suoi prodotti un'etichetta olografica di sicurezza non riposizionabile completa di codice alfanumerico univoco di autenticazione, al fine di combattere la vendita illegale di imitazioni e contraffazioni e assicurare l'autenticità dei propri prodotti. Il non rispetto delle norme internazionali comporta gravi rischi sia per l'ambiente, ma soprattutto per coloro che operano quotidianamente sugli impianti.

TIPO E APPLICAZIONE

La scelta di un contenitore appropriato è una fase determinante nello sviluppo di un progetto, quindi è necessario procedere con un'indagine sistematica valutando con metodo tutte le variabili: dove viene installata la nostra apparecchiatura, in quali condizioni ambientali, quale grado di protezione deve avere, qual è lo spazio a disposizione e come dovrà essere allestita. Elaborando queste informazioni, si arriva a definire il prodotto più adatto alle esigenze di progetto.

CONDIZIONI AMBIENTALI

La prima considerazione da fare è in quali condizioni ambientali viene installata l'apparecchiatura, se in esterno o in interno e in quali ambienti deve operare: industrie farmaceutiche, chimiche, petrolchimiche, alimentari, navali, agricole...

DIMENSIONI

Bisogna stabilire in anticipo le dimensioni dello spazio disponibile all'inserimento della custodia e dei suoi componenti.

DESIGN

Anche l'aspetto tecnico, il design del particolare e l'estetica sono importanti per la perfetta integrazione delle apparecchiature che verranno installate nella custodia. Un team Cortem di esperti vi assiste quotidianamente per dare le migliori soluzioni alle vostre domande.

Le custodie Cortem hanno superato:

- prova grado di protezione IP;
- prova di resistenza IK;
- prova in nebbia salina per resistenza alla corrosione;
- resistenza al calore
- resistenza alle basse temperature.

Settori di impiego:

Raffinerie
petrolifere

Impianti
chimici e
petrochimici

Impianti
onshore

Impianti
offshore

Basse
temperature

Deposito
combustibili

Installazioni
navali

Serie SA, SAG... Custodie in alluminio (Ex e) e (Ex i)

CUSTODIE SERIE SA e SAG

Modelli serie SA-... (serie leggera)
Pareti con spessore ridotto
Sul corpo sono ammessi solo fori passanti non filettati

Modelli serie SAG-... (serie robusta)
Pareti con spessore aumentato
Sul corpo sono ammessi anche fori filettati

CARATTERISTICHE MECCANICHE GENERALI

Corpo e coperchio:	In lega di alluminio a basso contenuto di rame
Resistenza agli urti:	IK10
Guarnizione:	Siliconica resistente agli acidi, agli idrocarburi ed alle alte temperature, collocata tra corpo e coperchio
Targhetta di certificato:	In alluminio rivettata su coperchio
Viteria:	Acciaio inox tipo impermeabile
Viti di terra:	Acciaio inox. Interna ed esterna al corpo complete di staffe antirotazione
Fissaggio:	Piedi di fusione in alluminio per viti M6
Verniciatura:	Poliestere Ral 7035 (Grigio luce) per Exe o Ral 5015 (Blu cielo) per Exi
Resistenza alla corrosione:	Lo STANDARD della lega di alluminio utilizzata da Cortem ha superato i test previsti dalle norme EN60068-2-30 (cicli di caldo-umido) e EN60068-2-11 (prove in nebbia salina)

ACCESSORI A RICHIESTA / ESECUZIONI SPECIALI

Possibile foratura del fondo della custodia. Consentito un foro massimo al centro, 1" NPT o ISO M32x1,5.
Verniciatura interna anticondensa RAL 2004 (Arancio puro)
Verniciatura poliestere esterna di colore differente (specificare il tipo di RAL)
Valvola di sfiato; Valvola di drenaggio
Telaio interno: acciaio inox (codice B...-229)
Profili di fissaggio morsettiere (codice OBO2060/S)
MORSETTI CERTIFICATI ATEX: i terminali andranno selezionati dalla lista di produttori approvati: Cabur, Phonix, ABB Entelec, Wago, Weidmuller. Quando la custodia è fornita come Ex i (per strumentazione a basso voltaggio) vengono forniti morsetti identificativi di colore blu.
Utilizzare solo pressacavi conformi alla Direttiva ATEX, IECEx. Per garantire IP66 su imbocchi utilizzare guarnizione e controado.

Queste custodie vengono customizzate in base alla dimensione, al numero di morsetti o di cavi previsti, oppure, tenendo conto del numero di entrate e delle esigenze di cablaggio all'interno di un impianto. È quindi possibile realizzare soluzioni su misura purché vengano dichiarati in fase di richiesta d'offerta, gli appropriati parametri necessari, come ad esempio il numero di pressacavi, raccorderia o giunti di bloccaggio da installare, per definire la dimensione della custodia più adeguata. Tutti i morsetti possono venire equipaggiati con gli accessori richiesti dal cliente e montati su apposite guide che vengono fissate ai telai interni della custodia. La disposizione delle morsettiere può essere fatta, sempre in accordo alle specifiche del cliente e sempre rispettando i dati di certificato, in differenti modi: verticalmente, orizzontalmente, su più file, su differenti livelli tramite appositi distanziatori.

CARATTERISTICHE ELETTRICHE

Esempi di morsettiere con distanze minime d'installazione

Note:

Rispettare le distanze minime indicate tenendo conto dello spazio per il cablaggio interno.

All'interno delle custodie sono ammessi solamente morsetti certificati ATEX.

I morsetti in esecuzione Ex i dovranno essere evidenziati o tramite targhetta o comunque con un diverso colore.

Le entrate cavo Ex i devono essere provviste di identificazione o con targhetta o contrassegno colore blu su pressacavi o lati custodia.

Es. 2x22= 2 file da 22 morsetti (totale 44 morsetti). Il numero massimo di morsetti standard è riferito al montaggio di morsetti CABUR e/o WEIDMULLER.

Prospetto indicativo realizzato tenendo conto unicamente delle dimensioni delle custodie e degli ingombri dei morsetti.

Serie SA, SAG... Caratteristiche custodie con morsetti

La potenza dissipata massima consentita, per mantenere una classe di temperatura T6 a temperatura ambiente fino a 40°C oppure con T5 a temperatura ambiente di 55°C non deve superare i dati stabiliti nelle tabelle seguenti.

Per temperatura ambiente di +60°C o +65°C, la massima potenza dissipata deve essere ridotta di -25%, la corrente nominale deve essere ridotta del 15%.

Le morsettiere utilizzate per i circuiti a bassa tensione (unità di segnalazione) con classe di temperatura T6 e massima temperatura ambiente +60°C o T4 e massima temperatura ambiente +65°C e +85°C, hanno come massima corrente quanto segue:

+60°C T6 -> max 1A Ex e, max 100mA Ex ia

+85°C T4 -> max 10A Ex e, max 100mA Ex ia

Nelle pagine successive, i valori indicati in tabella sono relativi al numero massimo di conduttori consentiti in presenza di una determinata area della sezione trasversale e una determinata corrente massima. Tutti i cavi in entrata e i collegamenti interni attivi (realizzati con il cablaggio) contano come cavi. I collegamenti di terra (quindi passivi), non vengono contati.

Quando la barra DIN/Omega è installata sul telaio interno (non usando i fori di fissaggio appositi per il telaio), il numero di morsetti può essere leggermente minore rispetto al numero indicato nelle tabelle.

Possono essere utilizzati altri tipi di morsetti fino al limite di spazio disponibile nella custodia. Tutti i morsetti utilizzati devono essere certificati ATEX e/o IEC Ex. Per i conduttori di sezione 25mm² possono essere utilizzati morsetti di dimensione 35mm².

Il numero massimo di morsetti e il numero massimo di righe indicate nelle tabelle sono un valore indicativo, bisogna prestare attenzione alle entrate cavi presenti sui lati delle custodie. Le dimensioni complessive interne dei pressacavi/controdadi e gli ingombri dei conduttori devono essere tenuti in considerazione per consentire il cablaggio.

In alcuni casi può essere necessario ridurre il numero di morsetti o il numero di righe.

Esempio di calcolo del numero massimo di conduttori.

Facciamo riferimento alla tabella SA141410: n.6 conduttori con 6mm² di sezione con 26A di corrente continua rappresentano i valori limite di questa custodia. Ne consegue che la custodia SA141410 è adatta a contenere n.3 morsetti da 6mm² (2 conduttori per ogni morsetto) con massima corrente pari a 26A.

Nella custodia c'è spazio sufficiente per n.11 morsetti da 6mm². Gli 8 morsetti rimanenti (11-3) possono essere aggiunti e utilizzati per bassi circuiti di corrente indicati con "colore giallo" nella tabella (in questo caso 8-10A massimo).

Il montaggio combinato per circuiti elettrici con diverse sezioni di cavo è possibile utilizzando i valori presentati proporzionalmente. Per esempio:

Sezione nominale (mm ²)	Corrente (A)	Quantità	Capacità
2,5	8	16 (di 46)	34,8%
4	11	12 (di 36)	33,3%
10	26	4 (di 13)	30,8%
Totale			98,9% <100%

Istruzioni per la determinazione della custodia adatta in base al numero di conduttori e morsetti previsti.

 : In questa sezione non compilata della tabella, dopo aver seguito le istruzioni e rispettato le misure previste per il cablaggio interno della custodia, è possibile aggiungere qualsiasi numero di morsetti fino al limite di spazio della custodia.

 : Il cablaggio in questa sezione non compilata della tabella non è coperto dal certificato.

