2026

Explosion-protected electrical equipment

To be sure to be safe.

The value of experience

The peculiarity of the Cortem Technology Group is the experience gained in more than 40 years of activity in the Ex field which results not only in the supply of simple Ex-products, but also in engineered and customized solutions.

It was established in 1968 with the acronym "Cor.tem" Costruzioni, Rappresentanze tecniche elettromeccaniche and immediately it specialized in the production of electrical equipment for areas with danger of explosion and fire.

During the '70s Italy and ENI agree to increase their

specialization in the processing of crude oil into finished products.

In the same years, Elfit company was founded in order to carry out some strategic processes internal to the company and to provide the market with complementary lighting products, such as connectors, cable glands, junction boxes.

Since the '90s, thanks to the acquisition of Fondisonzo, company, a competitor in the same market segment, Cortem became soon the technological point of reference for Italian explosion-protected equipment.

Design, Production and Installation

In addition to the on-going research in order to develop innovative products and the process of complying the products with international standards, great attention is addressed to the engineered and customized solutions. We design and manufacture all products internally, with different security methods such as 'Ex d', 'Ex e' increased safety and 'Ex de' mixed, 'Ex n' no sparking, using alloys and plastics of primary quality.

Considering our customers' needs, our R&D department studies the best solution valuating normative and market price issues, plant and security aspects.

Cortem production range can be summarized as follows:

1. Lighting fixtures for LED technology, fluorescent lamps, halogen lamps, sodium vapor, high pressure mercury vapor, metal halide, mixed light. Obstruction lighting fixtures, rechargeable hand-held lamps for tank inspection. Zone 1, 2, 21, 22.
2. Junction and pulling boxes, enclosures for power and control panels, grounding security systems for tankers. Zone 1, 2, 21, 22.
3. Control station, command and control operators, signals, electrical circuits and/or motive power switches, limit switches available in ten different models depending on the type of actuator used Zone 1, 2, 21, 22.

4. Plugs and Sockets up to 125A with disconnecting interlock switch. Zone 1, 2, 21, 22.

5. Ex-protected cable glands, fittings, flexible tubes for the realization of complete electrical systems.

6. Ex-protected switchgear and panel board according to customers' specification.

All our products are manufactured using only aluminum alloys with low copper content which assure a better and more secure mechanical strength and a longer life cycle. For the production of 'Ex e' enclosures are also used polyester resins and AISI 316 L stainless steel.

90% of our production are placed in the Oil & Gas sector both off-shore and on-shore, but also in chemical, pharmaceutical plants and in all those manufacturing areas where the presence of explosive atmospheres may occur such as grain silos, woodworks and paper mills.

Applications include the use of electricity to control a plant with, for example, electrical distribution panel boards, or to light entire areas of production processes.

We invest every year some of our resources to develop innovative products that meet the market needs in terms of cost savings, security and reliability.

Internal organization and territorial presence

We have specific internal departments to support technically tenders for the supply of projects worldwide.

The Area Managers and Project Managers look after the various stages of a supply such as the initial documentation for approval by customer, the monthly reports on the order progress, the testing and the readying of the final Vendor data book.

With more than 30 agencies, 90 distributors, 7 partners

and 3 production centers displaced, Cortem provides a local and qualified presence around the world.

For Cortem “displacing” does not means transferring facilities, resources and know-how in low cost Countries, but replicating a successful model of industrial organization in which environment safety, product quality, compliance with standards, technical and after-sales services are the basics of our corporate mission.

Quality, safety for people and environment

The recognized quality of our products and of our automated control manufacturing systems is one of the principles guiding Cortem Group activities in order to ensure people safety on plants and environment protection.

There's an internal control system of all the productive cycle.

The Quality System conforms to the requirements of UNI EN ISO 9001:2008.

Plant facilities and production procedures meet also the

international standard UNI EN ISO 14001:2004 for the Environmental Management System.

All our Ex-protected products are certified in accordance with the European standard ATEX and International regulation IEC Ex. Furthermore, it's ongoing their regulatory compliance to GOST TR CU standards for the Customs Union GOST TR CU.

Respecting these strict international construction rules, guarantees the safety of people and environment.

"No Fake" Project

During 2012, Cortem has started the project "No Fake". The guarantee of origin against the falsification of products provides the application of an adhesive sticker with a security hologram of a diameter of 2 cm.