Riga "C. No.": i valori riportati si riferiscono al numero massimo di terminali CABUR fisicamente ammessi nella custodia scelta. Questi valori sono il risultato di righe per numero di morsetti su ciascuna riga.

Riga "W. No.": lo stesso come sopra, ma riferiti ai morsetti Weidmuller.

Le marche dei morsetti citati sono utili solo per avere un'idea della quantità di morsetti installabile all'interno della custodia.

Gli altri valori riportati nelle celle lungo la diagonale della tabella, definiscono il numero massimo di conduttori permessi, in base alla loro sezione e alla massima corrente.

Le unità di comando, controllo e segnalazione sono utilizzate per la realizzazione di quadri di comando che, ubicati in prossimità delle utenze elettriche comandate, consentono un corretto funzionamento dell'impianto elettrico e garantiscono la sicurezza del personale in caso di manutenzione sull'impianto. Disponendo, infatti, di selettore Manuale/Automatico, permettono all'operatore di scegliere le condizioni per effettuare le operazioni necessarie in completa sicurezza. Esse offrono protezione e controllo di apparecchiature elettriche e circuiti di comando ubicati in zone a rischio d'esplosione e in ambienti particolarmente aggressivi. Vengono impiegate per il contenimento di apparati elettrici come interruttori, segnalatori, teleruttori, trasformatori, componenti analogici, digitali, ecc... con la possibilità di avere il controllo esterno tramite gli operatori Cortem installati su coperchio quali leve di comando, pulsanti, spie di segnalazione ecc... Cortem progetta, sviluppa e fornisce l'intero cablaggio di una o più custodie su specifica richiesta del cliente, realizzando batterie per quadristica anche di estrema complessità con la possibilità di effettuare tutti i test di collaudo.

CARATTERISTICHE ELETTRICHE

Tensione nominale: 600 V ac/dc
Max. corrente su contatti: 16 A
Frequenza nominale: 50 ÷ 60Hz

DISTANZE MINIME TRA CONTATTI CORTEM Ex e (esempio riferito al certificato CESI 03 ATEX 115)

Legenda:

1. spia di segnalazione M-0612
2. selettore rotativo M-0604
3. pulsante d'emergenza M-0605
4. blocco contatti M-0530
5. blocco contatti M-0531
6. pulsante M-0603
7. barra di terra
8. morsetti
9. telaio interno

Note:

"e">12mm : versione standard.

Adatta per tensione U<800V

"e">5mm : esecuzioni particolari.

Adatta per tensione U<250V

Grandezza custodia, la foratura e l'installazione degli operatori vengono comunque studiati tenendo anche conto dello spazio per il cablaggio interno e del passaggio cavi previsto.

SA-P

- Zone 1, 2, 21, 22
- Polyester junction boxes
- Choice of 9 sizes
- With antistatic property
- IK10 mechanical strength
- IP66

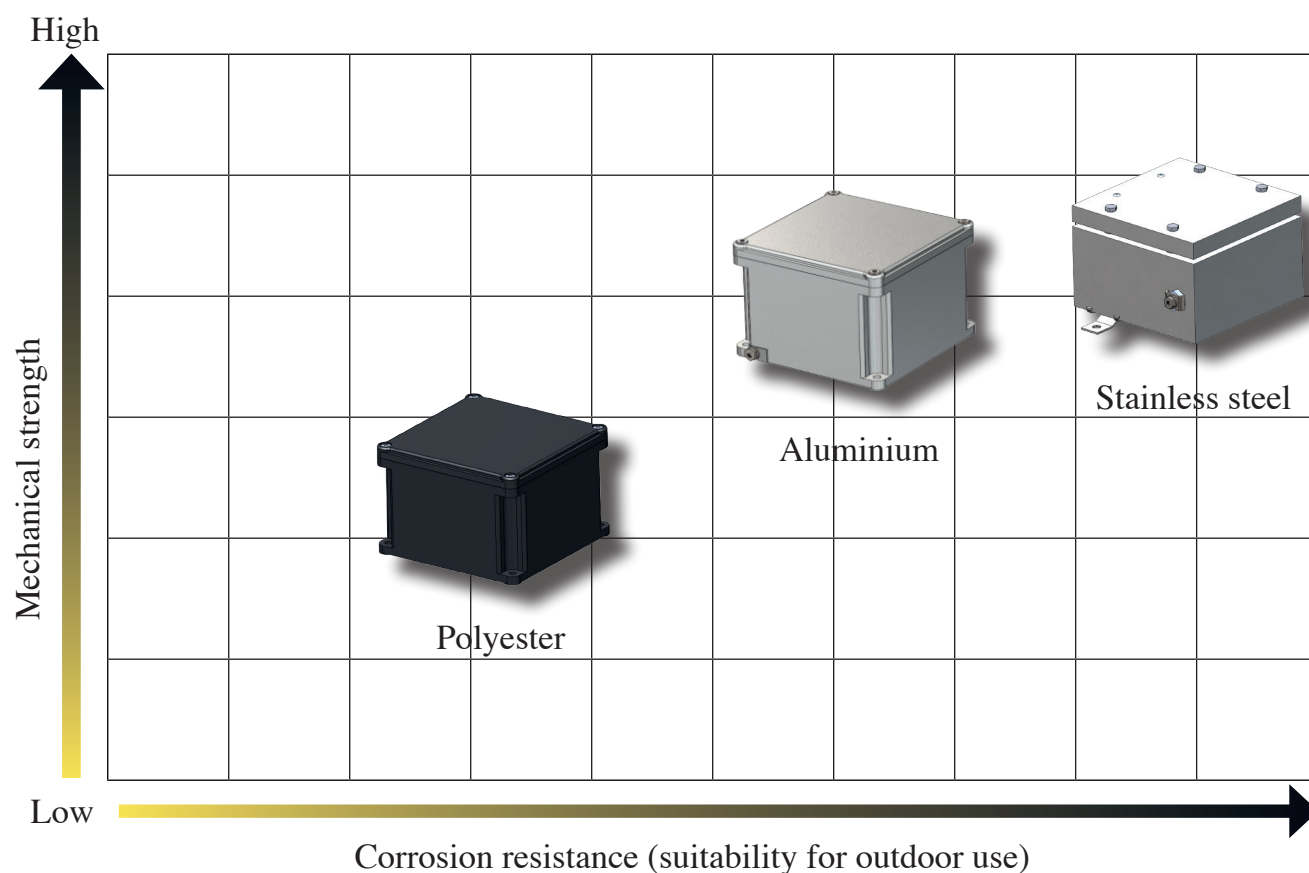

SA-P series junction boxes: criteria for choosing the right product

When it comes to deciding on an increased safety enclosure, there is a whole series of essential data to be taken into account if you are to make the right choice: the mechanical strength of the materials, corrosion resistance, the IP protection rating and IK impact protection rating in the case of enclosures for watertight/ industrial use.

Mechanical strength

Properties	Unit	Stainless steel	Aluminium	Polyester
Density	g/cm ³	8,0	2,65	1,7
Tensile strength	Mpa	500-700	80-110	130
Elongation	%	60-40	4-10	2
Modulus of elasticity	Gpa	193	79	11
Yield strength	Mpa	≥ 200	80-165	-
Coeff. of thermal expansion (20-100°C)	10 ⁻⁶ K ⁻¹	16	21	-
Resistivity	Ωm	7,5x10 ⁻⁷	4,8x10 ⁻⁸	-
Electrical conductivity	Ω ⁻¹ m ⁻¹	1,33x10 ⁶	2,08x10 ⁷	-

The graph below gives an overview of what use the various materials are suitable for based on the mechanical stress and harshness of the environmental conditions likely to be encountered.

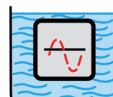

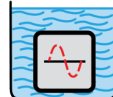

Protection ratings

IP PROTECTION RATINGS (IEC 529, EN 60529-4, CEI 70-1 ed. 11/92)

The table gives protection ratings in accordance with standard CEI 70-1 ed. 11/92. Ratings are identified by the acronym IP followed by 2 digits, to which 2 letters may be added, indicating the degree to which persons are protected against access or other properties. There is some variation in the application of ratings 7 and 8 relating to the ingress of liquids, with these ratings not always meaning that the item is suitable for lower levels (whereas IP rating x4 also covers the lower levels).

IMPACT PROTECTION RATINGS

This classification shows the acceptable level of strength, when evaluating a product's safety, and is mainly employed in relation to testing on electromechanical products.

1ST DIGIT PROTECTION AGAINST SOLID OBJECTS	2ND DIGIT PROTECTION AGAINST MOISTURE	PROTECTION AGAINST EXTERNAL MECHANICAL IMPACT *
0 Not protected 	0 Not protected 	IK00  Not protected
1 Protected against solid objects greater than 50mm in Ø 	1 Protected against vertically falling drops of water 	IK01 0.25 kg 5.6 cm  Protected against impact energy of 0.15J
2 Protected against solid objects greater than 12mm in Ø 	2 Protected against rain when tilted up to 15° 	IK03 0.25 kg 14 cm  Protected against impact energy of 0.35J
3 Protected against solid objects greater than 2.5mm in Ø 	3 Protected against rain when tilted up to 60° 	IK05 0.25 kg 28 cm  Protected against impact energy of 0.7J
4 Protected against solid objects greater than 1mm in Ø 	4 Protected against splashing water 	IK06 0.25 kg 40 cm  Protected against impact energy of 1J
5 Protected against dust 	5 Protected against jets of water from all directions 	IK07 0.5 kg 40 cm  Protected against impact energy of 2J
6 Totally protected against the ingress of dust 	6 Protected against heavy seas 	IK08 1.7 kg 30 cm  Protected against impact energy of 5J
ADDITIONAL LETTER** A Protected against access with the back of the hand B Protected against access with a finger C Protected against access with a tool D Protected against access with a wire	7 Protected against the effects of immersion 	IK09 5 kg 20 cm  Protected against impact energy of 10J
OPTIONAL LETTER H High-voltage device M Tested against the harmful effects of water ingress with the equipment running S Tested against the harmful effects of water ingress with the equipment not running W Suitable for use in specified atmospheric conditions	8 Protected against the effects of continuous immersion 	IK10 5 kg 40 cm  Protected against impact energy of 20J

* As per IEC EN 50102: 1996-05; IEC EN 60078-2-7-5: 1998-09.