The text "TESTED" and the alphanumeric code guarantee the authenticity of the product. Customers can verify the correctness of the alphanumeric code directly on Cortem web site www.cortemgroup.com.

Corporate Identity

We encourage and help the people enterprise within the value of meritocracy assessing the individual capacity.

We are constantly focused on carrying out an excellent product which meets market requirements allowing the Company to grow up.

The Pay Off "to be sure to be safe" represents our pride and passion for what we design and manufacture.

Alessandro Rossi , President

A guide to lighting and signalling catalogue

This catalog, dedicated to lighting and signalling, is organized in order to facilitate the search of products and all the related technical and commercial information.

It's divided into two chapters: one chapter dedicated to lighting and one chapter focused on signalling. The catalog shows a colored thumb index which group together products by the type of protection 'Ex d', 'Ex de', 'Ex e', 'Ex i' and 'Ex n'.

On the first page of each product, you will find the series, an image of the product and some structural and functional features.

On the next page, a more detailed description summarizes the main features and a sequence of icons help you to visualize the main application sectors.

A very important part lists the certification data: classification, zones of installation, marking, certificates available, compliance with standards, temperature and degree of protection.

In the next pages you can read: the mechanical and electrical properties, the selection table with the list of available models, the dimensional drawings, a table dedicated to accessories available upon request and spare parts and, finally, the photometric diagram.

How to order

To order a product without getting lost among the many codes which identify a lighting fixture and all its accessories, in every section you'll find a red box.

When ordering you must always indicate:

- the type of lighting fixture, for example:

- codes of accessories upon request with which you want complete the product: the bulb, the cable gland, the type of reflector, the protection guard etc. ... that you will find in the "Accessories and spare parts available on request" section.

Accessories, spare parts and maintenance operation

In the section “Accessories and spare parts available on request” are summarized the accessories available in order to complete the product and the spare parts for maintenance operations.

The icons in the “Key” indicate whether the item is an accessory, a spare part or both.

Please note that the maintenance operations of explosion-protected products must be carried out using only original parts of the manufacturer.

In case of use of non-original spare parts, the product certificate is no longer valid and it's possible that the ex-protection is no longer guaranteed.

One of the most important causes of risk of explosion, could be the wrong maintenance operations of ex-protected equipment.

The safety of equipment is granted over time by con-

tinuous application of maintenance plans, involving a series of activities that we list here below, and, most of all, by efficient personnel training:

- Familiarizing with the standards regulating the identification and classification of hazardous areas.
- Familiarizing with the standards regulating the protection methods of electrical equipment installed in the plant.
- Familiarizing with the applied protection methods.
- Familiarizing with the particular project stages as far as protection methods concerns.
- Recognizing the protection methods by marking labels.
- Identifying the components and spare parts used by the manufacturer.
- Familiarizing with the electrical and mechanical maintenance methods.
- Familiarizing with the tests prescribed for repaired electrical equipment.

Photometric files for lighting projects

Cortem Group provides, upon request, photometric files of its lighting equipment for lighting designs.

These files can be used with LITESTAR lighting design software for internal and external able to make simple and effective the job of lighting designers.

Entering the photometric files of the selected models along with architectural data, you obtain graphs, curves, installation diagrams and a virtual image with the real lighting effect.

The software, available in several languages , can be free downloaded from www.oxytech.it with the manual of use.

For more information, contact Cortem Sales Offices.

A little more...

For more information about the Ex-protected world and on the basis of lighting engineering please download from www.cortemgroup.com web site, Product section, Catalogs the following reference materials:

- Guide to the EX world - How to use the electrical equipment in areas with risk of explosion
- Basis of lighting engineering.

EV series Lighting fixtures for traditional and LED lamps

EV series lighting fixtures have been specially designed for use in the petrochemical and oil refining industries as they combine beauty and functionality along with high performance and simplicity in complete compliance with the technological requirements of the "Ex sector". The low copper content aluminium alloy, shockproof borosilicate glass and electro-polished stainless steel components make these lighting fixtures ideal for use in environments with corrosive atmospheric agents, salts and industrial pollution. Mechanical characteristics such as ceramic lamp holders with high heat resistance and insulating properties and acid-proof neoprene gaskets guarantee a long working life with little maintenance. Scheduled maintenance work involves simply cleaning the glass that, thanks to its IP66 protection, can be safely cleaned with a wet cloth. As specified in the appropriate installation standard (EN/IEC 60079-14), the entry to the fixture must be only through an Ex "barrier" cable gland (sealed) or, in the case of a conduit system, with an EYS, EZS sealing fittings.