** Optional letter describing protection against access by persons. Only used if protection against access to hazardous parts is greater than that indicated by the first digit, or if only protection against access to hazardous parts is given and an X is used in place of the first digit.

SA-...P series Polyester junction boxes (Ex e) and (Ex i)

SA...P series junction boxes are made from fibreglass-reinforced polyester. Because they are highly resistant to contamination from fuel oils and mechanical shock, in addition to being lightweight and practical, they can be installed in all industrial plants, especially those where there is a potential risk of explosion and/or fire due to the presence of combustible gases or dust, classified as Zone 1, 2, 21 and 22. The enclosures have special holes made in the base for easy wall mounting. The lid features a silicone gasket that is resistant to low and high temperatures and comes complete with AISI 304 stainless steel screws, which are arranged around the outside of the lid to ensure a tight seal with the IP66 rating. SA...P series enclosures are mainly used as junction boxes/ for routing cables for analogue or digital signals and/or for control and monitoring associated with equipment such as motors, fans, pumps and/or for giving physical readings such as flow rate, level, pressure, temperature, current, etc.. Terminal strips can be arranged inside the enclosure in various different configurations. The Cortem sales team will be able to advise you what enclosure best meets your needs based on: maximum number of terminals, number of holes per side, minimum distance involved and maximum power dissipation, ensuring everything is within the limits allowed by the certificate. 'Ex e' control, monitoring and signalling devices can be mounted on the lid in various different configurations based on your requirements and within the limits allowed by the certificate.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

TYPE AND APPLICATION

Choosing an appropriate container is a key step in the project development process, making it essential to approach the decision systematically, evaluating all variables methodically: where our equipment is being installed, the environmental conditions on site, what degree of protection it must have, what space is available and how it is due to be set up. Once you have processed all this information, you should be able to determine which product best suits the design requirements in question.

ENVIRONMENTAL CONDITIONS

The first factor to consider is what environmental conditions the equipment is going to be installed in, whether it will be indoors or outside, and what environments it is required to operate in: pharmaceutical, chemical, petrochemical, food, shipbuilding, agricultural industries...

DIMENSIONS

The size of the space available for inserting the enclosure and its components must be determined early on in the process.

DESIGN

Taking into account the technical aspect, product design and appearance is also important in ensuring the equipment to be installed in the enclosure is integrated seamlessly. A Cortem team of experts is on hand every day to address your questions and come up with the best solutions.

Cortem enclosures have passed:

- IP protection testing;
- IK strength testing;
- salt mist testing for corrosion resistance;
- heat resistance testing;
- low temperature resistance testing.

Application sectors:

SA-...P series Polyester junction boxes (Ex e) and (Ex i)

SA-...P series Polyester junction boxes (Ex e) and (Ex i)

GENERAL MECHANICAL PROPERTIES

Body and lid:	Made from polyester resin in black with antistatic properties
Impact protection rating:	IK10
Gasket:	Acid, hydrocarbon and high temperature-resistant silicone, located between body and lid
Mounting:	Polyester feet for M6 screws
Certification label:	Aluminium plate riveted into lid
Bolts and screws:	Stainless steel captive variety

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Possible drilling of the enclosure bottom A maximum of one hole in the center is allowed, 1" NPT o ISO M32x1,5.

Internal anti-condensation coating RAL 2004 (pure orange)

External polyester coating in different colour (specify the RAL number)

Breather valve; Drain valve

Internal mounting plate: stainless steel (code B...-229)

Earth screws in stainless steel

Terminal block mounting rails (code OBO2060/S)

ATEX-CERTIFIED TERMINALS: terminals must be chosen from the list of approved manufacturers: Cabur, Phoenix, ABB Entelec, Wago, Weidmuller. When supplied as an Ex i enclosure (for low-voltage instruments), it comes with suitably identified blue terminals.

Only use cable glands that meet ATEX, IECEx directive requirements. Use gaskets and lock nuts on entries to ensure IP66 protection.

SA-...P series Features of junction boxes with terminals

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting plates. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

	Standard applications	Signal circuits applications	
		T6/T75°C max. Tamb +60°C	T4/T100°C max. Tamb +85°C

SA-...P series Features of junction boxes with terminals

Examples of terminal strips with minimum installation distances

Notes:

Reference must be made to the minimum distances given, bearing in mind the space required for internal wiring.

Only ATEX-certified terminals are allowed inside the enclosures.

Ex i rated terminals must be suitably labelled or coloured differently so they are clearly identifiable.

Ex i cable entries must be suitably identified with either labelling or blue markings on cable glands or the enclosure's sides.

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR terminals. The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

SA-...P series Features of junction boxes with terminals

The permissible maximum power dissipation, in order to retain a T6 temperature class with an ambient temperature up to +40°C or T5 class with an ambient temperature of 55°C, is not to exceed the values given in the tables below.

For an ambient temperature of +60°C, maximum power dissipation must be reduced by 25%, and rated current reduced by 15%. The maximum current values for terminal strips used for low-voltage circuits (signalling units) with a T6 temperature class and maximum ambient temperature of +60°C or T4 and maximum ambient temperature +65°C and +85°C, are as follows:

+60°C T6 -> max 1A Ex e, max 100mA Ex ia

+85°C T4 -> max 10A Ex e, max 100mA Ex ia

The values given in the tables on the coming pages refer to the maximum number of conductors allowed for a conductor with a given cross-sectional area and a given maximum current. All incoming wires and active internal links (made by wires) count as wires. Earth connections (i.e. passive connections) do not count.

When DIN/Omega rails are installed on the internal mounting plate (instead of using the relevant mounting plate fastening holes), the number of terminals may be slightly less than the number given in the tables.

Other types of terminals can be used up to the space limit of the box. Whatever the case, all terminals used shall be ATEX and/or IEC Ex certified. Size 35mm² terminals can be used for conductors with a cross-sectional area of 25mm².

The maximum number of terminals and maximum number of rows given in the tables is an indicative value: you must take into account the cable entries on the sides of the boxes. The internal overall dimensions of cable glands/lock nuts and the overall dimensions of conductors must be taken into consideration to allow for wiring.

In some cases, it may be necessary to reduce the number of terminals or the number of rows.

Example of how to calculate the maximum number of conductors.

Referring to table SA141410/P: 6 conductors with 6mm² cross-section with 26A continuous current is the limit of this box.

Consequently, box SA141410/P is suitable for containing 3 x 6mm² terminals (2 conductors for each terminal) with a max. current of 26A.

There is space for 11 x 6mm² terminals in the box. The remaining 8 terminals (11-3) can be added and used for low-current circuits indicated in area "1" of the table (in this case max. 8-10A).

Combined mounting for electrical circuits with different sized cables is possible provided the values given are used proportionally. For example:

Nominal X-sect. area (mm ²)	Current (A)	Quantity	Capacity
2,5	8	16 (di 46)	34,8%
4	11	12 (di 36)	33,3%
10	26	4 (di 13)	30,8%
Totale			98,9% <100%

SA-...P series Features of junction boxes with terminals

Instructions for determining which enclosure is best suited based on the planned number of conductors and terminals.

 : In this section of the table that has not been filled in, once you have followed the instructions and complied with the values given for the enclosure's internal wiring, you can add as many terminals as you want up to the space limit of the box.

 : Any wiring that falls within this section of the table that has not been filled in is not covered by the certificate.

"**C. No.**" row: the values given refer to the maximum number of CABUR terminals physically allowed inside the relevant enclosure. These values are expressed as the product of the rows multiplied by the number of terminals on each row.

"**W. No.**" row: the same as above, but this time referring to Weidmuller terminals.

The terminal brands are mentioned just to give an idea of the quantity of terminals that can be housed inside the enclosure.

The other values given in the cells along the table's diagonal define the maximum number of conductors allowed, based on their cross-sectional area and maximum current.

Tables showing maximum number of conductors

$$(N^{\circ} \text{ of terminals} = \frac{n^{\circ} \text{ of conductors}}{2})$$

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using lid-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage:	600 V ac/dc
Max. current on contacts:	16 A
Rated frequency:	50 / 60Hz

MINIMUM DISTANCES BETWEEN CORTEM Ex e CONTACTS (e.g. with reference to CESI 03 ATEX 115 certificate)

Key:

1. indicator light M-0612
2. rotating selector M-0604
3. emergency stop pushbutton M-0605
4. contact block M-0530
5. contact block M-0531
6. pushbutton M-0603
7. earth bar
8. terminals
9. internal mounting plate

Notes:

"e">12mm: standard version.

Suitable for voltage U<800V

"e">5mm: special versions.

Suitable for voltage U<250V

When determining enclosure size, what holes are drilled and what devices can be installed, we also need to take into account the space required for internal wiring and running the cables.

Features of junction boxes for control, monitoring and signalling units

CTB series junction boxes: criteria for choosing the right product

When it comes to deciding on an increased safety enclosure, there is a whole series of essential data to be taken into account if you are to make the right choice: the mechanical strength of the materials, corrosion resistance, the IP protection rating and IK impact protection rating in the case of enclosures for watertight/ industrial use.