ORIGINAL PRODUCT

MECHANICAL FEATURES

Body:	Low copper content aluminium alloy
Globe:	Shock and temperature resistant borosilicate glass with aluminium shade ring
Gaskets:	Silicone acid/hydrocarbon resistant
Guard:	Electro-polished stainless steel. Can also be supplied on request without a guard as the lighting fixture has passed the glass breakage test (4 Joule EN60079-0 / IEC60079-0)
Mounting:	See "EV series dimensional drawings"
Bolts and screws:	Stainless steel
Entries:	3/4" NPT threads
Coating:	Polyester coating Ral 7035 (Light grey)
Corrosion Resistance:	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

FHL series Portable inspection lamp

FHL series portable inspection lamps for compact 24/36 Watt fluorescent tubes have been specifically designed for carrying out inspection and maintenance work in all areas that are potentially explosive due to the presence of gases and dusts such as in the petrochemical industry, off-shore installations, tank control and processing areas. Thanks to their robust construction, they are easily handled and have a high degree of protection and optimal performance. They are also used in the naval sector for inspecting engine rooms and in the farming industry for checking the inside of silos. In general, these lamps are ideal for any application calling for a reliable source of light. Thanks also to the accessories which these lamps are fitted, they can be used in a wide variety of ways furthermore, thanks to the energy saving Philips master PL fluorescent tubes, the FHL series also provides an excellent colour rendering index in any position and operating temperature.

ORIGINAL PRODUCT

MECHANICAL FEATURES

Handle and heads:	Low copper content aluminium alloy
External tube:	Polycarbonate with excellent transparency and brilliance characteristics (in the visible light field with wavelengths of between 400 and 700µm, the uniform transmission is of about 89%). Exceptional shock and UV resistance, flame retardant.
Seal:	Silicone resin between the aluminium heads and the polycarbonate tube
Guard:	Electro-polished 316L stainless steel.
Gaskets:	Acid, hydrocarbon and high temperature resistant silicone
Bolts and screws:	Stainless steel
Hook:	Stainless steel
Entries:	1 x 1/2" NPT entry. Lighting fixture complete with NAV1NB cable gland for non-armoured cable
Coating:	Polyester coating Ral 7035 (Light grey)
Corrosion Resistance:	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

ELECTRICAL FEATURES

Lamp holder:	2G11 (4-pins)
Ballast:	Electronic, installed in the handle
Rated voltage:	24 Vdc
Connection:	Direct to the connectors fixed on the electronic board L, N, Pe max section 2.5 mm ²
Wiring:	Silicone rubber cables with glass braid protection against high temperatures

Ex e terminal housing

RLFE series Lighting fixtures for discharge lamps up to 400W

RLFE series lighting fixtures for discharge lamps are ideal for lighting large areas specifically in the chemical, on and off shore petrochemical industries. They are certified for use in Zones 1, 2, 21, 22 and comply with the 2014/34/UE directive. The body of the lighting fixture is made from low copper content aluminium alloy, the globe is made of borosilicate glass and has excellent thermal and mechanical properties. For this reason, the fixture can also be installed without a protective guard as specified in the relevant standards. In the RLFE series, the lamp and lamp holder are separated by a "chamber" housing the ballast and igniter that in turn are separated by a "Ex e" terminal box that is used to connect the lighting fixture to the power supply through a cable gland with an Ex (non barrier) seal as specified in EN/IEC 60079-14. The ease of access to the different "chambers" housing the electrical components means lower installation and maintenance costs and less wear and tear over time means a longer lifespan for the lamp.