Mechanical strength

Properties	Unit	Stainless steel	Aluminium	Polyester
Density	g/cm ³	8.0	2.65	1.7
Tensile strength	MPa	500-700	80-110	130
Elongation	%	60-40	4-10	2
Modulus of elasticity	GPa	193	79	11
Yield strength	MPa	≥ 200	80-165	-
Coeff. of thermal expansion (20-100°C)	10 ⁻⁶ K ⁻¹	16	21	-
Resistivity	Ωm	7.5x10 ⁻⁷	4.8x10 ⁻⁸	-
Electrical conductivity	Ω ⁻¹ m ⁻¹	1.33x10 ⁶	2.08x10 ⁷	-

The graph below gives an overview of what use the various materials are suitable for based on the mechanical stress and harshness of the environmental conditions likely to be encountered.

Protection ratings

IP PROTECTION RATINGS (IEC 529, EN 60529-4, CEI 70-1 ed. 11/92)

The table gives protection ratings in accordance with standard CEI 70-1 ed. 11/92. Ratings are identified by the acronym IP followed by 2 digits, to which 2 letters may be added, indicating the degree to which persons are protected against access or other properties. There is some variation in the application of ratings 7 and 8 relating to the ingress of liquids, with these ratings not always meaning that the item is suitable for lower levels (whereas IP rating x4 also covers the lower levels).

IMPACT PROTECTION RATINGS

This classification shows the acceptable level of strength, when evaluating a product's safety, and is mainly employed in relation to testing on electromechanical products.

1ST DIGIT PROTECTION AGAINST SOLID OBJECTS	2ND DIGIT PROTECTION AGAINST MOISTURE	PROTECTION AGAINST EXTERNAL MECHANICAL IMPACT *
0 Not protected	0 Not protected	IK00 Not protected
1 Protected against solid objects greater than 50mm in Ø	1 Protected against vertically falling drops of water	IK01 0.25 kg 5.6 cm Protected against impact energy of 0.15J
2 Protected against solid objects greater than 12mm in Ø	2 Protected against rain when tilted up to 15°	IK03 0.25 kg 14 cm Protected against impact energy of 0.35J
3 Protected against solid objects greater than 2.5mm in Ø	3 Protected against rain when tilted up to 60°	IK05 0.25 kg 28 cm Protected against impact energy of 0.7J
4 Protected against solid objects greater than 1mm in Ø	4 Protected against splashing water	IK06 0.25 kg 40 cm Protected against impact energy of 1J
5 Protected against dust	5 Protected against jets of water from all directions	IK07 0.5 kg 40 cm Protected against impact energy of 2J
6 Totally protected against the ingress of dust	6 Protected against heavy seas	IK08 1.7 kg 30 cm Protected against impact energy of 5J
ADDITIONAL LETTER**	7 Protected against the effects of immersion	IK09 5 kg 20 cm Protected against impact energy of 10J
A Protected against access with the back of the hand	8 Protected against the effects of continuous immersion	IK10 5 kg 40 cm Protected against impact energy of 20J
B Protected against access with a finger		
C Protected against access with a tool		
D Protected against access with a wire		

OPTIONAL LETTER

H High-voltage device

M Tested against the harmful effects of water ingress with the equipment running

S Tested against the harmful effects of water ingress with the equipment not running

W Suitable for use in specified atmospheric conditions

* As per IEC EN 50102: 1996-05; IEC EN 60078-2-7-5: 1998-09.

** Optional letter describing protection against access by persons. Only used if protection against access to hazardous parts is greater than that indicated by the first digit, or if only protection against access to hazardous parts is given and an X is used in place of the first digit.

CTB... series (Ex e) and (Ex i) stainless steel junction boxes

CTB, CSTB junction box series is made from AISI 316L stainless steel sheet to ensure correct service in the aggressive environments it is installed in. With their high standard of quality and use of select raw materials processed with cutting-edge technologies, these boxes successfully withstand harsh external factors, such as water, dust, hard knocks, vibrations, corrosion and extreme fluctuations in temperature, ensuring a very long period of consistently reliable service. CTB, CSTB series enclosures are usually installed in industrial plants where there is a risk of explosion and fire, classified as Zone 1, 2, 21, 22; they are mainly used as junction boxes or for routing cables for analogue or digital signals and for control and monitoring associated with equipment such as motors, pumps...etc.. The enclosures' main purpose is to protect the components inside from external factors, such as moisture or dust, which means they must have a suitable IP rating. Cortem tests its enclosures according to standard EN 60529 in its own accredited laboratory to provide assurance that this requirement is met. Cortem works alongside customers as a reliable partner, configuring custom solutions tailored to their individual requirements and offering an extensive range of ideal products and components that are configured to produce cost-effective bespoke solutions.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

TYPE AND APPLICATION

Choosing an appropriate container is a key step in the project development process, making it essential to approach the decision systematically, evaluating all variables methodically: where our equipment is being installed, the environmental conditions on site, what degree of protection it must have, what space is available and how it is due to be set up. Once you have processed all this information, you should be able to determine which product best suits the design requirements in question.

ENVIRONMENTAL CONDITIONS

The first factor to consider is what environmental conditions the equipment is going to be installed in, whether it will be indoors or outside, and what environments it is required to operate in: pharmaceutical, chemical, petrochemical, food, shipbuilding, agricultural industries...

DIMENSIONS

The size of the space available for inserting the enclosure and its components must be determined early on in the process.

DESIGN

Taking into account the technical aspect, product design and appearance is also important in ensuring the equipment to be installed in the enclosure is integrated seamlessly. A Cortem team of experts is on hand every day to address your questions and come up with the best solutions.

Cortem enclosures have passed:

- IP protection testing;
- IK strength testing;
- salt mist testing for corrosion resistance;
- heat resistance testing;
- low temperature resistance testing.

CTB... series (Ex e) and (Ex i) stainless steel junction boxes

EXPLODED VIEW OF ACCESSORIZED CTB ENCLOSURE

MECHANICAL FEATURES

Body and lid:	AISI 316L stainless steel
Hinges:	Stainless steel AISI 316L (included on CTB series, non included on CSTB series)
Impact protection rating:	IK10
Gasket:	Resistant to acids, hydrocarbons and high temperatures, located between body and lid. Ensures consistent protection to IP66 during use
Certification label:	Stainless steel plate riveted onto lid
Removable gland plates:	Stainless steel thickness 30/10
Bolts and screws:	Stainless steel captive variety
Earth screws:	Brass. On inside and outside of body complete with anti-rotation brackets
Mounting:	Welded AISI 316L stainless steel feet

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Body and cover thickness of 3 mm (Code CTB262616/**3**) Please refer to the sales offices for availability

Possible drilling of the enclosure bottom

Internal anti-condensation coating RAL 2004 (pure orange)

External polyester coating in different colour (specify the RAL number)

Breather valve; Drain valve

Internal mounting plate: stainless steel (code B...-443)

Earth screws in stainless steel

Terminal block mounting rails (code OBO2060/S)

Padlocking system; padlock (code VIRO552)

ATEX-CERTIFIED TERMINALS: terminals must be chosen from the list of approved manufacturers: Cabur, Phoenix, ABB Entelec, Wago, Weidmuller. When supplied as an Ex i enclosure (for low-voltage instruments), it comes with suitably identified blue terminals.

Hole options: through holes with no threading

Only use cable glands that meet ATEX, IECEx directive requirements. Use gaskets and lock nuts on entries to ensure IP66 protection.

Simplified system for lid fixing with key locking system Double Beard type:

(Example of order code CTB484816C)

Installation of one key locking system up to model CTB262620

Installation of two key locking systems up to model CTB624520

CTB... series (Ex e) and (Ex i) stainless steel junction boxes

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting plates. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

CTB... series Features of junction boxes with terminals

Examples of terminal strips with minimum installation distances

Notes:

Reference must be made to the minimum distances given, bearing in mind the space required for internal wiring.

Only ATEX-certified terminals are allowed inside the enclosures.

Ex i rated terminals must be suitably labelled or coloured differently so they are clearly identifiable.

Ex i cable entries must be suitably identified with either labelling or blue markings on cable glands or the enclosure's sides.

Eg. 2x22 = 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR and/or WEIDMULLER terminals. The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

CTB... series Features of junction boxes with terminals

The permissible maximum power dissipation, in order to retain a T6 temperature class with an ambient temperature up to +40°C or T5 class with an ambient temperature of 55°C, is not to exceed the values given in the tables below.

For an ambient temperature of +60°C or +65°C, maximum power dissipation must be reduced by 25%, and rated current reduced by 15%.

The maximum current values for terminal strips used for low-voltage circuits (signalling units) with a T6 temperature class and maximum ambient temperature of +60°C or T4 and maximum ambient temperature +65°C and +85°C are as follows:

+60°C T6 -> max 1A Ex e, max 100mA Ex ia

+85°C T4 -> max 10A Ex e, max 100mA Ex ia

The values given in the tables on the coming pages refer to the maximum number of conductors allowed for a conductor with a given cross-sectional area and a given maximum current. All incoming wires and active internal links (made by wires) count as wires. Earth connections (i.e. passive connections) do not count.

When DIN/Omega rails are installed on the internal mounting plate (instead of using the relevant mounting plate fastening holes), the number of terminals may be slightly less than the number given in the tables.

Other types of terminals can be used up to the space limit of the box. Whatever the case, all terminals used shall be ATEX and/or IEC Ex certified. Size 35mm² terminals can be used for conductors with a cross-sectional area of 25mm².

The maximum number of terminals and maximum number of rows given in the tables is an indicative value: you must take into account the cable entries on the sides of the boxes. The internal overall dimensions of cable glands/lock nuts and the overall dimensions of conductors must be taken into consideration to allow for wiring.

In some cases, it may be necessary to reduce the number of terminals or the number of rows.

Example of how to calculate the maximum number of conductors.

Referring to table CTB262620: 6 conductors with 6mm² cross-section with 26A continuous current is the limit of this box. Consequently, box CTB262620 is suitable for containing 3 x 6mm² terminals (2 conductors for each terminal) with a max. current of 26A.

There is space for 32 x 6mm² terminals in the box. The remaining 29 terminals (32-3) can be added and used for low-current circuits indicated in the "yellow-coloured" area of the table (in this case max. 8-10A).

Combined mounting for electrical circuits with different sized cables is possible provided the values given are used proportionally. For example:

Nominal X-sect. area (mm ²)	Current (A)	Quantity	Capacity
2,5	8	16 (di 46)	34,8%
4	11	12 (di 36)	33,3%
10	26	4 (di 13)	30,8%
		Total	98,9% <100%

CTB... series Features of junction boxes with terminals

Instructions for determining which enclosure is best suited based on the planned number of conductors and terminals.

 : In this section of the table that has not been filled in, once you have followed the instructions and complied with the values given for the enclosure's internal wiring, you can add as many terminals as you want up to the space limit of the box.

 : Any wiring that falls within this section of the table that has not been filled in is not covered by the certificate.

"**C. No.**" row: the values given refer to the maximum number of CABUR terminals physically allowed inside the relevant enclosure. These values are expressed as the product of the rows multiplied by the number of terminals.

"**W. No.**" row: the same as above, but this time referring to Weidmuller terminals.

The terminal brands are mentioned just to give an idea of the quantity of terminals that can be housed inside the enclosure.

The other values given in the cells along the table's diagonal define the maximum number of conductors allowed, based on their cross-sectional area and maximum current.

Tables showing maximum number of conductors

$$\left(N^{\circ} \text{ of terminals} = \frac{n^{\circ} \text{ of conductors}}{2} \right)$$

ATEX - IECEx label for terminal enclosures

Diagram of an ATEX-IECEx label for terminal enclosures. The label contains the following information:

- 1:** Manufacturer logo and name: CORTEM SpA, VIA AQUILEIA, 10 - 34070 VILLESSE - GO - ITALY
- 2:** Enclosures with terminals: 20
- 3:** S.N. (Serial Number) field
- 4:** Ta (Ambient temperature) field
- 5:** Temperature class and maximum surface field
- 6:** Temperature of cables field
- 7:** Electrical specs per certificate field

Additional information on the label includes:

- CEI 03 ATEX 333
- IECEx CES 13.0001
- Ex II 2GD Ex e IIC T Gb
- Ex tb IIC T °C Db IP66
- Ex tb IIC T °C Db IP66
- n° terminals
- max wire section (mm²)
- max current
- U-386
- Made In ITALY
- WARNING - DO NOT OPEN when energized

Data filled in:

1. year of manufacture
2. serial number
3. product code
4. ambient temperature
5. temperature class and maximum surface
6. temperature of cables
7. electrical specs per certificate

TYPICAL EXAMPLES OF TERMINAL BLOCK INSTALLATION

Example of feed-through terminal installation on top hat rail fastened to stainless steel internal mounting plate.

Example of feed-through terminal installation on top hat rail fastened on two pre-drilled mounting rails.

DON'T FORGET TO ORDER THE ACCESSORIES

Example: Enclosure type CTB484820 + Terminal mounting rails OBO2060/S + Cable glands, unions + other...see key

JUNCTION BOXES WITH EQUIPMENT (FIELDBUS, PROXIMITOR, HEATER...)

Example of junction box with thermostat

Example of junction box with proximitor

Example of junction box with transmitter

Equipment that can be installed in the junction boxes in accordance with the CML 16 ATEX 3163X or IECEx CML 16.0074X certificate are described in the following table:

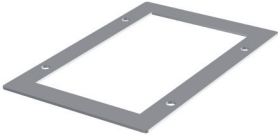

Part	Number of certificate	Marking
Series 3300XL Proximitor	BAS 99 ATEX 1101 IECEx BAS 04.0055X	Ex ia IIC
Splice Cassette type 8186	PTB 10 ATEX 2015U IECEx PTB 10.0060U	Ex op pr IIC
Enclosure Heater (TEF Series)	NEMKO 11 ATEX 1098X IECEx NEM 11.0005X	Ex e IIC; Ex e mb IIC
Heater, type SL.. THERM D.. T..	PTB 02 ATEX 1116X IECEx PTB 07.0055X	Ex db IIC; Ex tb IIIC
Heater, type CP.. THERM D.. T..	PTB 02 ATEX 1041X IECEx PTB 07.0052X	Ex db IIC; Ex tb IIIC
Fieldbus Segment protector type R-SP-E	PTB 04 ATEX 2100X IECEx PTB 05.0010X	Ex e mb IIC; Ex eb mb IIC
Temperature Trasmitter Model IPAQ C202X	KIVA 15 ATEX 0033X IECEx KIWA 15.0015X	Ex ia IIC
Temperature Trasmitter Model IPAQ C520X	KIVA 14 ATEX 0003X IECEx KIWA 14.0001X	Ex ia IIC
Fieldbus Barrier type R4D0-FB-IA	BVS 13 ATEX E 121X IECEx BVS 13.0119X	Ex e ib mb [ia Ga] IIC T4 Gb Ex e ib mb [ia IIIC Da] IIC T4 Gb
Heating Resistor type CREx 020	LCIE 01 ATEX 6073X IECEx LCI 07.0020X	Ex d IIC; Ex tb IIIC
Regulating Thermostat type REX	LCIE 01 ATEX 6074 IECEx LCI 07.0021	Ex d IIC; Ex tb IIIC
Interconnection block for fieldbus type F240 to F273	KEMA 03 ATEX 1555X IECEx LCI 11.0068X	Ex ia IIC
Fieldbus XE Megablock and Terminator	KEMA 05 ATEX 2006 IECEx DEK 16.0036X	Ex eb mb IIC
Model 644R HART Temperature Transmitter	BAS 00 ATEX 1033X IECEx BAS 07.0053X	Ex ia IIC
Model 644H Fieldbus Temperature Trasmitter	BAS 03 ATEX 0499X IECEx BAS 07.0053X	Ex ia IIC
Enhanced model 644 Temperature Transmitter	BAS 12 ATEX 0101X IECEx BAS 12.0069X	Ex ia IIC
Transmitter Type T32..**.*.*	BVS 08 ATEX 019X IECEx BVS 08.0018X	Ex ia IIC
Load isolation Switch Module CZ0513 Series	CML 19 ATEX 1179U IECEx CML 19.0055U	Ex db eb IIC Gb
Handle of switch CZ8000	CML 17 ATEX 3102U IECEx CML 17.0042U	Ex eb IIC; Ex tb IIIC
Operators M-0603, M-0604, M-0605	CESI 09 ATEX 075U IECEx CES 11.0029U	Ex eb IIC; Ex tb IIIC
Pilot LED M-0612 and M-0487	CESI 09 ATEX 060U IECEx CES 11.0030U	Ex db IIC; Ex db eb IIC; Ex tb IIIC
Contact blocks type M-0530 and M-0531	CESI 09 ATEX 016U IECEx CES 11.0031U	Ex de IIC
Ammeter type B-0140A and Voltmeter B-0140V	CESI 04 ATEX 128U IECEx CES 12.0022U	Ex e IIC; Ex tb IIIC
Temperature transmitter iTEMP Type TMT82..A1/2 and TMT82..A3/4/5	EPS 17 ATEX 1074X IECEx EPS 17.0039X	Ex ia IIC
Surge protector type Blitzductor Connect BCO *L2 BD EX 24	TUV 19 ATEX 8476X IECEx TUR 20.0025X	Ex ia [ia Ga] IIC Gb; Ex ib IIC T6 Gb; [Ex ia Da] IIIC

CTB... series (Ex e) and (Ex i) stainless steel junction boxes

Zone 1,2,21,22.
Degree of protection IP66.
Stainless steel body and lid.
Acid/hydrocarbon-resistant gasket.
Stainless steel bolts and screws.
Impact protection IK10.

Ordering details

Standard stainless steel enclosure: **CSTB121208**

Width/Depth/Height: **120/120/80mm**

Certification data for enclosures with terminals

Group II Category 2GD

Zone 1 - Zone 2 (Gas) Zone 21 - Zone 22 (Dust)

II 2GD Ex eb IIC T.. Gb - Ex tb IIIC T.. Db IP66

II 2GD Ex ia IIC T.. Gb - Ex ia IIIC T.. Db IP66

II 2GD Ex eb ia IIC T.. Gb - Ex tb ia IIIC T.. Db IP66

Ambient temperature: -40°C +55°C (+40°C)

Certification:

CESI 03 ATEX 333 (ATEX)

CESI 03 ATEX 115 X (ATEX)

IEC Ex CES 13.0001 (IECEX)

Russian (TR CU)

Brazilian (INMETRO)

Accessories

	CODE
Breather and drain valve:	ECD-210S

Other:

Internal anti-condensation coating
External epoxy coatings in different colour
Body and cover thickness of 3 mm
M6 or M8 through earth connection
Possible drilling of the enclosure bottom
Key locking system

Max. number of terminals

X-SECT.	QTY.
1.5 mm ²	8
2.5 mm ²	5

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR and/or WEIDMULLER terminals.