ORIGINAL PRODUCT

MECHANICAL FEATURES

Body:	Low copper content aluminium alloy Fitted with cooling fins for better heat dissipation
Globe:	Shock and temperature resistant borosilicate glass sealed with aluminium shade ring
Gaskets:	Acid, hydrocarbon and high temperature resistant silicone
Guard:	Electro-polished stainless steel.
Bolts and screws:	Stainless steel
Entries:	2 x ISO M25 entries. Lighting fixture kit with PLG21B plug and NAV251B cable gland
Coating:	Polyester coating Ral 7035 (light grey)
Corrosion Resistance:	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

ELECTRICAL FEATURES

Lamp holder:	E27 or E40 ceramic
Ballast:	Electromechanical
Rated voltage:	230 V AC
Rated frequency:	50 Hz
Connection:	Direct connection to the terminal board L, N, Pe. Section 4mm ² , suitable for input/output
Power factor:	0.96
Wiring:	Silicone rubber cables with glass braid protection against high temperatures

- Optimal performance at high (+60°C) and low (-50°C) temperatures
- Easy to install, low maintenance costs
- Zone 1, 2, 21, 22

EVE series Lighting fixtures for traditional and LED lamps

EVE series lighting fixtures have been specially designed for use in the petrochemical and oil refining industries as they combine beauty and functionality along with high performance and simplicity in complete compliance with the technological requirements of the "Ex sector". The low copper content aluminium alloy, shockproof borosilicate glass and electro-polished stainless steel components make these lighting fixtures ideal for use in environments with corrosive atmospheric agents, salts and industrial pollution. Mechanical characteristics such as ceramic lamp holders with high heat resistance and insulating properties and acid-proof silicone gaskets guarantee a long working life with little maintenance. Scheduled maintenance work involves simply cleaning the glass that, thanks to its IP66 protection, can be safely cleaned with a wet cloth. Electrical connection is made via a terminal box in a "Ex e" compartment that allows the entry to the lighting fixture through an "Ex" O-ring (non barrier) cable gland as specified in the installation specification standards (EN/IEC 60079-14).

EVE series Lighting fixtures for traditional and LED lamps

ORIGINAL PRODUCT

MECHANICAL FEATURES

Body:	Low copper content aluminium alloy
Globe:	Shock and temperature resistant borosilicate glass with aluminium shade ring
Gaskets:	Acid/hydrocarbon resistant silicone
Guard:	Electro-polished stainless steel. Can also be supplied on request without a guard as the lighting fixture has passed the glass breakage test (4 Joule EN60079-0 / IEC60079-0)
Mounting:	See "EVE series dimensional drawings"
Bolts and screws:	Stainless steel
Entries:	See "EVE series dimensional drawings"
Coating:	Polyester coating Ral 7035 (Light grey)
Corrosion Resistance	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

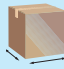

ELECTRICAL FEATURES

Lamp holder:	E27 or E40 ceramic
Rated voltage:	230 V AC
Rated frequency:	50/60 Hz
Connection:	Direct connection to the terminal box L, N, Pe. Section 4mm ²

XLF series XENON obstruction lighting fixtures

XLF series Xenon obstruction lighting fixtures are ideal for chimneys, towers, smokestacks, bell towers, buildings, cranes, bridges, radio/television masts, cable car and power line pylons, wind turbines, radar and telecommunication antennas and specifically for use in the petrochemical and oil industries. Their small size, light weight, ease of installation and robustness mean that XLF series lights do not deteriorate over time especially with exposure in salty environments. They are also resistant to the wind and the deposit of industrial dusts thanks to the low profile and aerodynamic properties of the body.

XLF series XENON obstruction lighting fixtures

ORIGINAL PRODUCT

MECHANICAL FEATURES

Body:	Low copper content aluminium alloy
Globe:	Shock and temperature resistant borosilicate glass sealed with aluminium shade ring
Coloured diffuser:	Polycarbonate
Gaskets:	Silicone acid/hydrocarbon resistant
Mounting:	See "XLF-1-2 series dimensional drawings"
Bolts and screws:	Stainless steel
Entries:	4 x 3/4" NPT threaded entries.
Coating:	Polyester coating Ral 7035 (light grey)
Corrosion Resistance:	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)

ELECTRICAL FEATURES

Lamp holder:	E27 ceramic
Lamp:	Stroboscopic (about 30 flash/min.) 6J or 16J Xenon with electronic module (for further information see "EC SERIES ELECTRONIC MODULE CHARACTERISTICS")
Rated voltage:	24 VAC/DC, 110 VAC, 230 VAC
Rated frequency:	50/60 Hz
Connection:	Direct to lamp holder L, N, Pe. Max section 4mm ² The double lighting fixtures (XLF-....2) comes supplied wired and sealed up to the junction box, the connection is made to the terminal board inside the terminal box L, N, Pe. Max section 4mm ²
Power factor:	0.96
Wiring:	Silicone rubber cables with glass braid protection against high temperatures

Features of EC series electronic modules.. for XLF

- **EC-05** Double XLF power supply circuit in which a 16J stroboscopic lamp is the main light and the other lamp is a spare.
Power supply: 230VAC
Stroboscopic power: 16 J
- **EC-10** Power supply unit for EC-... with 230 VAC power supply.
This unit has both automatic and manual controls as well as a test button.
- **EC-13** Fixed synchroniser that turns on all the stroboscopic lamps wired with a 230 VAC power supply at the same time.

- Continuous operation
- Ex d protection

Connection entry

ETH series acoustic signals

ETH series sirens are used in closed environments where a warning system is needed and where the atmosphere is potentially explosive. ETH sirens are multi-functional. The five different types of sound can be programmed to provide warning in the event of danger or evacuation in the case of fire.

- Output from 100 dB to 112 dB
- Ex d protection
- IP66

Entry for connection

ETH20MDLOU series Loudspeakers

The international standards for safety in industrial environments establish the mandatory installation of suitable audible warning device that can be activated in case of alarm, emergency or danger for the safety of workers which operate at the modern manufacturing processes. The explosion-proof loudspeakers ETH20MDLOUD series have been designed for use in potentially explosive atmospheres in presence of explosive gases and dusts. They have a high degree of protection (IP66) to withstand the harsh off-shore and on-shore plants environmental conditions. They are suitable for connection to standard amplification system with output 100V, to alarm systems and for public address.

The chamber of acoustic compression is separated from the outer atmosphere through a special filter of sintering.

They are equipped with a transformer offering the possibility to adapt and select the sound level according to the real needs of the installation point.

Application sectors:

Oil refineries

Chemical and petrochemical plants

Onshore plants

Waste water purification

Aircraft storage facilities
Hangars

Combustible liquid depots

Chrome coloured ABS plastic protection

ETS series Rotating electromechanical siren

ETS electromechanical sirens are used in potentially explosive environments such as oil refineries and chemical and petrochemical plants or in areas where flammable dusts or substances are present. Given the high level of sound they emit, they are used outdoors in industrial environments where there is significant background noise. They are used for different applications such as fire alarms, safety alarms, for emergencies and to signal plant evacuation and intrusion.

CSCPEA2

- Zones 1, 2, 21, 22
- Emergency alarm button
- Suitable for the start of alarm bell or siren

Break glass to activate button

CSCPEA2 Emergency alarm button

CSCPEA2 emergency alarm button with its glass protective cover is the ideal solution for setting off audible/visual alarms in the event of danger. The device comes complete with a hammer for breaking the glass. The emergency button is kept pressed by the actual glass. The contacts change when the glass is broken and the button is released automatically.

ORIGINAL PRODUCT

MECHANICAL FEATURES

Body and cover:	Low copper content aluminium alloy
Glass holder ring:	RAL3000 (Fire red) painted aluminium
Glass:	Transparent breakable glass
Hammer:	In brass with steel chain
Emergency button:	Resistant nylon
Gaskets:	Acid/hydrocarbon resistant NBR. For temperatures of -50°C, silicone gasket
Bolts and screws:	Stainless steel
Mounting:	Two 7x9.5 slots
Entries:	2 x 1" ISO 7/1 complete with type RE32G reduction from 1" to 3/4" ISO 7/1
Coating:	Epoxy coating Ral 7035 (light grey)
Corrosion Resistance:	The STANDARD of the aluminium alloy used by Cortem has passed the tests required by standards EN60068-2-30 (hot/humid cycles) and EN60068-2-11 (salt mist tests)
Contacts	
Contact operation:	low opening
Connection:	2 x 1.5 mm ² screw terminals
Torque setting:	0.8...1.2 N.m
Type of screw head:	Grooved, flat Ø 4 mm / Grooved, flat Ø 5.5 mm Star headed, Pozidriv No 1 / Star headed, Philips No 1
Contact material:	Silver alloy (Ag/Ni)

PVC handle grip

LED hand-lamp LHL-...P series

The hand-lamp LHL-...P series for LED tubes of 9/17 Watt have been designed for the work of inspection and maintenance in all those potentially explosive places for the presence of gas and dust as petrochemical industries, off-shore facilities, the areas of tank control and the process areas.