The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

Number of cable glands

Standard enclosure		
Hole type	A/C	B/D
M16	2	3
M20	2	3
M25	2	3

Research conducted using Cortem's new NAV and NEV series cable glands.

As required by the current standard, holes can be drilled by Cortem or by authorized partners who hold a production notification in accordance with ATEX Directive .

CTB... series (Ex e) and (Ex i) stainless steel junction boxes

Zone 1,2,21,22.

Degree of protection IP66.

Stainless steel body and lid.

Acid/hydrocarbon-resistant gasket.

Stainless steel bolts and screws.

Impact protection IK10.

Brazilian (INMETRO)

Accessories

	CODE
1.5mm-thick stainless steel internal mounting plate:	B50-443
Terminal block mounting rails:	OBO2060/S
Breather and drain valve:	ECD-210S

Other:

Padlocking system
Internal anti-condensation coating
External epoxy coatings in different colour
Body and cover thickness of 3 mm
Clip for grouping cables in single bundle
M6 or M8 through earth connection
Possible drilling of the enclosure bottom
Key locking system

Ordering details for boxes with removable gland plates

Removable gland plate position coding

Ordering code examples

1) CTB503516S3

500x350x160 stainless steel box with 3 removable gland plates

2) CTB624520S4

620x450x205 stainless steel box with 4 removable gland plates

Max. number of terminals

X-SECT.	QTY.
2.5 mm ²	2x73
4 mm ²	2x61
6 mm ²	2x46
10 mm ²	2x36
16 mm ²	2x30
25 mm ²	2x22
70 mm ²	2x17
185 mm ²	10
300 mm ²	6

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR and/or WEIDMULLER terminals.

The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

Number of cable glands

Standard enclosure			With removable gland plates		
Hole type	A/C	B/D	Hole type	A/C	B/D
M20	21	33	M20	21	24
M25	18	27	M25	17	18

CTBE... series (Ex e) and (Ex i) stainless steel junction boxes

After carefully analysing the value of the existing CTB enclosure product line and taking into account the two cornerstones of any product: cost and innovation, the product manager at Cortem has re-examined the existing solution and come up with a new range of structurally simpler enclosures, made from stainless steel. The aim was to simplify and streamline installation of these increased-safety or intrinsically safe enclosures in an electrical system. Our ongoing commitment to improving cost efficiency, speed, reliability and quality gradually and simultaneously across the full production chain means that we are delivering new products which are increasingly competitive, innovative and in line with the most precise, targeted requests from the oil and gas market.

Our range of simplified CTBE enclosures are made from AISI 316L stainless steel sheet metal to ensure that they perform in the aggressive environments in which they are installed. These enclosures can be used in industrial plants where there is a risk of explosion and fire, classified as zone 1, 2, 21 or 22. They are mainly used as junction boxes or for routing cables for analogue or digital signals. The main purpose of these enclosures is to protect the components inside from external agents, such as moisture or dust, meaning they must have a suitable IP rating. Cortem tests its enclosures according to standard EN 60529 at its own accredited facilities to ensure that this requirement is met. Cortem is a reliable partner for its customers, configuring customised solutions tailored to individual requirements and offering an extensive range of products and components to produce cost-effective bespoke systems.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

CTBE... series (Ex e) and (Ex i) stainless steel junction boxes

MECHANICAL FEATURES

Body and lid:	AISI 316L stainless steel
Gasket:	Resistant to acids, hydrocarbons and high temperatures, located between body and lid. Ensures consistent protection to IP66 during use
Certification label:	Stainless steel plate riveted onto lid
Bolts and screws:	Stainless steel
Earth screws:	Stainless steel. On inside and outside of body complete with anti-rotation brackets
Mounting:	AISI 316L stainless steel feet

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Internal anti-condensation coating RAL 2004 (pure orange)

External epoxy coating in different colour (specify the RAL number)

Possible drilling of the enclosure bottom

Breather valve Code ECD-210S; Drain valve code ECD-210S

Internal mounting plate: stainless steel (code B...-484)

Earth screws in stainless steel

Terminal block mounting rails (code OBO2060/S)

ATEX-CERTIFIED TERMINALS: terminals must be chosen from the list of approved manufacturers: Cabur, Phoenix, ABB Entelec, Wago, Weidmuller. When supplied as an Ex i enclosure (for low-voltage instruments), it comes with suitably identified blue terminals.

Hole options: through holes with no threading

Only use cable glands that meet ATEX, IECEx directive requirements. Use gaskets and lock nuts on entries to ensure IP66 protection.

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting plates. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

Rated voltage: 1000 V
Rated frequency: 50 / 60 Hz

Modular terminals

Terminal cross-sectional area: 1.5; 2.5; 4; 6; 10; 25; 35; 70; 95; 120; 185; 240; 300 [mm²]
Rated current: 8 - 400 [A]

Marking	Terminal type	Description
Ex II 2GD Ex e IIC T... Gb - Ex tb IIIC T... Db IP66	Ex e terminals only	Enclosures containing increased safety terminals to standard EN 60079-7
Ex II 2GD Ex e ia IIC T... Gb - Ex tb ia IIIC T... Db IP66	Ex e and Ex i terminals	Enclosures containing increased safety terminals and intrinsic safety terminals to standards EN 60079-7 and EN 60079-11
Ex II 2GD Ex ia IIC T... Gb - Ex ia IIIC T... Db IP66	Ex i terminals only	Enclosures containing intrinsic safety terminals to standard EN 60079-11; enclosures are still category 2

Examples of terminal strips with minimum installation distances

Notes:

Reference must be made to the minimum distances given, bearing in mind the space required for internal wiring.

Only ATEX-certified terminals are allowed inside the enclosures.

Ex i rated terminals must be suitably labelled or coloured differently so they are clearly identifiable.

Ex i cable entries must be suitably identified with either labelling or blue markings on cable glands or the enclosure's sides.

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR and/or WEIDMULLER terminals. The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

CTBE... series Features of junction boxes with terminals

The permissible maximum power dissipation, in order to retain a T6 temperature class with an ambient temperature up to 40°C or T5 class with an ambient temperature of 55°C, is not to exceed the values given in the tables below.

For an ambient temperature of +60°C or +65°C, maximum power dissipation must be reduced by 25%, and rated current reduced by 15%.

The maximum current values for terminal strips used for low-voltage circuits (signalling units) with a T6 temperature class and maximum ambient temperature of +60°C are as follows:

- 1 A for Ex e circuits;
- 100mA for Ex ia circuits.

The values given in the tables on the coming pages refer to the maximum number of conductors allowed for a conductor with a given cross-sectional area and a given maximum current. All incoming wires and active internal links (made by wires) count as wires. Earth connections (i.e. passive connections) do not count.

When DIN/Omega rails are installed on the internal mounting plate (instead of using the relevant mounting plate fastening holes), the number of terminals may be slightly less than the number given in the tables.

Other types of terminals can be used up to the space limit of the box. Whatever the case, all terminals used shall be ATEX and/or IEC Ex certified. Size 35mm² terminals can be used for conductors with a cross-sectional area of 25mm².

The maximum number of terminals and maximum number of rows given in the tables is an indicative value: you must take into account the cable entries on the sides of the boxes. The internal overall dimensions of cable glands/lock nuts and the overall dimensions of conductors must be taken into consideration to allow for wiring.

In some cases, it may be necessary to reduce the number of terminals or the number of rows.

Example of how to calculate the maximum number of conductors.

Referring to table of the maximum number of conductors for CTB262620: 6 conductors with 6mm² cross-section with 26A continuous current is the limit of this box. Consequently, box CTB262620 is suitable for containing 3 x 6mm² terminals (2 conductors for each terminal) with a max. current of 26A.

There is space for 32 x 6mm² terminals in the box. The remaining 29 terminals (32-3) can be added and used for low-current circuits indicated in the "yellow-coloured" area of the table (in this case max. 8-10A).

Combined mounting for electrical circuits with different sized cables is possible provided the values given are used proportionally. For example:

Nominal X-sect. area (mm ²)	Current (A)	Quantity	Capacity
2.5	16	10 (out of 30)	33%
16	50	12 (out of 48)	25%
25	63	36 (out of 90)	40%
Total			98% <100%

CTBE... series Features of junction boxes with terminals

Instructions for determining which enclosure is best suited based on the planned number of conductors and terminals.

 : In this section of the table that has not been filled in, once you have followed the instructions and complied with the values given for the enclosure's internal wiring, you can add as many terminals as you want up to the space limit of the box.

 : Any wiring that falls within this section of the table that has not been filled in is not covered by the certificate.

"C. No." row: the values given refer to the maximum number of CABUR terminals physically allowed inside the relevant enclosure. These values are expressed as the product of the rows multiplied by the number of terminals.

"W. No." row: the same as above, but this time referring to Weidmuller terminals.

The terminal brands are mentioned just to give an idea of the quantity of terminals that can be housed inside the enclosure.

The other values given in the cells along the table's diagonal define the maximum number of conductors allowed, based on their cross-sectional area and maximum current.

Tables showing maximum number of conductors

$$(N^{\circ} \text{ of terminals} = \frac{n^{\circ} \text{ of conductors}}{2})$$

ATEX - IECEx label for terminal enclosures

Diagram of an ATEX-IECEx label for terminal enclosures. The label contains the following information:

- 1:** Manufacturer logo and name (CORTEM SpA).
- 2:** Enclosures with terminals.
- 3:** Serial number (s.n.).
- 4:** Temperature class (Ta).
- 5:** IECEx certification (IECEx CES 13.0001).
- 6:** Ex tb IIIC T [] °C Db IP66.
- 7:** n° terminals.

Other fields include: Max wire section (mm²), max current, and a warning: WARNING - DO NOT OPEN when energized.

Data filled in:

1. year of manufacture
2. serial number
3. product code
4. ambient temperature
5. temperature class and maximum surface
6. temperature of cables
7. electrical specs per certificate

This image shows a full page of blank graph paper. The background is a solid light blue color. Overlaid on this background is a precise grid of thin, dark gray horizontal and vertical lines. These lines intersect to form a continuous pattern of small, identical squares across the entire surface of the page. There are no margins, text, or other markings present.

M-0

The new Cortem M-0 series control, monitoring and signalling devices are installed as external accessories on 'Ex e' enclosures and boards used in any industrial environment where an explosive atmosphere may be present, classified as Zone 1, 2, 21, 22. M-0 control devices can be used to close or open electrical or mechanical devices fitted inside the 'Ex e' enclosures while the signalling devices feature lights to indicate their operating status. The control and signalling device components are made from stainless steel to deliver unbeatable efficiency under any environmental conditions. Levers are made from aluminium while the plastic parts on push-buttons are designed to provide lengthy service life even when used in a highly corrosive atmosphere. M-0 control and signalling devices have an IP66 protection rating.

CONTACT FEATURES

Rated voltage: 690 V
Frequency: 50/60 Hz
Capacity: 10 A

Rated operating voltage							
400 V	500 V	690 V	400 V	400 V	400 V	48 V	230 V
Utilization category							
AC-15	AC-15	AC-15	AC-1	AC-2	AC-3	DC-13	DC-13
Rated operating currents							
10 A	4 A	2 A	16 A	6 A	2,4 A	10 A	0,5 A

Connection: max. 2.5 mm²
Rated impulse withstand voltage: 4 kV
Pollution degree: 2
Conditional short-circuit current: 1 kA
Maximum use of short-circuit protection devices: one 10A 500V gG fuse on each conductor
Minimum travel for positive opening: 3 mm
Minimum actuation force required to achieve positive opening of all opening contacts: 5 N
Maximum travel (+ overtravel): 4.75 Hz
Body: Polyamide
Contacts: Brass
Pins, springs and screws: Stainless steel
Weight: 40 g

The new slot-in adapter system makes light work of fitting contacts in control panels with walls up to 7 mm thick. In addition, with the mushroom-head push-button having a smaller diameter thread (M32x1.5), the lid can accommodate a larger number of control and signalling devices than with the previous version.

Option of using up to 4 contacts per device for push-button M-0603 and selector M-0604. Option of using up to 2 contacts per device for emergency stop push-button M-0605.

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Padlocking system for selector (codes **M-962** and **M-963**)
 Padlocking system for push-button (code M-0603/..L)
 Padlocking for mushroom-head push-button (code **M-0615**)
 Black mushroom-head push-button (code M-0605/N)
 Earthing ring for installing control and signalling devices on polyester lids (code **A331IB**)

Push-button M-0603

Range of push-buttons designed to allow installation of a high number of lid-mounted control and signalling devices. Available with caps made from polyamide 6 in different colours and in padlockable version. Option, for all control and signalling devices, of attaching nameplates on the lid with size and wording produced to customer specifications.

CODE	DESCRIPTION	NOTES
M-0603/N	Black Ex e push-button without contacts	Add the required contact assembly

Hole drilling arrangement (minimum distances)

Emergency stop push-button M-0605

The emergency stop push-button allows operators to stop machinery safely by pushing the button. Model M-0605/K comes with 2 keys, allowing you to lock the push-button in place.

CODE	DESCRIPTION	NOTES
M-0605	Ex e emergency stop push-button with release without contacts	You will need to add required contact assembly
M-0605/K	Ex e emergency stop push-button with key release without contacts	You will need to add required contact assembly
M-0605/P	Ex e push-pull, stop push-button without contacts	You will need to add required contact assembly
M-0606/10	1NO contact assembly	
M-0606/01	1NC contact assembly	
M-0606/11	1NO + 1NC contact assembly	
M-0606/20	2NO contact assembly	
M-0606/02	2NC contact assembly	

Available with model M-0605/K

Front part of push-button M-0605 comprising:

- body
- mushroom-head push-button
- O-ring
- moving part
- lock nut

M-0530 and/or M-0531 contact block
Marking Ex II 2G Ex de IIC (CESI 09 ATEX 016U)

Hole drilling arrangement (minimum distances)

* Standard drilling layout.
Option of using up to 2 contacts per device for emergency stop push-button M-0605.

Multi-LED indicator M-0612/3

Multi-LED indicators come with lenses in different colours and different voltage options. Easy to install and wire, offering lasting reliability with a LED service life of 50,000 hours.

CODE	DESCRIPTION	NOTES

ORIGINAL PRODUCT

Series EJBE, EJBXE Control boards

The control, monitoring and distribution boards in 'Ex de' execution of the EJBE series, in aluminium and stainless steel, and the EJBXE series, in stainless steel, were designed to meet specific installation requirements in environments with an explosion risk. In fact they allow you to install electric components such as switches, inverters, fuses, relays, etc. in 'Ex d' enclosures to develop the control, monitoring and signalling units, housing the auxiliary terminal block in intrinsically safe 'Ex e' enclosures.

EJBE control boards consist of an 'Ex d' enclosure of the EJB series, in aluminium alloy, and an 'Ex e' enclosure of the CTB series in stainless steel. Whereas EJBXE control boards consist of an 'Ex d' enclosure of the EJBX series and an 'Ex e' enclosure of the CTB series in stainless steel. This fully stainless steel structure is suitable for especially difficult environments, such as marine environments, which require greater protection against corrosion. 'Ex d' enclosures are mechanically linked to 'Ex e' enclosures by means of a flange and electrically linked by Cortem TP sealed bushings in nickel plated brass or in stainless steel. The number and diameter of the sealed bushings varies depending on the size of the enclosures and the number and cross-section of the cables. The IP protection between two enclosures is guaranteed by a flat silicone gasket resistant to acids, to hydrocarbons and to high and low temperatures. The lids of the 'Ex d' enclosures can be supplied with a tempered glass window to see and monitor the electric equipment inside.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

This equipment can be used in an environment with an explosive atmosphere and with the presence of hydrogen.

Stainless steel properties: The stainless steel used by Cortem to produce enclosures and accessories designed for use in cryogenic plants and highly corrosive environments is a very low carbon Iron-Chromium-Nickel-Molybdenum alloy. This alloy is highly resistant to intergranular (or intercrystalline) corrosion and to pitting corrosion. It is classified as an austenitic stainless steel UNI EN 10088-3 X 2 CrNiMo 17-12-2-E or AISI 316L according to the American Iron and Steel Institute. Its main quality is the spontaneous formation of a thin layer of chromium oxide on the surface that protects the metal underneath from corrosion attack. In addition, even if the metal is inadvertently damaged by abrasion or scratches, this film is self-renewing.

Corrosion Resistance:

Low copper content aluminium alloy

Cast, in stainless steel for new models

Acid, hydrocarbon and high temperature-resistant silicone, located between body and lid

Adhesive label located inside on empty enclosures; aluminium label riveted onto lid on other versions

Stainless steel

Stainless steel M6. On inside and outside of body and on lid complete with anti-rotation brackets

Electrogalvanised steel

Polyester coating Ral 7035 (light grey)

The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

EJBXE

'Ex d' stainless steel enclosure:

Body and lid:

Hinges:

Treatment:

Gasket:

Certification label:

Bolts and screws:

Earth screws:

Mounting brackets:

AISI 316L stainless steel

Lost-wax cast and welded onto enclosure

Quartz sand blasting

Acid, hydrocarbon and high temperature-resistant silicone, located between body and lid

Adhesive label located inside on empty enclosures; stainless steel label riveted onto lid on other versions

Stainless steel

Stainless steel M6. On inside and outside of body and on lid complete with anti-rotation brackets

4 feet welded onto body

ENCLOSURE CONNECTION

Connection made with Cortem TP sealed bushings in nickel plated brass or stainless steel. The number and diameter of the sealed bushings are determined based on the number and cross-sections of the bushing cables. The IP protection between enclosures is guaranteed by a flat silicone gasket.

Series EJBE, EJBXE Control boards

Ex e enclosure:

Body and lid:

Hinges:

Impact protection rating:

Gasket:

AISI 316L stainless steel

AISI 316L stainless steel

IK10

Acid, hydrocarbon and high temperature-resistant silicone, located between body and lid.

Removable gland plates: Stainless steel thickness 30/10

Bolts and screws: Stainless steel captive variety

Earth screws: Stainless steel. On inside and outside of body complete with anti-rotation brackets

ACCESSORIES AVAILABLE / SPECIAL REQUESTS

For aluminium 'Ex d' enclosure:

Internal anti-condensation coating RAL 2004 (pure orange)

External polyester coating in different colour (specify the RAL number)

Rectangular windows on lid (see section Enclosures with windows for inspection and reading instruments)

Internal mounting plate: 25/10-thick aluminium (code BFE-...).

2.5mm-thick electrogalvanised steel (code BFE-...AC)

For stainless steel 'Ex d' enclosure:

Internal mounting plate in 25/10-thick stainless steel (code BFE-...SS). See accessories section

Enclosures with windows on lid for instrument viewing / reading (see section Enclosures with windows for inspection and reading instruments)

External coating in different colour (specify the RAL number)

For "Ex e" enclosure:

Internal anti-condensation coating RAL 2004 (pure orange)

External polyester coating in different colour (specify the RAL number)

Internal mounting plate: stainless steel (code B...-443)

Terminal block mounting rails (code OBO2060/S)

Enclosure with removable gland (e.g. code EJBE-5BS1)

Padlocking system. Padlock (code VIRO552)

ATEX-CERTIFIED TERMINALS: terminals must be chosen from the list of approved manufacturers: Cabur, Phonix, ABB Entrelec, Wago, Weidmuller.