They are robust and easy to handle at the same time with a high degree of IP protection and excellent performance in light output.

The LED modules used for LHL-...P series hand-lamp allow to get an excellent color spectrum thanks to the type of light emitted by the LED.

Application sectors:

Oil refineries

Gas Chemical and petrochemical plants

Onshore plants

Offshore plants

Oil loading/unloading jetties

Fuel liquid depots

Fuel tanker loading/unloading areas

Perimeter lighting

L-3000P portable LED torch

The L-3000P torch has been designed to combine efficient lighting with user-selected operating time settings. It features high-performance LEDs, a new built-in dual optic system, a digital monitor showing battery status and a lighting management system, making it one of the most in-demand torch models in the industry.

The distinguishing feature of this torch is the option of controlling lighting based on individual user requirements: there are three different light output presets, allowing you to choose between a 5, 7.5 or 10 hour operating time. Held by hand or adapted in its holster, the rotating head provides versatility at all times while you are working. Its external clip means you can hang the torch off your belt, jacket or anything else, freeing up your hands.

Application sectors:

Oil refineries

Chemical and petrochemical plants

Agriculture and food plants

Offshore plants

Pharmaceutical industries

Powder magazines

Onshore plants

Fuel depots

L-3000P portable LED torch

*Impact resistance
and
mechanical strength*

Revolutionary optics

*Battery run time in
hours and minutes*

*0° / 45° / 90° rotating
head*

*Rechargeable
batteries*

FEATURES

Torch L-3000P

Body:

Thermoplastic resin with high impact strength and resistance to extreme temperatures and corrosive substances

LEDs:

3 x 150 lm LEDs (total light output 400 lm)

Front lens:

Shatterproof clear polycarbonate with built-in dual optics

Head:

Rotates to 3 positions: 0° / 45° / 90°

Operation:

Operating time of both LEDs can be set to 4, 6 or 8 hours:

- maximum light output > 5hrs
- maximum light output > 7,5h
- low light output > 10h

Operation monitoring:

Digital display located on rotating head indicating remaining hours and minutes of light

Operation test:

Warning given in the last 15 minutes when battery charge is running low

Switches:

Two ergonomically designed buttons made from a soft-touch material; oversized to ensure ease of use, even with gloved hands

Battery:

3.7V lithium ion battery; easy for user to replace

Battery charger:

Marking:

CE, e9

Protection:

IP54

Switch off:

Automatic end of charging

Charge indicators:

Red LED: charging

Green LED: batteries charged

Power supply:

CC: 12 V 24 V or AC: 100/240 V, 50/60 Hz

Types and dimensions:

Single: 76x131x57 mm

Battery charger for 3 torches: 205x105x60 mm

Battery charger for 5 torches: 405x105x60 mm

ACCESSORIES AVAILABLE / SPECIAL REQUESTS

Holster

Battery charger for 1, 3 or 5 torches

L-3000P portable LED torch

Code	Dimension mm		Light output	Light intensity	Discharge time	Weight kg
	L	Ø				
L-3000P	225	70	Tot. 400 lm	20.000 cd	Max. 10 ore	0,5

MODES

Switch on and maximum light intensity

Press button once.
LEDs are on, offering diffused light and a focussed beam all at once. At the same time, the display comes on, showing the remaining operating time.

Diffused light

Press button twice.
Only the LED located behind the optical diffuser is kept on, giving the light beam a wider angle.
The special design of the optics means the LED manages to even light the area underneath, near the user's feet.

Torch and display switch off

Press button thrice.

Strobe light

Menu button.
Holding the On|Off button down for four seconds sets the torch to strobe mode. Using the Menu button, you can select up to five different flashing rates.

Consumption map

Holding the Menu button down for 4 seconds activates programming mode for setting the torch's operating time and light output. Based on the 5, 7.5 or 10 hour setting, the electronics automatically adjust the light output level and consequently consumption levels.

L-5P and L-5RP portable LED torch

The L-5P hard hat torch and L-5RP rechargeable portable torch have been developed with the aim of reducing consumption and increasing light quality and output. To achieve this goal, we have fitted the torches with the latest generation LEDs and an automatic system to adjust light output based on input from a sensor. Designed mainly for use on hard hats and helmets, they are accessorized with fittings of various kinds, making them a valuable aid when used in conjunction with the L-3000P portable torch.