When supplied as an Ex i enclosure (for low-voltage instruments), it comes with suitably identified blue terminals. DIN rail.

Hole options: through holes with no threading

Only use cable glands that meet ATEX, IECEx directive requirements. Use gaskets and lock nuts on entries to ensure IP66 protection.

Applications with radio source antennas.

Possibility of using different sealed bushings, certified separately (ext. n.01/13 CESI 12 ATEX 026).

FEATURES OF EJBE-...I, EJBXE-...I ENCLOSURES FOR INTERFACE UNITS

These models are suited to be fitted inside active and passive barriers certified individually with protection '[Ex ia] + H2' suitable for gas groups IIB and IIC.

The active or passive barriers can be installed inside aluminium 'Ex d' (EJBE-...I) or stainless steel (EJBXE-...I) enclosures. The entire assembly complete with interface unit will then have 'Ex de [ia] IIB + H2' execution.

The active and passive barriers allowed to be installed inside the enclosure must have the ATEX certification in compliance with standards EN60079-0, EN60079-11 or IECEx in compliance with standards IEC60079-0 and IEC60079-11 and must respect the distances shown in the figure.

Maximum dimensions of 'Ex ia' equipment that can be installed inside the enclosures.

Examples of installation of associated equipment - minimum distances.

Example of interface unit (with associated equipment) complete with separator

Example of interface unit without separator

NOTES:

(*) 50 mm is the minimum safe distance between 'Ex i' components and non-'Ex i' components (and/or conducting parts).

- The maximum voltage entering barriers on non-'Ex i' circuits must be less than 250 V.

- Further useful information regarding installation and wiring of these components are contained in the file of the EJB series enclosures.

Series EJBE, EJBXE Control boards

Example of control board with Cortem control and signalling devices installed on 'Ex e' enclosure an internal electrical equipment

Notes:

Option of using up to 4 contacts per device for pushbutton M-0603 and selector M-0604.
For more information, refer to the Ex e control, monitoring and signalling devices chapter.

MINIMUM DISTANCES BETWEEN CORTEM 'Ex e' CONTROL AND SIGNALLING DEVICES FOR PUSHBUTTON PANELS

Distances for control and signalling devices with 2 and/or 4 contacts

Distances for indicator lights

ANTENNAS AND RADIO SOURCES

Example of typical antenna plus coaxial cable connection at enclosure inlet.

Execution with cable inlet in 'Ex d' enclosure

Notes:

1. The antennas used must comply with indications in EN / IEC 60079-0 or be installed in a safe area.
2. The accessories used for cable inlet must comply with standards EN / IEC 60079-0, EN / IEC 60079-1 and EN / IEC 60079-14.

FEATURES OF ENCLOSURES WITH EJBE WINDOW

According to customer requirements, standard windows are available with tempered glass for the different types of 'Ex d' aluminium enclosures used for example for viewing analogue or digital instruments, various types of indicators or actuators from touch screen keyboards.

DIMENSIONAL DRAWING OF ENCLOSURES WITH WINDOW

Position of standard window in middle.

Non-standard window positioning or dimensions on request

Several windows can also be made on the same lid, always keeping in mind the maximum size MxL.

M-0

M-0 series control, monitoring and signalling devices are installed as external accessories on Cortem 'Ex d' enclosures used in any industrial environment where an explosive atmosphere may be present, classified as Zone 1, 2, 21, 22. M-0 control devices can be used to close or open electrical or mechanical devices fitted inside the 'Ex d' enclosures while the signalling devices feature lights to indicate their operating status. The control and signalling device components are made from stainless steel to deliver unbeatable efficiency under any environmental conditions. Levers are made from aluminium while the plastic parts on push-buttons are designed to provide lengthy service life even when used in a highly corrosive atmosphere. M-0 control and signalling devices have an IP66 protection degree.

CERTIFICATION DATA FOR CONTROL DEVICES

Classification:	Group 2	Category 2D		
Installation: EN 60079.14	zone 21 - zone 22 (Dust)			
Marking:	CE 0722 Ex II 2D Ex tb IIC Db IP66			
Certification:	ATEX	CML 17 ATEX 3111U	All IEC Ex certification data can be downloaded from www.cortemgroup.com	
	IEC Ex	CML 17.0051U		
Standards:	CENELEC EN 60079-0: 2012+A11:2013, EN 60079-31:2014 and EUROPEAN DIRECTIVE 2014/34/UE IEC 60079-0: 2011, IEC 60079-31: 2013			
Degree of protection:	IP66

IECEx Certificate

MECHANICAL FEATURES OF CONTROL DEVICES

Outer body:	Aluminium
Internal bush:	Stainless steel
Internal pin:	Stainless steel
Gaskets:	Acid/hydrocarbon-resistant silicone
Push-button:	Coloured nylon
Illuminated push-button:	Clear coloured polycarbonate
Handle levers:	Aluminium
Coating:	Polyester coating RAL 7035 (Light grey), where this is an option
Device mounting:	Screws into lid
Contact mounting:	Snap onto special flange, which assures quick connection of the whole contact block to the device or boxed type installed on DIN rails directly on the internal frame

ELECTRICAL FEATURES (Contact block for push-buttons)

Rated voltage:	600V
Rated current:	10A
Impulse withstand voltage:	4kV
Insulation category:	Group C as per VDE 0110
Degree of protection of terminals:	IP2x as per CENELEC EN 60529
Contact operation:	<ul style="list-style-type: none"> – slow acting – self-cleaning (wiping action) – NC contact forced opening – double movable bridge – four points of contact – double break
Contact resistance	≤ 25 mΩ as per IEC 255.7 category 3

Electrical performance

Rated thermal current I_{th} = 10 A

Operational limits as per IEC 947.5.1:

Category AC15								
Voltage U _e (V)	24	48	60	110	220	380	500	600
Current I _e (A)	10	10	10	6	3	2	1.5	1.2
Category DC13								
Voltage U _e (V)	24	48	60	110	220	300		
Current I _e (A)	2.5	1.5	1	0.22	0.27	0.2		

Operational limits as per IEC 947.5.1:

AC Heavy Duty	(A600)
DC Standard Duty	(Q300)

Short-circuit protection

16A gG time-delay fuses as per IEC 269.1 and 269.3

ELECTRICAL FEATURES (CONTACT BLOCK FOR M-0553.. HANDLES)

Alternating current

Series			10	16	20	32	40/63

Indicator light with 3W lamps (on request*),
12/240 Vac/dc.
Lens comes in choice of five colours.

Blue	M-0636/B
Yellow	M-0636/G
White	M-0636/I
Red	M-0636/R
Green	M-0636/V

* lamp	12V:	LAMPBA9S12V
	24V:	LAMPBA9S24V
	110V:	LAMPBA9S110V
	240V:	LAMPBA9S240V

Multi-LED indicators come with lenses in
different colours. Reliability with a LED
service life of 50,000 hours.

Blue	M-0612/3B..
Yellow	M-0612/3G..
Colourless	M-0612/3I..
Red	M-0612/3R..
Green	M-0612/3V..

Can be ordered in 4 possible voltages:
110 Vac/dc = **M-0612/..110**
12 Vac/dc = **M-0612/..12**
230 Vac = **M-0612/..230**
24 Vac/dc = **M-0612/..24**

Indicator light with one high-brightness LED,
for a consumption of 20 mA and estimated life
of around 50,000 hours.
LED in 5 colours available.
Complete with locknut.

Color	If (mA)	Vf Tip. (V)	Vf max. (V)

The Cortem certified ammeter and voltmeter are suitable for measuring electrical values when the situation demands the utmost accuracy. The internal faces featuring the measuring range scale are produced to the customer's specifications.

Ammeter	B-0140A
voltmeter	B-0140V

Maximum voltage:	600 V
Nominal frequency:	40 ÷ 60 Hz
Precision class:	1.5
Dissipated power:	1.1 VA (B-0140A) 3.0 VA (B-0140V)

Measurement range - Direct measurement:

0 ÷ 40 mA	0 ÷ 0.1 A
0 ÷ 60 mA	0 ÷ 1.5 A
0 ÷ 100 mA	0 ÷ 2.5 A
0 ÷ 250 mA	0 ÷ 5 A
0 ÷ 400 mA	0 ÷ 6 A
0 ÷ 600 mA	0 ÷ 15 A

Measuring range - With current transformer:

0 ÷ 2.5 mA	0 ÷ 50 A
0 ÷ 5 mA	0 ÷ 60 A
0 ÷ 10 mA	0 ÷ 75 A
0 ÷ 15 mA	0 ÷ 100 A
0 ÷ 20 mA	0 ÷ 150 A
0 ÷ 25 mA	0 ÷ 200 A
0 ÷ 30 mA	0 ÷ 300 A
0 ÷ 40 mA	0 ÷ 400 A

Product modifications and warranty

Cortem Group reserves the right, at its sole discretion, to make any modifications (at any time and without notice) in order to improve the functionality and performance of its products or meet technical and manufacturing requirements. The measurements and drawings of the products and their parts are indicative only and not binding, because they can be modified without notice.

The latest updated information, data and certificates of our products are available on www.cortemgroup.com web site.

All Cortem Group products are covered by warranty for a period of twelve months from the delivery date. For more information, refer to the "General Terms and Conditions of Sale" on www.cortemgroup.com web site.
